

Table of Contents

INTRODUCTION

1 BASIC RADIO PRINCIPLES

1.1 Theory and Definitions | 1-1

1.2 Electrical Current | 1-1

1.3 Electromagnetism | 1-2

1.4 Wave Terminology | 1-2

1.5 Radio Wave Formula | 1-3

1.6 The Radio Spectrum | 1-4

1.7 Attenuation | 1-5

1.8 Polarisation | 1-5

1.9 Phase Difference | 1-7

1.10 Combined Signals | 1-7

1.11 Modulation | 1-8

1.12 Types of Emission | 1-12

1.13 Antennas | 1-13

1.14 Polar Diagrams | 1-15

1.15 Propagation of Radio Waves | 1-20

1.16 Doppler Principles | 1-28

2 VHF DIRECTION FINDING

2.1 Principle of Operation | 2-1

2.2 VDF Approach | 2-4

2.3 Range and Errors | 2-6

3 NDB AND ADF

3.1 NDB - Principle of Operation | 3-1

3.2 ADF Principle of Operation | 3-3

3.4 NDB Navigation | 3-11

3.5 NDB and ADF - Limitations and Accuracy | 3-20

4 VOR AND DOPPLER VOR

4.1 Principle of Operation | 4-1

4.2 Ground Installation | 4-2

4.3 Airborne Equipment | 4-5

4.4 VOR Navigation | 4-14

4.5 Limitations and Accuracy | 4-20

4.6 VOT | 4-23

5 DISTANCE MEASURING EQUIPMENT (DME)

5.1 The Purpose of the Equipment | 5-1

5.2 Basic Principle | 5-1

5.3 Selection of Correct Replies | 5-3

5.4 Frequency Pairing | 5-8

6 INSTRUMENT LANDING SYSTEM (ILS)

6.1 Principle of Operation | 6-1

6.2 Localiser | 6-2

6.3 Glide Path | 6-5

6.4 Use of ILS | 6-20

6.5 SCAT – I (Special Category I System) GPS Assisted Approach | 6-25

7 MICROWAVE LANDING SYSTEM (MLS)

7.1 Introduction | 7-1

7.2 Ground Installation | 7-2

7.3 Airborne Equipment | 7-4

7.4 Accuracies | 7-5

8 RADAR PRINCIPLES

8.1 Principle of Operation | 8-1

8.2 Radar Performance | 8-10

8.3 Secondary Radar | 8-10

9 GROUND RADAR

9.1 Surveillance Radar | 9-1

9.2 Airfield Surface Movement Radar (SMR) | 9-4

10 SECONDARY SURVEILLANCE RADAR (SSR)

10.1 Principles | 10-1

10.2 Use of Transponder | 10-4

10.3 Presentation and Interpretation | 10-6

10.4 Limitations | 10-6

10.5 Operation of Mode S (Selective Addressing) | 10-7

11 AIRBORNE WEATHER RADAR (AWR)

11.1 Use | 11-1

11.2 Working Principle | 11-1

11.3 Antenna Scanner and Beam | 11-1

11.4 Display, Iso-Echo Contour and Colours | 11-3

11.5 Tilt Management | 11-5

11.6 Precautions | 11-5

11.7 General Radar Display Information | 11-5

11.8 Sensitivity Time Control (STC) | 11-5

11.9 Path Attenuation Correction (PAC) | 11-6

11.10 Ground Clutter Suppression (GCS) | 11-6

11.11 Gain Control | 11-6

11.12 Control Display Unit | 11-6

11.13 Clear Air Turbulence (CAT) | 11-8

11.14 Interpretation of Display | 11-8

12 GLOBAL NAVIGATION SATELLITE SYSTEMS (GNSS)

12.1 NAVSTAR-GPS. Basic Principle of Operation | 12-1

12.2 The GPS System | 12-3

12.3 Errors and Factors Affecting Accuracy | 12-14

12.4 Ground-Based Augmentation Systems (GBAS) | 12-17

12.5 Satellite Based Augmentation Systems (SBAS) | 12-21

12.6 Airborne Based Augmentation Systems (ABAS) | 12-23

12.7 GLONASS | 12-24

12.8 Galileo | 12-27

12.9 COMPASS (Beidou) (not in LO's yet) | 12-31

12.10 eLoran | 12-32

13 AREA NAVIGATION SYSTEMS

13.1 Introduction | 13-1

13.2 Area Navigation Concepts | 13-3

13.3 RNAV Accuracy and Applications | 13-5

13.4 Principles of 2D RNAV, 3D RNAV & 4D RNAV | 13-5

13.5 Basic RNAV | 13-5

13.6 Required Navigation Performance (RNP) | 13-9

13.7 System Functions - RNAV Equipment | 13-12

13.8 Navigation Computer | 13-13

13.9 Flight Management Systems (FMS) | 13-15

13.10 Control and Display Unit (CDU) | 13-20

13.11 The Flight Management Computer (FMC) | 13-22

13.12 CDU and FMC Terminology | 13-25

13.13 CDU Operation | 13-28

13.14 FMS Route Management | 13-31

13.15 Performance Database | 13-37

13.16 Definitions of Relevant Terms and Abbreviations | 13-37

14 PERFORMANCE BASED NAVIGATION (PBN)

14.1 Introduction | 14-1

14.2 Scope of PBN | 14-2

14.3 Context | 14-2

14.4 Navigation Specifications | 14-4

14.5 Practical Use | 14-13

15 ELECTRONIC FLIGHT INSTRUMENT SYSTEM (EFIS)

Introduction | 15-1

15.1 Electronic Flight Instrument System | 15-1

15.2 Display Units | 15-2

EASA SYLLABUS INDEX
