PREFACE	vii
INTRODUCTION	xi
GLOSSARY	xiv
 1 THE MEMBRANE THEORY OF CYLINDRICAL SHELLS	 1
1.1 Equations of static equilibrium	1
1.2 Equations of dynamic equilibrium	8
1.3 Equations of deformation of the cylindrical shell	9
1.4 Solution of the natural vibration problem	14
1.5 Constraints of the membrane theory of cylindrical shells	31
References	35
 2 THE BENDING THEORY OF CYLINDRICAL SHELLS	 36
2.1 Introductory notes	36
2.2 Axisymmetrically loaded, cylindrical shells.	38
2.2.1 Equations of dynamic equilibrium	38
2.2.2 Membrane deformations	40
2.2.3 Bending strains	40
2.2.4 The total strain of the z-surface	42
2.2.5 The determination of unit forces and moments	43
2.2.6 The dependence of the radius of curvature on the elementary displacements	45
2.2.7 Unit forces and moments expressed with the help of elementary displacements	47
2.2.8 Derivation of the dynamic equation of compatibility	48
2.2.9 Solution of the dynamic equation of compatibility	49
2.3 The general deformation theory of thin cylindrical shells	58
2.3.1 Dynamic equations of equilibrium	60
2.3.1.1 Donnell—Mushtari's equations of motion	66
2.3.1.2 Love—Timoshenko's equations of motion	68
2.3.1.3 Flügge's equations of motion	68
2.3.1.4 Novozhilov—Goldenveizer's equations of motion	69
2.3.1.5 Reissner's equations of motion (identical with Naghdi's and Berry's [11] equations)	70
2.3.1.6 Vlasov's equations of motion	71
2.3.1.7 Sanders' equations of motion	72
2.3.1.8 Comments on the approximate theories	72
2.3.2 Boundary conditions	75

2.3.3	Solution of equations of motion of the cylindrical shell	78
2.3.4	Conclusions following from the bending theory of cylindrical shell vibration	82
2.3.4.1	The minimum eigenfrequency of shell vibration	85
2.3.4.2	The strain energy of thin shells	90
2.3.4.3	The influence of other boundary conditions upon the eigenfrequencies of the cylindrical shell	92
2.3.5	Comparison of various theories of thin, cylindrical shells	95
Appendix		96
References		100
3	ACCURATE EQUATIONS OF MOTION OF CYLINDRICAL SHELL VIBRATION	102
3.1	Solution of the equations of motion	105
3.1.1	The simplest boundary conditions	105
3.1.2	Mirsky's potential functions Φ and ψ	106
3.1.3	Determination of the potential functions Φ and ψ	106
3.2	The frequency equation	113
3.3	Comparison of the precise theory with Flügge's approximate theory	115
Appendix		117
References		119
4	THE THEORY OF DAMPED, TWO-LAYERED CYLINDRICAL SHELLS	120
4.1	Fundamental assumptions	120
4.2	Derivation of the equations of motion	121
4.2.1	Kagawa—Krokstad's equations	124
4.2.2	Modified equations of motion	126
4.2.3	Refined theory of two-layered cylindrical shells	128
4.3	Characteristics of damped vibrations of two-layered shells	130
4.3.1	Basic, axially symmetric modes of layered shells	131
4.3.2	Axisymmetric modes of layered shells	137
4.3.3	Axially asymmetric modes of layered shells	141
References		153
	ADDITIONAL BIBLIOGRAPHY ON SHELL VIBRATION	154
	INDEX	156
