

Table of contents

List of the most important symbols.....	5
Introduction.....	9
1. Biomechanical research on designing wheelchair propulsion systems.....	11
2. Development trends of innovative solutions for wheelchair propulsion systems	25
3. Design and engineering of a test stand for testing human-wheelchair anthropotechnical systems	41
4. Procedure for measuring the biomechanical parameters of the wheelchair propulsion process with the use of a wheelchair dynamometer.....	53
5. Analysis and evaluation of muscular effort during wheelchair propulsion based on EMG measurements.....	65
6. Methodology for conducting and analyzing the results of the maximum voluntary contraction test	75
7. Methodology for determination of kinematic-dynamic parameters of the human-wheelchair anthropotechnical system	93
8. Method for measuring the rolling resistance coefficient of a wheelchair.....	109
9. Design of a modular electric-manual hybrid propulsion system for a wheelchair	121
10. Adaptive modes supporting propulsion of a manual wheelchair.....	135
11. Prototype of an internal gear hub for wheelchairs with a hand rim propulsion system	147
