

Contents

- Chapter 1 Introduction to Microfluidics 1**
 - Abstract..... 1
 - 1 Introduction to Microfluidics..... 2
 - 1.2 History of Microfluidics 3
 - 1.2.1 The beginning: Gas chromatography and capillary electrophoresis 3
 - 1.2.2 The microfluidic advantage 5
 - 1.2.3 Modular separation, reaction and hybridization systems 7
 - 1.2.4 Integrated systems 8
 - 1.3 Fluidics and Transport Fundamentals..... 10
 - 1.3.1 The continuum approximation..... 10
 - 1.3.2 Laminar flow 10
 - 1.3.3 Diffusion in microfluidic systems 12
 - 1.3.4 Surface forces and droplets..... 14
 - 1.3.5 Pumps and valves 16
 - 1.3.6 Electrokinetics 16
 - 1.3.7 Thermal management 18
 - 1.4 Device Fabrication..... 18

1.4.1 Materials	19
1.4.2 Fabrication and assembly	20
1.5 Biological Applications	21
1.5.1 Genetic analysis (DNA/RNA)	22
1.5.2 Proteomics	22
1.5.3 Cellular assays	23
1.5.4 Drug delivery and compatibility	24
1.6 The Future.....	26
1.6.1 Potential demand/market for microfluidic devices.....	26
1.6.2 Current products	27
1.6.3 Challenges and the future	28
References	29

Chapter 2 Materials and Microfabrication Processes for Microfluidic Devices

Abstract.....	35
2.1 Introduction	36
2.2 Silicon Based Materials	37
2.2.1 Micromachining of silicon.....	39
2.2.2 Bulk micromachining	39
2.2.3 Surface micromachining.....	46
2.3 Glass Based Materials.....	49
2.3.1 Microfabrication in glass	51
2.4 Wafer Bonding	56
2.4.1 Fusion bonding	57
2.4.2 Anodic bonding	57
2.4.3 Adhesive bonding	58
2.5 Polymers	59
2.5.1 Microfabrication	59
2.5.2 Polymer materials:	64
2.6 Conclusion	82
References	82

Chapter 3 Interfacing Microfluidic Devices with the Macro World..93

Abstract.....	93
3.1 Introduction	94
3.2 Typical Requirements for Microfluidic Interfaces	94
3.3 Review of Microfluidic Interfaces	95
3.3.1 World-to-chip interfaces.....	95
3.3.2 Chip-to-world interfaces.....	103
3.4. Future Perspectives	112
References	113

Chapter 4 Genetic Analysis in Miniaturized Electrophoresis

Systems.....	117
Abstract.....	117
4.1 Introduction	118
4.1.1 Status of genetic analyses	118
4.1.2 Genetic analysis by miniaturized electrophoresis system	119
4.2 Microchip Electrophoresis for Genomic Analysis.....	122
4.2.1 Material and fabrication of electrophoresis microchips	123
4.2.2 Theory of gel electrophoresis of DNA	125
4.2.3 Gel matrices.....	126
4.2.4 Novel DNA separation strategies on microchips.....	130
4.2.5 Surface coating methods for microchannel walls.....	134
4.3 Parallelization in Microchip Electrophoresis.....	137
4.4 Integration in Microchip Electrophoresis for Genetic Analysis ...	139
4.4.1 Sample preparation on microchip.....	139
4.4.2 System integration	141
4.5 Commercial Microfluidic Instruments for Genetic Analyses.....	144
4.5.1 Commercial microchip electrophoresis instruments for genetic analysis	145
4.5.2 Integrated microfluidic instruments for genetic analyses	147
4.6 Microfluidic Markets and Future Perspectives	150
References	151

Chapter 5 Microfluidic Systems for Protein Separations 165

Abstract.....	165
5.1 Introduction	166
5.1.1 Advantages of microfluidic chips for protein separations.....	166
5.1.2 Limitations of microfluidic chips in proteomics applications.....	167
5.1.3 Substrates used for proteomic analysis.....	167
5.2. Microfluidic Chips for Protein Separation.....	168
5.2.1 Microchip-based electrophoretic techniques	169
5.2.2 Microchip chromatography	172
5.3 Integrated Analysis in Microchips.....	175
5.3.1 Integration of sample preparation with analysis.....	175
5.3.2 Multi-dimensional separation in microchips	177
5.3.3 Chips integrated with mass spectrometry	180
5.4. Future Directions	180
References	181

Chapter 6 Microfluidic Systems for Cellular Applications..... 185

Abstract.....	185
6.1 Introduction	186
6.1.1 Physiological advantages.....	188

6.1.2 Biological advantages	189
6.1.3 Economical advantages	191
6.2 Microfluidic Technology for Cellular Applications	191
6.2.1 Microfluidic cell isolation/separation	191
6.2.2 Microfluidic cell culture	200
6.2.3 Microfluidic cell analysis	208
6.3 Commercialization of Microfluidic Technology	211
6.4 Concluding Remarks	214
References	215
 Chapter 7 Microfluidic Systems for Engineering Vascularized Tissue	
Constructs	223
Abstract:	224
7.1 Introduction	224
7.2 Generating 2D Vascularized Tissue Constructs Using Microfluidic Systems	226
7.3 Generating 3D Vascularized Tissue Constructs Using Microfluidic Systems	230
7.4 Hydrogel-based Microfluidic Systems for Generating Vascularized Tissue Constructs	232
7.5 Mathematical Modeling to Optimize the Microfluidic Systems for Generating Vascularized Tissue Constructs	235
7.6 Future Challenges	237
7.7 Conclusions	237
References	237
 Chapter 8 High Throughput Screening Using Microfluidics	241
Abstract	241
8.1 Introduction	242
8.2 Cell-Based Assays	244
8.2.1 High throughput cell culture	245
8.2.2 Cell sorting for high throughput applications	252
8.3 Biochemical Assays	254
8.3.1 PCR	254
8.3.2 Electrophoresis	255
8.3.3 Others	255
8.4 Drug Screening Applications	258
8.5 Users and Developers of μ F HTS Platforms	259
8.5.1 Users: Research labs, academic screening facilities, and pharmaceutical	260
8.5.2 Commercialized products in HTS	261
8.6 Conclusion	262

8.7 Acknowledgements	263
References	263

Chapter 9 Microfluidic Diagnostic Systems for the Rapid Detection and Quantification of Pathogens 271

Abstract.....	271
9.1 Introduction	272
9.1.1 Infectious pathogens and their prevalence.....	272
9.1.2 Traditional pathogen detection methods.....	274
9.1.3 Microfluidic techniques	276
9.2 Review of Research	277
9.2.1. Pathogen detection/quantification techniques based on detecting whole cells	277
9.2.2 Pathogen detection/quantification techniques based on detecting metabolites released or consumed.....	294
9.2.3 Pathogen detection/quantification through microfluidic immunoassays and nucleic acid based detection platforms.....	297
9.3 Future Research Directions.....	305
References	307

Chapter 10 Microfluidic Applications in Biodefense..... 323

Abstract.....	323
10.1 Introduction	324
10.2 Biodefense Monitoring	326
10.2.1 Civilian biodefense	326
10.2.2 Military biodefense.....	328
10.3 Current Biodefense Detection and Identification Methods	330
10.3.1 Laboratory detection.....	331
10.3.2 Field detection	332
10.4 Microfluidic Challenges for Advanced Biodefense Detection and Identification Methods.....	333
10.5 Microscale Sample Preparation Methods	335
10.5.1 Spore disruption.....	336
10.5.2 Pre-separations	336
10.5.3 Nucleic acid purifications.....	337
10.6 Immunomagnetic Separations and Immunoassays	339
10.6.1 Immunomagnetic separations.....	340
10.6.2 Immunoassays	341
10.7 Proteomic Approaches.....	345
10.8 Nucleic Acid Amplification and Detection Methods	346
10.8.1 PCR and qPCR detection of pathogens for biodefense	347
10.8.2 Miniaturized and Microfluidic PCR	348

10.8.3 Heating and cooling approaches.....	349
10.8.4 Miniaturized PCR and qPCR for biodefense.....	350
10.8.5 Other Nucleic acid amplification methods	351
10.9 Microarrays.....	352
10.9.1 Microarrays and microfluidics.....	353
10.10 Microelectrophoresis and Biodefense.....	354
10.10.1 Microelectrophoresis technologies	356
10.11 Integrated lab-on-a-chip systems and biodefense	358
10.11.1 Full microfluidic integration for biodefense.....	363
10.12 Summary and Perspectives	363
References	365
 Chapter 11 Current and Future Trends in Microfluidics within Biotechnology Research	 385
Abstract.....	385
11.1 The Past – Exciting Prospects.....	386
11.2 The Present – Kaleidoscope-like Trends	388
11.2.1 Droplet microfluidics.....	389
11.2.2 Integrating Active Components in Microfluidics	391
11.2.3 Third world - paper microfluidics – George Whitesides	394
11.2.4 Microfluidic solutions for enhancing existing biotechnology platforms.....	395
11.2.5 Microfluidics for cell biology – seeing inside the cell with molecular probes	400
11.2.6 Microfluidics for cell biology – high throughput platforms	401
11.3 The Future – Seamless and Ubiquitous MicroTAS	403
References	405
