Preface	v
Chapter 1. Basic Equations of the Theory of Thermal Stresses	
<i>by Richard B. Hetnarski</i>	1
1. Introduction	2
2. Heat conduction equation	2
3. Basic equations of thermal stresses	4
4. Displacement formulation and stress formulation	7
5. Stress-free thermoelastic problems	9
6. Variational principles	10
7. Reciprocal theorem	13
8. Thermoelastic potential	15
9. Two-dimensional problems	17
References	20
Chapter 2. Thermal Stresses in Plates – Statical Problems	
<i>by Theodore R. Tauchert</i>	23
1. Introduction	24
2. Classical plate theory	25
3. Rectangular plates	37
4. Circular plates	45
5. Influence function approach	49
6. Approximate solutions	54
7. Anisotropic and heterogeneous plates	60
8. Analysis of thick plates	90
9. Large deflections and thermoelastic stability	100
10. Additional topics	130
References	137
Chapter 3. Anisotropic Thermal Stress Analysis	
<i>by Joseph Padovan</i>	143
1. Introduction	144
2. Analysis of deformation	145
3. Analysis of stress	157
4. Physical laws	165
5. Constitutive relations	175
6. Analytical solution procedures	207
7. Finite-element analysis	247
References	259

Chapter 4. Criteria for the Thermal Stress Failure of Brittle Structural Ceramics	
by <i>D.P.H. Hasselman and J.P. Singh</i>	263
1. Introduction	264
2. Criteria for optimum thermal stress resistance	266
3. Derivation of figures-of-merit	267
4. General comments on figures-of-merit	285
5. Experimental	287
6. Final comments	295
Acknowledgement	295
References	296
Chapter 5. Thermal Stresses in Welding	
by <i>Lennart Karlsson</i>	299
1. Introduction	300
2. Welding methods and welding metallurgy	301
3. Experimental analysis	308
4. Theoretical analysis	312
5. Hot cracking	365
6. Annealing and reheat cracking	373
7. Concluding remarks	384
Acknowledgements	385
References	385
Chapter 6. Thermal Stresses in Materials with Temperature-Dependent Properties	
by <i>Naotake Noda</i>	391
1. Introduction	392
2. Equations of thermoelasticity	392
3. Conditions for zero thermal stress	397
4. Incompressible elastic solids	401
5. Circular cylinders	407
6. Spheres	429
7. Three-dimensional problems	439
8. Transverse isotropy	447
9. Thin plates	455
10. Finite thermoelastic deformations	461
11. Thermal stresses in inelastic materials	466
References	476
Chapter 7. On Some Three-Dimensional Thermal Stress Problems in Industrial Applications	
by <i>Yojiro Takeuti</i>	485
1. Basic relations of three-dimensional thermoelasticity	486
2. Three-dimensional heat conduction in cylindrical coordinates	492
3. Three-dimensional transient thermal stresses in a finite cylinder due to an arbitrary heat supply	494
4. Transient thermal stresses in rolls under rotating partial heat source	506
5. Axisymmetric thermal stress problems	511
6. Unsteady thermal stresses in a disk brake	517
7. Three-dimensional coupled thermal stress problems	519
8. Three-dimensional thermal stress problems in spherical coordinates	529
9. Coupled thermal stress problem in a finite circular cylinder	533
References	534
List of symbols for Chapter 4	537
Author index	539
Subject index	545
