

Table of Contents

INTRODUCTION

1 THE EARTH

Introduction | 1-1

1.1 The Shape and the Dimensions | 1-1

1.2 The Rotation and the Poles | 1-2

1.3 The Equator | 1-5

1.4 Great Circles | 1-6

1.5 Small Circles | 1-6

1.6 Parallels of Latitude | 1-7

1.7 Meridians | 1-8

1.8 Rhumb Lines | 1-8

1.9 Position | 1-9

2 MAGNETISM, DIRECTIONS AND DISTANCES

Introduction | 2-1

2.1 Magnetism | 2-1

2.2 Directions | 2-11

2.3 Distances | 2-20

3 LATITUDE, LONGITUDE AND DISTANCES

Introduction | 3-1

3.1 Latitude | 3-1

3.2 Longitude | 3-7

3.3 Distance East/West along a Parallel of Latitude - Departure | 3-10

4 THE RHUMB LINE AND THE GREAT CIRCLE IN NAVIGATION

Introduction | 4-1

4.1 Details on Great Circles | 4-1

4.2 Earth Convergency | 4-6

4.3 Rhumb Lines | 4-13

4.4 Conversion Angle | 4-15

5 SPEED AND VELOCITY

Introduction | 5-1

5.1 Speed and Velocity | 5-1

5.2 Air Speed | 5-2

5.3 Ground Speed | 5-7

5.4 Relative Speed | 5-9

5.5 Velocities | 5-9

5.6 Relative Velocity | 5-10

6 TRIANGLE OF VELOCITY

Introduction | 6-1

6.1 Vectors | 6-1

6.2 The Triangle of Velocities, Graphical Solution | 6-4

7 THE NAVIGATION COMPUTER - USE OF THE WIND SIDE

Introduction | 7-1

7.1 Principle of the Dalton Computer (CRP-5) | 7-1

7.2 Math Solution of the Headwind/Tailwind and Crosswind Components |
7-12

7.3 Wind Components for Take-Off and Landing | 7-14

8 THE NAVIGATION COMPUTER - USE OF THE CALCULATOR SIDE

Introduction | 8-1

8.1 Appleyard Scale (CRP-5 Reverse) | 8-1

8.2 Conversions | 8-4

8.3 Speed - Distance - Time Problems on CRP-5 | 8-8

8.4 Determination of Airspeeds | 8-10

8.5 Determination of Altitude | 8-15

9 SOLAR SYSTEM

Introduction | 9-1

9.1 The Universe | 9-1

9.2 The Celestial Sphere | 9-7

10 TIME

Introduction | 10-1

10.1 Astronomic Time versus Atomic Time | 10-1

10.2 The Day | 10-1

10.3 Equation of Time | 10-3

10.4 Ellipticity Factor | 10-5

10.5 Obliquity Factor | 10-5

10.6 The Year | 10-6

10.7 Time and Hour Angle | 10-7

10.8 International Date Line | 10-16

10.9 Radio Time Signals | 10-19

10.10 Sunrise and Sunset | 10-19

10.11 Twilight | 10-23

11 CHARTS

Introduction | 11-1

11.1 Chart Properties | 11-1

11.2 Projection Types | 11-5

11.3 Methods of Indicating Scale | 11-7

11.4 Methods of Showing Relief | 11-9

11.5 Conventional Signs | 11-12

12 MERCATOR PROJECTIONS

Introduction | 12-1

12.1 Direct Mercator Projection | 12-1

13 CONICAL PROJECTIONS

Introduction | 13-1

13.1 Conical Projections | 13-1

13.2 Lambert Conformal Conic Projection | 13-3

14 FLAT PLATE OR AZIMUTHAL PROJECTIONS

Introduction | 14-1

14.1 Flat Plate versus Conical Projections | 14-1

14.2 Polar Stereographic Projection | 14-2

15 GRID NAVIGATION

Introduction | 15-1

15.1 Issues at Higher Latitudes | 15-1

15.2 Direction Datum | 15-2

15.3 Grid Convergency | 15-3

15.4 Grivation | 15-5

16 DEAD RECKONING NAVIGATION (DR)

Introduction | 16-1

16.1 Mental Dead Reckoning | 16-1

16.2 Speed, Distance and Time | 16-1

16.3 Vertical Navigation | 16-6

16.4 "One in 60" Rule | 16-15

16.5 Calculation of Speed to Reach a Way-Point at a Specific Time | 16-18

16.6 Flight Log | 16-21

17 PLOTTING

Introduction | 17-1

17.1 What is Plotting and Why Do We Plot? | 17-1

17.2 List of Definitions and Terms used in Plotting | 17-2

17.3 Units to Be Used | 17-5

17.4 Plotting Symbols Used on Maps and Charts | 17-6

17.5 Types of Plot | 17-6

17.6 Calculation of Bearing to Plot | 17-10

17.7 Plotting Using Jeppesen Charts | 17-21

17.8 Airplot Techniques | 17-32

18 VISUAL NAVIGATION - MAP READING

Introduction | 18-1

18.1 Flight Planning VFR | 18-1

18.2 Finding a DR Position When Lost | 18-8

19 DIRECT READING COMPASS

Introduction | 19-1

19.1 Direct Reading Compass (DRC) | 19-1

19.2 The E Type Compass | 19-4

19.3 The Compass Swing | 19-5

19.4 Avoiding Temporary Change of Deviation | 19-6

19.5 Serviceability Tests on the Magnetic Compass | 19-6

ANNEX A AIR ALMANAC EXTRACTS

EASA SYLLABUS INDEX
