

Contents

PART I. INTRODUCTION	1
1. Multibody Systems	3
1.1 Origins	3
1.1.1 Rise of Rotational Mechanics	3
1.1.2 Rotation in Technology	5
1.1.3 Status: mid-Twentieth Century	9
1.2 Multibody System Dynamics	11
1.2.1 Multibody Renaissance	11
1.2.2 Examples of Applications	13
1.2.3 Goals of Multibody System Investigation	21
1.2.4 Multibody Formalisms and Computer Codes	24
1.3 References	36
2. Mathematical Preliminaries	38
2.1 Terminology and Notation	38
2.1.1 Frames and Coordinates	38
2.1.2 Vectors and Cartesian Tensors	42
2.1.3 Matrices	45
2.1.4 Arrays of Vectors and Dyadics	46
2.2 Vectors, Dyadics and their Matrix Representations	47
2.2.1 Basic Operations	47
2.2.2 Transformations	50
2.2.3 Cartesian Tensors	53
2.3 References	56
PART II. KINEMATICS OF A RIGID BODY	57
3. Location and Orientation	59
3.1 Introduction	59
3.1.1 Degrees of Freedom	59
3.1.2 Rotation	61

3.2 Direction Cosine Matrices	63
3.2.1 Representation of General Rotation	63
3.2.2 Infinitesimal Rotation	67
3.3 Angle Representations of Rotation	68
3.3.1 Elementary Rotations	68
3.3.2 Euler Angles	70
3.3.3 Tait-Bryan Angles	73
3.4 Other Representations of Rotation	75
3.4.1 Euler Parameters	75
3.4.2 Euler-Rodrigues Parameters	77
3.4.3 Six-Parameter Methods	77
3.5 References	78
4. Velocity	79
4.1 Foundations	79
4.1.1 Translational Velocity	79
4.1.2 Angular Velocity	80
4.1.3 Velocity Variables	82
4.2 Angular Velocity and Parameter Derivatives	83
4.2.1 Angle Parametrizations	83
4.2.2 Euler and Euler-Rodrigues Parameters	84
4.3 Relative Derivatives	85
4.3.1 General Form	85
4.3.2 Transformations of Velocity and Acceleration	86
5. Kinematical Equations of Motion	89
5.1 Unconstrained Motion	89
5.1.1 Variables	89
5.1.2 Kinematical Differential Equations	90
5.2 Constrained Motion	93
5.2.1 Constraints	93
5.2.2 Modes of Motion	97
5.2.3 State Space Representation of Kinematics	103
5.2.4 Examples	104
5.3 References	125
PART III. DYNAMICS OF A RIGID BODY	127
6. Physical Preliminaries	129
6.1 Mass Geometry	129
6.1.1 Mass and Mass Moments	129
6.1.2 Transformations of the Inertia Matrix	132

6.2 Momentum	133
6.2.1 Linear Momentum	133
6.2.2 Angular Momentum	134
6.3 Force and Torque	136
6.3.1 Basics	136
6.3.2 Systems of Forces	139
6.4 References	141
7. Dynamical Equations	142
7.1 Basic Forms	142
7.1.1 Laws of Newton and Euler	142
7.1.2 Center of Mass as a Reference Point	143
7.2 Unconstrained Motion	144
7.2.1 Matrix Representation	144
7.2.2 Accelerated Reference Frames	147
7.2.3 State-Space Equations	150
7.2.4 Generalized Coordinates, Velocities and Forces	152
7.3 Constrained Motion	154
7.3.1 Separation of Forces and Torques by Modes	154
7.3.2 State Space Equations and Constraint Forces and Torques	155
7.3.3 Examples	157
7.3.4 Other Methodologies	166
7.4 References	172
PART IV. MULTIBODY SYSTEMS	173
8. Foundations	175
8.1 Basic Multibody Notation	175
8.1.1 Primitive Equations of Motion	175
8.1.2 Gross Motion and Reference Frames	177
8.1.3 Quantities Related to the Interaction of Bodies	181
8.2 Graph Characterization of System Topology	184
8.2.1 Graph Fundamentals	184
8.2.2 Matrices Associated with a Graph	188
8.2.3 Multibody System Graph	199
8.3 References	201
9. Formalisms	202
9.1 Survey on Methodologies	202
9.1.1 Eulerian Approaches	202
9.1.2 Lagrangian Approaches	208
9.2 Summary Description of Present Formalism	210

9.2.1 Reformulation of Primitive Dynamical Equations . . .	210
9.2.2 Selection of Dependent Variables	212
9.2.3 Data to Describe the System	214
9.2.4 Derivation of State Space Equations	221
9.3 References	227
10. Kinematics	229
10.1 Position	229
10.1.1 Formulation of Problems	229
10.1.2 Path Vectors	230
10.1.3 Barycentric Vectors	233
10.1.4 Unification of Results	239
10.1.5 Orientation Matrices	240
10.2 Velocity and Acceleration	241
10.2.1 Velocity	241
10.2.2 Velocity Derivatives	244
10.3 Constraint Equations	245
10.3.1 Classification of Constraints	245
10.3.2 Joint Constraints and Branch Orientation	248
10.3.3 Consistency Conditions in Kinematic Circuits . .	248
10.3.4 Circuit Connection Vectors	252
10.4 Kinematical Differential Equations	255
10.4.1 Unreduced System Equations	255
10.4.2 Incorporation of Constraints	256
10.5 References	258
11. Dynamics	259
11.1 Unreduced System Equations	259
11.1.1 Translation	259
11.1.2 Rotation	265
11.1.3 Generalized Inertia Dyadics	271
11.1.4 External and Inertial Forces and Torques	274
11.1.5 Matrix Equations	275
11.1.6 Properties of Generalized Inertia Matrix	282
11.1.7 Problem Types	284
11.2 Systems with Tree Structure	287
11.2.1 Separation by Modes	287
11.2.2 State Space Equations	289
11.2.3 Constraint Forces and Torques	291
11.3 Systems with Closed Circuits	292
11.3.1 Constraints across Primary Joints	292
11.3.2 State-Space Equations	293
11.3.3 Choice of Spanning Tree	298
11.4 References	300

12. Special Topics	301
12.1 Forces and Torques	301
12.1.1 Dry Friction	301
12.1.2 Interaction and Feedback Control	305
12.1.3 Gravitational Effects on Multibody Systems	307
12.2 Application to Robotics	311
12.2.1 Multibody Robot Models	311
12.2.2 Recursive Computation of Inverse Dynamics	317
12.3 References	328
13. Linearized Equations	329
13.1 Introduction	329
13.1.1 Collection of Basic Equations	329
13.1.2 Small Variables Representing Relative Motion	330
13.1.3 Absolute and Relative Motion	332
13.2 Kinematics	335
13.2.1 Unreduced Equations of Motion	335
13.2.2 Consistency Conditions	336
13.2.3 Constraint Equations	337
13.2.4 State-Space Equations	341
13.3 Dynamics	342
13.3.1 Introduction	342
13.3.2 Generalized Inertia Matrix	343
13.3.3 Interactions	344
13.3.4 External and Inertial Action	345
13.3.5 Matrices of Consistency Conditions	349
13.3.6 Unreduced System Equations	351
13.3.7 State-Space Representation	354
13.3.8 System Parameters	363
13.4 References	364
14. Computer Simulation	365
14.1 Introduction	365
14.1.1 Requirements on Multibody Software	365
14.1.2 General Organization of Programs	369
14.2 User-Oriented Input of Data	373
14.2.1 Generalities	373
14.2.2 System Data and Libraries	378
14.2.3 Feasibility of System Configuration	380
14.3 Generation of System Equations	381
14.3.1 Summary of Equations	381
14.3.2 Recursive Computational Schemes	387
14.3.3 Graph Algorithms	394

14.4 Numerical Integration	400
14.4.1 Formulation of Problems	400
14.4.2 Some Solution Techniques	402
14.4.3 Solution of Partially Reduced Equations	408
14.5 References	410
APPENDIX A. Notational Summary	412
APPENDIX B. List of Symbols	416
APPENDIX C. Bibliography	442
INDEX	455
