PREFACE TO THE EXPANDED EDITION xvii
PREFACE TO THE ORIGINAL EDITION xix

CHAPTER 1: MULTIPLE LEARNING PROBLEMS ARE SOLVED BY SENSORY-MOTOR SYSTEMS 1

1.1. Introduction: Brain Designs Are Adaptive Designs 1
1.2. Eye Movements as a Model Sensory-Motor System 2
1.3. Intermodality Circular Reactions: Learning Gated by Comparison of Target Position with Present Position
A. Reciprocal Associative Transformations between Target Position Maps 5
B. Matching of Target Position with Present Position 5
C. Intermodality Map Learning is Gated by Intramodality Matching 5
D. Dimensional Consistency: Head Coordinate Maps 7
1.4. Learning a Target Position Map 7
A. A Many-to-One Transform 7
B. Map Invariance 9
C. A Multimodal Map 9
D. Error-Tolerance and Map Learning 9
E. Self-Consistent Map Learning 9
F. A Self-Regulating Map 11
1.5. From Multimodal Target Map to Unimodal Motor Map 11
1.6. Vector Maps from Comparisons of Target Position Maps and Present Position Maps 12
1.7. Automatic Compensation for Present Position: Code Compression 13
1.8. Outflow versus Inflow in the Registration of Present Position 13
1.9. Corollary Discharges and Calibration of Muscle Plant Contractions 15
1.10. Outflow-Inflow Pattern Matches and Linearization of Muscle Responses: Automatic Gain Control 16
1.11. Motor Vectors Calibrated by Visual Error Signals 17
1.12. Postural Stability: Separate Calibration of Muscle Length and Tension 18
1.13. Planned versus Reactive Movements: The Rear View Mirror Problem 19
1.14. Attentional Gating 21
1.15. Intermodality Interactions in a Head Coordinate Frame 21
1.16. Head Coordinate Maps Encode Predictive Saccades 23
1.17. The Relationship between Macrotheory and Microtheory 27

CHAPTER 2: PARALLEL PROCESSING OF MOVEMENT AND ERROR SIGNALS 31

2.1. Sensory-Motor Coordinates: Hemifield Gradients 31
2.2. Choice of Fixation Light: Network Competition 33
2.3. Correcting Fixation Errors: Competition Precedes Storage in Sensory Short Term Memory 33
A. Short Term Memory of the First Light 33
B. Competition Stage Precedes Sensory Short Term Memory Stage 35
2.4. Parallel Processing of Movement and Error Signals 35
2.5. Why Does A Saccade Generator Exist? 37
2.6. Competitive Choice and Storage in Short Term Memory 39
A. Shunting Interactions 40
B. Ratio Processing and Normalization of Spatial Patterns by Shunting On-Center Off-Surround Networks 40
C. Featural Noise Suppression: Adaptation Level and Pattern Matching 42
D. Receptive Fields, Spatial Frequencies, and Edges 44
E. Short-Term Memory, Feedback Competitive Networks, and Nonlinear Cross-Correlation 45
F. Signal Noise Suppression and Nonlinear Signals 45
G. Dynamic Control of Network Sensitivity: Quenching Threshold and Attentional Gain Control 46
H. Competitive Choice 48
I. Attentional Biasing and Competitive Masking 50

CHAPTER 3: SACCADIC LEARNING USING VISUAL ERROR SIGNALS: SELF-MOTION VERSUS WORLD-MOTION AND CEREBELLAR DYNAMICS 55

3.1. Compensation for Initial Position in the Movement Signal 55
3.2. Explicit versus Implicit Knowledge of Initial Position 55
3.3. Characterization of Correctable Errors 57
3.4. Self-Movement versus World-Movement: Ballistic versus Continuous Movement 61
3.5. A Universal Adaptive Gain Control Mechanism: Saccades, VOR, Posture, and Muscle Gain 64
3.6. Compatibility of Design Hypotheses 64
A. Perform and Test 65
B. Visual Invariance during Saccades 65
3.7. Different Coordinates for Unconditioned and Conditioned Movement Systems 65

A. Unconditioned Movements due to Prewired Connection Gradients 66
B. Conditioned Gain Control due to Visual Error Signals 66
C. Opponent Processing of Visual Error Signals 67
3.8. Correcting Undershoot, Overshoot, and Skewed Saccadic Errors 67
3.9. Curvature Distorting Contact Lens versus Inverting Contact Lens 69
3.10. Equal Access to Error Signals: Separate Anatomies for Unconditioned Movements and Conditioned Gain Changes 72
3.11. Anatomical Interpretation of the Adaptive Gain Stage: The Cerebellum 72
3.12. Superposition of Sampling Map and Error Signal Map: Logarithms and Bidirectional Parallel Fibers 74
3.13. Fractured Somatotopy and/or Bilateral Cerebellar Organization 77
3.14. More Constraints on Cerebellar Learning 79
3.15. Dual Action, Incremental Learning, and Error Signal Attenuation 79
3.16. Numerical Studies of Adaptive Foveation due to Cerebellar Gain Changes: Learned Compensation for System Nonlinearities 82
A. Purely Retinotopic Sampling 83
B. Invariant Target Position Map 85
C. Invariant Target Position Map Plus Retinotopic Map 85
D. Retinotopic Map Plus Eye Position Map 85
E. Noninvariant Target Position Map 88
F. Retinotopic Map Plus Initial Eye Position Map Plus Invariant Target Position Map 88
3.17. Shared Processing Load and Recovery from Lesions 88
3.18. Models of Saccadic Error Correction 90
A. Purely Retinotopic Sampling 97
B. Invariant Target Position Map 98
C. Invariant Target Position Map Plus Retinotopic Map 99
D. Retinotopic Map Plus Eye Position Map 99
E. Noninvariant Target Position Map 99
F. Retinotopic Map Plus Initial Eye Position Map Plus Invariant Target Position Map 100
3.19. Dynamic Coasting 100
3.20. Outflow-Inflow Comparisons: A Large Movement as a Series of Small Movement Segments 101
3.21. Mismatch due to Plant Nonlinearity or to Dynamic Coasting? 101
3.22. Adaptive Control of Dynamic Coasting 102

CHAPTER 4: COMPARING TARGET POSITION WITH PRESENT POSITION: NEURAL VECTORS 111

4.1. Reconciling Visually Reactive and Intentional Computations 111
4.2. Experimental Evidence for Vector Inputs to the Superior Colliculus 111
4.3. Adaptive Inhibitory Efference Copy in Motor Control 113
4.4. Multistage Elaboration of a Vector Map 115
4.5. Attention Modulation in Parietal Cortex and Inhibitory Gating of SC Signals: The Delay in Vector Subtraction 116
4.6. Stages in the Adaptive Neural Computation of a Vector Difference 120
A. Head-to-Muscle Coordinate Transform 120
B. Present Eye Position Signals: Corollary Discharges 121
C. Simultaneous Calibration of the Head-to-Muscle Transform and of the Vector Difference between Target Position and Eye Position 121
D. Visually-Mediated Gating of Vector Outputs 123
4.7. Modulators of Head-to-Muscle Coordinate Learning 124
4.8. Mathematical Design of the Head-Muscle Interface 126
4.9. Muscle Linearization and Retinotopic Recoding 128
A. Linearization of Muscle Response 129
B. Retinotopic Recoding 130
4.10. Saccade Staircases and Automatic Compensation for Present Position 131
4.11. Corrective Saccades in the Dark: An Outflow Interpretation 133

CHAPTER 5: ADAPTIVE LINEARIZATION OF THE MUSCLE PLANT 135

5.1. Fast Corrective Saccades versus Slow Muscle Linearization 135
5.2. Muscle Linearization Network 135
5.3. Cerebellar Direct Response Cells 139
5.4. Adaptation to Strabismus Surgery 140
5.5. Error Correction with and without Adaptive Gain Changes 142
5.6. Matching within the Outflow-Inflow Interface 142
5.7. An Explanation of the Steinbach and Smith Data 147
5.8. A Role for Golgi Tendon Organs in Muscle Linearization 148
5.9. Dynamic Linearization: Adaptive Sampling during Saccades 151
5.10. An Agonist-Antagonist Ratio Scale 151
5.11. Sampling from a Spatial Map of Outflow Position 153

CHAPTER 6: SPATIAL MAPS OF MOTOR PATTERNS 155

6.1. The General Problem: Transforming Pattern Intensities into Map Positions 155
6.2. Antagonistic Positional Gradients, Contrast Enhancement, and Coincidence Detectors 155
6.3. Position-Threshold-Slope Shift Maps 160
6.4. Self-Organizing Spatial Maps 167
6.5. Activity-Dependent Map Formation 170
6.6. Coding of Movement Length and Direction 172
6.7. Normalization of Total PTS Shift Map 172

CHAPTER 7: SACCADE GENERATOR AND SACCADE RESET 175

7.1. Saccade Generator 175
7.2. Converting an Intensity Code into a Duration Code 175
7.3. Summation of Retinotopic and Initial Eye Position Signals to the Saccade Generator 179
7.4. The Eye Position Update Network 179
7.5. Two Types of Initial Position Compensation: Eye Position Update and Muscle Linearization 180
7.6. Saccade Staircases 181
7.7. Circuit Design of the Eye Position Update Network 182
7.8. A Saccade Generator Circuit 184
7.9. Computer Simulations of a Saccade Generator Model 187
7.10. Comparison of Computer Simulations with Neural Data 189

CHAPTER 8: POSTURAL STABILITY AND LENGTH-TENSION REGULATION 193

8.1. Separate Postural and Movement Systems 193
8.2. Tension Equalization Network 194
8.3. Design of the Tension Equalization Network 194
8.4. Adaptive Step Gain and Pulse Gain: Correcting Post-Saccadic Drift 198
8.5. Relationship to the Vestibulo-Ocular Reflex 199
8.6. Cerebellar Functional Heterogeneity 201

CHAPTER 9: SACCADIC RHYTHM AND PREDICTIVE MOVEMENT SEQUENCES 203

9.1. Rhythmic Choices among Multiple Movement Sources 203

9.2. Distinguishing Correct Predictive Saccades from Incorrect Individual Saccades 204
9.3. The Temporal Control of Predictive Saccades 205
9.4. Storage of Temporal Order Information 206
A. Storage of Temporal Order, Target Match, and Memory Reset 206
B. Read-Out and STM Storage of a Target Choice 206
C. HMI Mismatch, Output Gate Closure, and Target Self-Inhibition 206
D. Read-Out, Reset, and STM Storage of Retinotopic Commands 207
E. LTM Printing 207
F. Match-Induced Reset of the TPM 207
9.5. Design of a Predictive Command Network 210
9.6. Saccade Generation by Predictive Commands 214
9.7. Two Types of Output Gates: Target-Driven Gates and Saccade-Driven Gates 217
9.8. Parietal Light-Sensitive and Saccade Neurons 218
9.9. Switching between Movement and Postural Eye Position Maps: Frontal Eye Field Control 220
9.10. Direct Computation of Predictive Difference Vectors from Stored Retinotopic Positions? 222
A. Getting Started 222
B. Vector Sign Reversal 224
C. Motor Recoding and Dimensional Inconsistency 224
D. Opponent Recoding and Linearity 224

CHAPTER 10: FORMATION OF AN INVARIANT TARGET POSITION MAP 227

10.1. Invariant Self-Regulating Multimodal Maps 227
10.2. Prewired Positional Gradients: The Mean Value Property 228
10.3. Self-Organizing Target Position Maps: Multimodal Sampling of a Unimodal Eye Position Map 232
10.4. Double Duty by Sampling Maps and their Neural Interpretation 233
10.5. Associative Learning at Autoreceptive Synaptic Knobs 234
10.6. Multimodal Learning of Invariant Self-Regulating Spatial Maps 237
10.7. Multimodal Learning of an Invariant Self-Regulating Target Position Map 245
10.8. Associative Pattern Learning 249

CHAPTER 11: VISUALLY REACTIVE, MULTIMODAL, INTENTIONAL, AND PREDICTIVE MOVEMENTS: A SYNTHESIS 253

11.1. Avoiding Infinite Regress: Planned Movements Share Reactive Movement Parameters 253
11.2. Learning and Competition from a Vector-Based Map to a Light-Based Map 254
11.3. Associative Pattern Learning and Competitive Choice: Non-Hebbian Learning Rule 256
11.4. Light Intensity, Motion, Attentional, and Multimodal Interactions within the Parietal Cortex 260
11.5. Nonspecific and Specific Attentional Mechanisms 263
11.6. Multiple Retinotopic Maps 264
11.7. Interactions between Superior Colliculus, Visual Cortex, and Parietal Cortex 266
11.8. Multiple Target Position Maps within Parietal Cortex and Frontal Eye Fields 269
11.9. Learning Multiply-Activated Target Position Maps 269
11.10. Multiple Parietal and Frontal Eye Field Vector Systems 273
11.11. Learning Neural Vectors and Adaptive Gains in a Predictive Movement System 275
11.12. Frontal Eye Field Control of Voluntary Saccadic Eye Movements and Posture: Cell Types 279
11.13. Coupled Vector and Adaptive Gain Learning 281
11.14. Gating of Learning, Movement, and Posture 282
A. Reading-In, Reset, and Storage of Movement Commands 284
B. Read-Out and Competition of Movement Commands 286
C. Gating of Posture and Learning 288
11.15. When Saccade Choice May Fail: Saccadic Averaging and Partial Vector Compensation 288

CHAPTER 12: ARE THERE UNIVERSAL PRINCIPLES OF SENSORY-MOTOR CONTROL? 291

CHAPTER 13: NEURAL DYNAMICS OF PLANNED ARM MOVEMENTS: EMERGENT INVARIANTS AND SPEED-ACCURACY PROPERTIES DURING TRAJECTORY FORMATION 293

Daniel Bullock and Stephen Grossberg

13.1. Introduction: Are Movement Invariants Explicitly Planned? 294
13.2. Flexible Organization of Muscle Groups into Synergies 296

13.3. Synchronous Movement of Synergies 296
13.4. Factoring Target Position and Velocity Control 298
13.5. Synchrony versus Fitts' Law: The Need for a Neural Analysis of Synergy Formation 299
13.6. Some General Issues in Sensory-Motor Planning: Multiple Uses of Outflow versus Inflow Signals 300
13.7. Neural Control of Arm Position Changes: Beyond the STE Model 305
13.8. Gradual Updating of PPC's during Trajectory Formation 306
13.9. Duration Invariance during Isotonic Movements and Isometric Contractions 309
13.10. Compensatory Properties of the PPC Updating Process 310
13.11. Target Switching Experiments: Velocity Amplification, GO Signal, and Fitts' Law 312
13.12. Velocity Profile Invariance and Asymmetry 314
13.13. Vector Cells in Motor Cortex 316
13.14. Learning Constraints Mold Arm Control Circuits 325
13.15. Comparing Target Position with Present Position to Gate Intermodality Learning 326
13.16. Trajectory Formation using DV's: Automatic Compensation for Present Position 327
13.17. Matching and Vector Integration during Trajectory Formation 329
13.18. Intentionality and the GO Signal: Motor Priming without Movement 331
13.19. Synchrony, Variable Speed Control, and Fast Freeze 333
13.20. Opponent Processing of Movement Commands 334
13.21. System Equations 336
13.22. Computer Simulation of Movement Synchrony and Duration Invariance 339
13.23. Computer Simulation of Changing Velocity Profile Asymmetry at Higher Movement Speeds 339
13.24. Why Faster-than-Linear or Sigmoid Onset Functions? 342
13.25. Computer Simulation of Velocity Amplification during Target Switching 345
13.26. Reconciling Staggered Onset Times with Synchronous Termination Times 345
13.27. Computer Simulation of the Inverse Relation between Duration and Peak Velocity 348
13.28. Speed-Accuracy Trade-off: Woodworth's Law and Fitts' Law 352
13.29. Computer Simulation of Peak Acceleration Data 355
13.30. Updating the PPC using Inflow Signals during Passive Movements 356
13.31. Concluding Remarks 359
Appendix 1: Bell-Shaped Velocity Profile, Fitts' Law, and Staggered Onset Times 360

Appendix 2: Synchrony and Duration Invariance 365
Appendix 3: Passive Update of Position 367

CHAPTER 14: A COMPARATIVE ANALYSIS OF NEURAL MECHANISMS, RECENT DATA, AND ALTERNATIVE MODELS 371

Stephen Grossberg

14.1. Comparative Analysis of Neural Models 371
14.2. Comparative Analysis of Movement Vectors in Eye and Arm Movements 372
14.3. Map Vectors and Difference Vectors 372
14.4. Vector Integration to Endpoint and GO Signal Modulation in Arm Movement Control 373
14.5. GO Signal Generator in Globus Pallidus 374
14.6. Factorization of Position and Velocity Control 375
14.7. Amplification of Peak Velocity and a GO Signal Test 375
14.8. Prediction and Test of Cells that Multiplex a Code for Local Velocity 376
14.9. Learning an Associate Map between Target Position Maps of the Eye-Head and Hand-Arm Movement System 378
14.10. Visually Reactive Movements and the Vector Map Code within Superior Colliculus 379
14.11. Three Interacting Coordinate Systems: Retinotopic, Motor Sector, and Map Vector 379
14.12. Automatic Gain Control of Movement Commands by Visual Error Signals: Cerebellar Learning 380
14.13. Learning a Motor Synergy: Opponent Processing of Error Signals 380
14.14. The Equal Access Constraint 381
14.15. The Vector-to-Sector Transform: Dimensional Consistency of Planned Vectors and Reactive Retinotopic Commands 382
14.16. Movement Gating, Intermodal Mapping, and Compensation between Planned and Reactive Movements 383
14.17. Data and Models of Posterior Parietal Target Positions Coded in Head-Centered Coordinates 384
14.18. Parallel Maps of Eye Position: An Application of Competitive Learning to Gaussian and Linear Teaching Vectors 385
14.19. Back Propagation Model of Target Position: Comparison with Competitive Learning 386
14.20. Comparison of Mammalian and Anuran Head and Vector Representations 389

14.21. The Transformation from Head-Centered Eye Movement Maps to Body-Centered Arm Movement Maps: Neck Corollary Discharges as a Map Teaching Signal 390
14.22. Transformation from Auditory Maps to Visually-Activated Eye Movement Maps 391
14.23. A Related Model of Auditory-to-Visual Transformation: Neuronal Group Selection 392
14.24. Predictive Saccades and Saccade Sequences: The LTM Invariance Principle 392
14.25. Comparison of Saccade Generator Models 393
14.26. Applications of the Model's Circular Reaction to Eye-Hand Coordination by an Adaptive Robot 394
