

Contents

1	Introduction	1
1.1	Some Examples	1
1.2	Astronomy and Computing	2
1.3	Programming Languages and Techniques	3
2	Coordinate Systems	7
2.1	Making a Start	7
2.2	Calendar and Julian Dates	11
2.3	Ecliptic and Equatorial Coordinates	13
2.4	Precession	16
2.5	Geocentric Coordinates and the Orbit of the Sun	22
2.6	The COCO Program	26
3	Calculation of Rising and Setting Times	33
3.1	The Observer's Horizon System	33
3.2	Sun and Moon	35
3.3	Sidereal Time and Hour Angle	36
3.4	Universal Time and Ephemeris Time	38
3.5	Parallax and Refraction	41
3.6	Rising and Setting Times	44
3.7	Quadratic Interpolation	45
3.8	The SUNSET Program	47
4	Cometary Orbits	55
4.1	Form and Orientation of the Orbit	55
4.2	Position in the Orbit	57
4.3	Mathematical Treatment of Kepler's Equation	61
4.4	Near-parabolic Orbits	64
4.5	Gaussian Vectors	67
4.6	Light-time	72
4.7	The COMET Program	73
5	Planetary Orbits	79
5.1	Series Expansion of the Kepler Problem	80
5.2	Perturbation Terms	83

5.3	Numerical Treatment of the Series Expansions	86
5.4	Apparent and Astrometric Coordinates	90
5.4.1	Aberration and Light-time	90
5.4.2	Velocities of the Planets	92
5.4.3	Nutation	95
5.5	The PLANPOS Program	97
6	The Orbit of the Moon	103
6.1	General Description of the Lunar Orbit	103
6.2	Brown's Lunar Theory	107
6.3	The Chebyshev Approximation	117
6.4	The LUNA Program	123
7	Solar Eclipses	127
7.1	Times of New Moon	127
7.2	Geometry of an Eclipse	131
7.3	Geographic Coordinates and the Flattening of the Earth	135
7.4	Duration of an Eclipse	138
7.5	Solar and Lunar Coordinates	139
7.6	The ECLIPSE Program	141
8	Stellar Occultations	151
8.1	Apparent Positions	152
8.2	Geocentric Conjunction	155
8.3	The Fundamental Plane	159
8.4	Disappearance and Reappearance	161
8.5	The OCCULT Program	163
9	Orbit Determination	173
9.1	Determining an Orbit from Two Position Vectors	173
9.1.1	The Sector-Triangle Ratio	174
9.1.2	Orbital Elements	177
9.2	The Geometry of Geocentric Observations	183
9.3	The Method of Successive Improvement	185
9.4	Multiple Solutions	187
9.5	The ORBDDET Program	188
10	Astrometry	197
10.1	Photographic Imaging	197
10.2	Plate Constants	200
10.3	Reduction	201
10.4	The FOTO Program	204

Appendix	211
A.1 Notes on Alterations to Suit Individual Computers	211
A.2 List of Procedures	215
A.3 Procedures to Calculate Heliocentric Planetary Positions	217
Symbols	237
Glossary	241
Bibliography	245
Subject Index	251
