Preface	vii
List of Figures	xxi
List of Tables	xxv

Part I: Product Design

Chapter 1: Product Development Life Cycle	3
1.1. Introduction	3
1.2. The Evolution of Product Development	3
1.3. Sequential Product Development	5
1.4. Simultaneous/Integrated Product Development	6
1.5. Generic Product Development Process	7
1.5.1. Needs Recognition	8
1.5.2. Design Specifications	11
1.5.3. Conceptual Design	13
1.5.4. Concept Generation	14
1.5.5. Concept Selection	15
1.5.6. Final Concept Preliminary Design	16
1.5.7. Detail Design	16
1.5.8. Component Final Design	17
1.5.9. Cost Estimation	17
1.5.10. Prototyping	17
1.5.11. Production	17
1.5.12. Marketing	18
1.6. Case Study-Needs Recognition: A Utility Snip	19
1.6.1. Overview	19
1.6.2. Objectives	20
1.6.3. Procedure	20

1.7. Summary	30
1.8. Problems	30
Chapter 2: Product Life Cycle Cost Model	31
2.1. Introduction	31
2.2. Role of Computers in Manufacturing Systems	33
2.3. Product Life Cycle Cost Analysis	33
2.3.1. Cost Breakdown in Manufacturing Systems	33
2.3.1.1. Total System Cost (C)	33
2.3.1.2. Advanced Research and Development (C_r)	34
2.3.1.3. Program Management (C_{rm})	34
2.3.1.4. Advanced Research and Development (C_{rr})	35
2.3.1.5. Engineering design cost (C_{re})	35
2.3.1.6. Equipment Development and Test (C_{rt})	35
2.3.1.7. Engineering Data (C_{rd})	36
2.3.1.8. Investment (C_i)	36
2.3.1.9. Manufacturing (C_{im})	36
2.3.1.10. Nonrecurring Manufacturing Cost (C_{in})	37
2.3.1.11. Recurring Manufacturing Cost (C_{ir})	37
2.3.1.12. Construction Cost (C_{ic})	38
2.3.1.13. Initial Logistic Support Cost (C_{il})	38
2.3.1.14. Operator Personnel Cost (C_o)	39
2.3.1.15. Operation Cost (C_{oo})	39
2.3.1.16. Operator Personnel Cost (C_{oop})	40
2.3.1.17. Operator Training Cost (C_{oot})	40
2.3.1.18. Operational Facilities Cost (C_{oof})	40
2.3.1.19. Support and Handling Equipment Cost (C_{ooe})	41
2.3.1.20. Maintenance Cost (C_{om})	42
2.3.1.21. Maintenance Personnel and Support Cost (C_{omm})	42
2.3.1.22. Corrective Maintenance Cost (C_{oou})	42
2.3.1.23. Preventive Maintenance Cost (C_{oos})	43
2.3.1.24. Spare/Repair Cost (C_{omx})	44
2.3.1.25. Test and Support Equipment Cost (C_{oms})	44
2.3.1.26. Transportation and Handling Cost (C_{omt})	45
2.3.1.27. Maintenance Training Cost (C_{omp})	46
2.3.1.28. Maintenance Facilities Cost (C_{omf})	46
2.3.1.29. Technical Data Cost (C_{omd})	47
2.3.1.30. System/Equipment Modification (C_{on})	47
2.3.1.31. System Phase-out and Disposal Cost (C_{op})	47
2.4. Computer-Aided Cost Estimating in Manufacturing	48
2.5. Objective of Cost Estimating	48
2.5.1. Assist in Submitting Bids	49
2.5.2. Revise Quotations	49

2.5.3. Assist in Evaluating Alternatives	49
2.5.4. Control of Manufacturing Expenses	49
2.5.5. Assist in Make or Buy Decisions	50
2.5.6. Establish Ground for a Selling Price	50
2.6. Methods of Cost Estimating	50
2.6.1. The Opinion Estimates Method	50
2.6.2. The Conference Estimating Method	50
2.6.3. The Comparison Method	51
2.6.4. The Unit Estimate Methods	51
2.6.5. The Cost and Time Relationship Method	51
2.6.6. The Power Law and Sizing Model Method	51
2.6.7. Probabilistic Approaches	52
2.6.8. Statistical Methods	52
2.6.9. Simulation	53
2.6.10. The Factor Method	53
2.6.11. The Detailed Computerized Method	53
2.7. Computer-Aided Cost Estimating	55
2.8. Structure of a Computer-Assisted Cost Estimating System	55
2.9. Summary	58
2.10. Problems	58

Part II: Feature-Based Design and Techniques

Chapter 3: Computer-Based Design and Features 61

3.1. Introduction	61
3.2. CAD and CAM Integration	62
3.2.1. The Role of CAD/CAM in Manufacturing	64
3.3. Feature-Based Technologies	66
3.3.1. Types of Features	68
3.4. The New Methodology Objectives	69
3.5. Problems	70

Chapter 4: Methodologies of Feature Representations 71

4.1. Feature Definitions	71
4.2. Features in Manufacturing	72
4.2.1. Process Planning	73
4.2.1.1. Variant Process Planning (VPP)	73
4.2.1.2. Generative Process Planning (GPP)	75
4.2.2. Assembly Planning	76
4.2.3. Inspection Planning	77
4.3. Geometric Data Format	77
4.3.1. Wireframe Modeling	78

4.3.2. Surface Modeling	78
4.3.2.1. Ferguson's Curve	80
4.3.2.2. Bezier's Curve	80
4.3.2.2.1. Properties of Bezier Curves	81
4.3.2.3. B-spline Curve	83
4.3.3. Solid Modeling	83
4.3.3.1. History and Overview	84
4.3.3.2. Types of Solid Modeling	85
4.4. Boundary Representation (B-rep)	88
4.4.1. Euler's Formula	90
4.5. Constructive Solid Geometry (CSG)	91
4.6. Advantages and Disadvantages of (CSG) and B-rep	94
4.7. Feature Recognition	95
4.8. Feature-based Design	96
4.9. What Are Feature Interactions?	97
4.10. Summary	98
4.11. Problems	99
Chapter 5: Feature Extraction Techniques	101
5.1. Feature Representation	101
5.1.1. Feature Representation by B-rep	102
5.1.2. Feature Representation by CSG	104
5.1.3. Feature Representation by B-rep and CSG (Hybrid Method)	104
5.2. Feature Recognition Techniques	105
5.2.1. The Syntactic Pattern Recognition Approach	106
5.2.2. The Logic-Based Approach	107
5.2.3. Graph-Based Approach	109
5.2.4. Expert System Approach	113
5.2.5. Volume Decomposition and Composition Approach	117
5.2.6. 3D Feature Recognition from a 2D Feature Approach	120
5.3. Summary	123
5.4. Problems	123
Chapter 6: Initial Graphics Exchange Specifications (IGES)	125
6.1. Data Transfer in CAD/CAM Systems	125
6.2. Initial Graphics Exchange Specifications (IGES)	126
6.2.1. Structure of the IGES File	127
6.2.1.1. Start Section	128
6.2.1.2. Global Section	128
6.2.1.3. Directory Entry Section (DE)	128
6.2.1.4. Parameter Data Section (PD)	129
6.2.1.5. Terminate Section	129

6.3. Summary	130
6.4. Problems	130
Chapter 7: Intelligent Feature Recognition Methodology	131
7.1. Introduction	131
7.2. Conversion of CAD Data Files to Object-Oriented Data Structure (OODS)	132
7.2.1. Basic IGES Entities	132
7.3. The Overall Object-Oriented Data Structure of the Proposed Methodology	137
7.3.1. Geometry and Topology of B-rep	142
7.3.1.1. Classification of Edges	143
7.3.1.2. Classification of Loops	143
7.3.2. Definition of the Data Fields of the Proposed Data Structure	145
7.3.3. Algorithms for Extracting Geometric Entities from a CAD File	147
7.3.3.1. Algorithm for Extracting Entries from Directory and Parameter Sections	147
7.3.3.2. Algorithm for Extracting the Basic Entities of the Designed Part	148
7.3.4. Extracting Form Features from CAD Files	157
7.3.4.1. An Example for Finding the Concave Edge/Faces	159
7.3.4.2. Algorithm for Determination of the Concavity of the Edge	159
7.3.4.3. Algorithm for Determination of the Concavity of the Loop	162
7.3.4.4. Algorithms for Feature Extraction (Production Rules)	164
7.4. Summary	178
7.5. Problems	178
Chapter 8: Feature Interaction Methodology	181
8.1. Feature Interaction	181
8.1.1. Intersecting Features	182
8.1.1.1. Merging Features that Can Be manufactured Concurrently	183
8.1.1.2. Example of Merging Features	184
8.1.1.3. Algorithms for Intersecting Features Extraction (Production Rules)	185
8.1.2. Compound Features	189
8.1.2.1. Concatenation of Features Procedure	191
8.1.2.2. Algorithms for Compound Features Extraction (Production Rules)	191
8.2. The General Algorithm for Extraction of Interacting Features	198

8.3. Summary	200
8.4. Problems	200

Part III: Feature-Based Process Planning and Techniques

Chapter 9: Mapping the Extracted Manufacturing Features to Process Planning	205
--	-----

9.1. Introduction	205
9.2. Machining Operations	205
9.2.1. Drilling Operations	205
9.2.2. Milling Operations	206
9.3. Machining Sequence Procedure	206
9.4. Machining Direction Procedure	207
9.5. Machining Information Procedure	209
9.6. Summary	213
9.7. Problems	213

Chapter 10: Intelligent Feature Recognition Methodology (IFRM) Implementation	215
--	-----

10.1. CAD Interface for the IFRM System	215
10.2. Feature Recognition Stage	216
10.3. Illustrative Example 1	219
10.4. Illustrative Example 2	225
10.5. Illustrative Example 3	237
10.6. Illustrative Example 4	256
10.7. Advantages of IFRM Methodology	273
10.8. Limitations of IFRM Methodology	274
10.9. Recommendations for Future Work	274
10.10. Summary	275
10.11. Problems	276

Part IV: Advanced Topics

Chapter 11: Rapid Prototyping	281
--------------------------------------	-----

11.1. Introduction	281
11.2. Benefits of Rapid Prototyping Technology	283
11.3. Rapid Prototyping Terminology	284
11.4. Rapid Prototyping Systems	285
11.4.1. Stereolithography (SLA)	285
11.4.1.1. Stereolithography Process Preparation	286
11.4.1.2. SLA Process	286

11.4.1.3. Advantages and Disadvantages of SLA	287
11.4.1.3.1. Advantages of SLA	287
11.4.1.3.2. Disadvantages of SLA	288
11.4.2. Solid Ground Curing (SGC)	288
11.4.2.1. SGC Process Preparation	288
11.4.2.2. SGC Process	288
11.4.2.3. Advantages and Disadvantages of SGC	290
11.4.2.3.1. Advantages of SGC	290
11.4.2.3.2. Disadvantages of SGC	290
11.4.3. Laminated Object Manufacturing (LOM)	291
11.4.3.1. LOM Process Preparation	291
11.4.3.2. LOM Process	291
11.4.3.3. Advantages and Disadvantages of LOM	293
11.4.3.3.1. Advantages of LOM	293
11.4.3.3.2. Disadvantages of LOM	293
11.4.4. Selective Laser Sintering (SLS)	293
11.4.4.1. SLS Process Preparation	294
11.4.4.2. SLS Process	294
11.4.4.3. Advantages and Disadvantages of SLS	294
11.4.4.3.1. Advantages of SLS	294
11.4.4.3.2. Disadvantages of SLS	296
11.4.5. Direct Shell Production Casting (DSPC)	296
11.4.5.1. DSPC Process Preparation	296
11.4.5.2. DSPC Process	297
11.4.5.3. Advantages and Disadvantages of DSPC	297
11.4.5.3.1. Advantages of DSPC	297
11.4.5.3.2. Disadvantages of DSPC	297
11.4.6. Fused Deposition Modeling (FDM)	299
11.4.6.1. FDM Process	299
11.4.6.2. FDM Support System	299
11.4.6.3. Advantages and Disadvantages of FDM	300
11.4.6.3.1. Advantages of FDM	300
11.4.6.3..2 Disadvantages of FDM	300
11.5. Summary	301
11.6. Problems	301
Chapter 12: Collaborative Engineering	303
12.1. Introduction	303
12.2. Product Design and Development Process	304
12.2.1. Integrated Product Development (IPD)	305
12.2.2. The Principles of IPD	305
12.3. Collaborative Engineering Approach	306
12.4. Role of Collaboration in IPD	307

12.5. Product Development Teams (PDTs) and Collocation	308
12.6. Effectiveness of PDT	309
12.7. Product Design in a Collaborative Environment	310
12.7.1. Collaborative Marketplace	311
12.7.2. Collaborative Approach	312
12.8. Integrated Product Design and Development in a Collaborative Environment	313
12.8.1. System Structure and Components	315
12.8.2. Collaborative Environment	316
12.8.3. Analysis Phase	317
12.8.4. Optimization Phase	318
12.8.5. Parametric CAD Modeling	319
12.8.6. Advantages of the System	319
12.9. Summary	320
12.10. Problems	320
References	323
Index	339
