PREFACE *x*

TO THE READER *xiii*

I FORMULATIONS

||1|| MATHEMATICAL MODELS AND THE COMPUTER 3

- 1.1. Models, Simulation, and Problem Solving 3
- 1.2. Direct and Inverse Systems Problems 4
- 1.3. Modeling Methodology 6
- 1.4. Classes of Mathematical Models 8
- 1.5. The Evolution of Modeling and Simulation 10
- 1.6. Supercomputers and Microcomputers in Field Simulation 13
- Suggestions for Further Reading 15

||2|| THE PHYSICAL BASIS FOR PARTIAL DIFFERENTIAL EQUATIONS CHARACTERIZING FIELDS 17

- 2.1. Introduction 17
- 2.2. Unifying Concepts 18
- 2.3. Procedure for Deriving the Characterizing Equations 23

- 2.4. Elliptic Partial Differential Equations: Laplace's Equation 26
- 2.5. Elliptic Partial Differential Equations: Modified Forms 32
- 2.6. Elliptic Partial Differential Equations: General Properties and Applications 34
- 2.7. The Laplacian in Curvilinear Coordinate Systems 37
- 2.8. Parabolic Partial Differential Equations: Basic and Modified Forms 38
- 2.9. Parabolic Partial Differential Equations: General Properties and Applications 43
- 2.10. Hyperbolic Partial Differential Equations: The Wave Equation 45
- 2.11. Hyperbolic Partial Differential Equations: The Damped Wave Equation 47
- 2.12. Biharmonic Equations 49
- 2.13. Summary 50
 - Suggestions for Further Reading 52
 - Exercises 52

|| 3 || **POSING THE MATHEMATICAL PROBLEM** 58

- 3.1. Introduction 58
- 3.2. Linear and Nonlinear Equations 58
- 3.3. Initial and Boundary Conditions 60
- 3.4. Eigenvalue Problems 64
- 3.5. Variational Formulations 67
- 3.6. Well-posed and Ill-posed Problems 73
 - Suggestions for Further Reading 75
 - Exercises 75

II TRANSFORMATIONS

|| 4 || **FINITE DIFFERENCE APPROXIMATIONS** 81

- 4.1. Introduction 81
- 4.2. Discrete Representation of Variables, Functions, and Derivatives 82
- 4.3. A Model Problem 86
- 4.4. Accuracy of Approximations 88
- 4.5. Higher-Order Difference Approximations 92
- 4.6. Treatment of Normal Derivative Boundary Conditions 94
- 4.7. Treatment of Curved and Irregular Boundaries 97
- 4.8. Use of Graded Grids 100
- 4.9. Difference Approximations in Polar Coordinates 101
- 4.10. Difference Approximations Using Differentiation Matrixes 103
- 4.11. Review of Some Basic Ideas from Functional Analysis 105
 - References 106
 - Exercises 106

|| 5 || **BOUNDARY VALUE PROBLEMS** 109

- 5.1. A General Boundary Value Problem *109*
- 5.2. The Self-Adjoint Property *111*
- 5.3. Discretizing a Self-Adjoint Problem *113*
- 5.4. Difference Approximations Using Integration Method *114*
- 5.5. Integration Method in Higher Dimensions *118*
- 5.6. Difference Approximations Using Variational Method *122*
- 5.7. Solving the System $\mathbf{Au} = \mathbf{b}$ *125*
- 5.8. Other Methods of Solving Elliptic Equations *125*
- References *135*
- Suggestions for Further Reading *135*
- Exercises *136*

|| 6 || **INITIAL VALUE PROBLEMS** 139

- 6.1. General Formulation of the Initial Value Problem *139*
- 6.2. An Explicit Method for Diffusion Equations *140*
- 6.3. Consistency, Accuracy, Efficiency, and Stability *145*
- 6.4. Implicit Methods for the Diffusion Equation *150*
- 6.5. Explicit Methods for the Advective Equation *158*
- 6.6. Dispersion and Diffusion on a Difference Grid *161*
- 6.7. Conservation on a Difference Grid *162*
- 6.8. Conservative Methods for Hyperbolic Equations *164*
- 6.9. Method of Lines for Initial Value Problems *167*
- Suggestions for Further Reading *171*
- Exercises *171*

|| 7 || **SPECIAL TOPICS** 175

- 7.1. Introduction *175*
- 7.2. Singularities *175*
- 7.3. Interfaces, Moving Boundaries, and Free Surfaces *180*
- 7.4. Nonlinearities *184*
- References *191*
- Suggestions for Further Reading *191*
- Exercises *192*

|| 8 || **INTERPOLATION AND APPROXIMATION** 193

- 8.1. Introduction *193*
- 8.2. The Approximation Problem *193*
- 8.3. Piecewise Lagrangian Interpolation *195*

- 8.4. Piecewise Hermitian Interpolation 203
- 8.5. Interpolation with Polynomial Splines 205
- 8.6. Interpolating Functions of Several Variables 209
- Suggestions for Further Reading 223
- Exercises 224

|| 9 || **THE FINITE ELEMENT METHOD** 229

- 9.1. Introduction 229
- 9.2. Variational Formulation of the Finite Element Method 230
- 9.3. Method of Weighted Residuals 247
- 9.4. Galerkin Formulation of the Finite Element Method 251
- 9.5. Time-Dependent Field Problems 256
- 9.6. A Comparison of Finite Difference and Finite Element Methods 261
- 9.7. Finite Element Treatment of Sources 266
- 9.8. Treatment of Curved Boundaries 268
- References 270
- Suggestions for Further Reading 271
- Exercises 271

III COMPUTATIONS

|| 10 || **COMPUTATIONAL LINEAR ALGEBRA** 275

- 10.1. Introduction 275
- 10.2. Direct Methods of Solving $\mathbf{Au} = \mathbf{b}$ 276
- 10.3. Iterative Methods 288
- 10.4. Direct versus Iterative Methods 297
- 10.5. Variational Methods 298
- Suggestions for Further Reading 300
- Exercises 301

|| 11 || **SOFTWARE PACKAGES FOR PARTIAL DIFFERENTIAL EQUATIONS** 305

- 11.1. Introduction 305
- 11.2. General-Purpose Higher-Level Languages 307
- 11.3. Software Systems for Elliptic Partial Differential Equations 315
- 11.4. Software Packages for Parabolic and Hyperbolic Partial Differential Equations 318
- 11.5. Special-Purpose Packages for Implementing the Finite Element Method 326

- 11.6. Role of Symbolic Computation in the Development of Numerical Software 327
 References 331
 Exercises 332

||12|| TRENDS IN COMPUTER HARDWARE AND THEIR IMPACT ON FIELD SIMULATION 334

- 12.1. Introduction 334
 12.2. The Von Neumann Architecture 336
 12.3. Multiple Processing Elements 340
 12.4. Pipelining 342
 12.5. The ILLIAC IV: Arrays of Processing Elements 345
 12.6. STAR-100, ASC, and CRAY-I: Vector Processors 348
 12.7. AP-120B and AD-10: Peripheral Array Processors 354
 12.8. Networks of Microprocessors 358
 References 359
 Exercises 360

||13|| EXAMPLE PROGRAMS: FINITE DIFFERENCE METHODS 362

- 13.1. Introduction 362
 13.2. Example 1: A Linear Hyperbolic PDE 366
 13.3. Example 2: The ADI Method for a Two-Dimensional Parabolic PDE 370
 13.4. Example 3: Flow Around a Cylinder by an SOR-Type Method 378
 13.5. Example 4: Steady-State Navier-Stokes Problem 383
 References 409
 Suggestions for Further Reading 409
 Exercises 410

||14|| EXAMPLE PROGRAMS: FINITE ELEMENT METHOD 412

- 14.1. Introduction 412
 14.2. Division of the Domain into Finite Elements 413
 14.3. Selection of the Approximating Polynomial 414
 14.4. Labeling the Nodes 414
 14.5. Preparation of Input Data 416
 14.6. Assembly 429
 14.7. Solution of Equations 430
 14.8. Potential Flow Problem 430
 Suggestions for Further Reading 440
 Exercises 440
