

CONTENTS

<i>Preface</i>	v
<i>Glossary</i>	xiii

Chapter 1

THE GROWTH OF A TECHNOLOGY

1.1 The Balance of Properties	1
1.2 The Invention of Toughened Polystyrene	2
1.3 New Materials and Expanding Markets	3
References	8

Chapter 2

COMPATIBILITY AND COPOLYMERISATION

2.1 Introduction	9
2.2 Compatibility	9
2.2.1 Flory-Huggins theory	10
2.2.2 Solubility parameter	11
2.2.3 Partial miscibility	15
2.2.4 Equation of state thermodynamics	18
2.2.5 Tests for compatibility	19
2.2.6 Effects of compatibility upon properties	20
2.3 Copolymerisation	21
2.3.1 Random copolymerisation	21
2.3.2 Graft copolymerisation	24
2.3.3 Block copolymerisation	32
2.3.4 Epoxy resin-CTBN reaction	33
References	37

Chapter 3

CHARACTERISATION OF STRUCTURE

3.1 Optical Microscopy	39
----------------------------------	----

3.2	Transmission Electron Microscopy	42
3.2.1	Replication	42
3.2.2	Sectioning	43
3.2.3	Analysis of electron micrographs	47
3.3	Scanning Electron Microscopy	48
3.4	Light Scattering	49
3.5	Coulter Counter	51
3.6	Gel Separation	52
3.7	The Secondary Glass Transition	56
3.7.1	Dynamic mechanical testing	56
3.7.2	Dielectric relaxation measurements	57
3.7.3	Differential scanning calorimetry	58
3.7.4	Nuclear magnetic resonance	60
3.7.5	Comparison of techniques	61
3.8	Characterisation of Structure in Degraded Polymers	62
	References	64

Chapter 4

MANUFACTURE OF TOUGHENED PLASTICS

4.1	Bulk and Bulk-Suspension Polymerisation of HIPS	66
4.1.1	Outline of process	67
4.1.2	Factors controlling structure	72
4.1.3	Commercial processes	79
4.2	Manufacture of Toughened Epoxy Resins	82
4.3	Toughened Polypropylene	87
4.4	Emulsion Polymerisation—ABS Manufacture	90
4.4.1	Outline of process	90
4.4.2	Mechanism of emulsion polymerisation	92
4.4.3	Factors controlling structure	94
4.5	Blending	99
4.5.1	Blending directly with rubber	100
4.5.2	Blending with grafted rubbers	102
4.6	Comparison of Processes	102
	References	105

Chapter 5

VISCOELASTIC PROPERTIES

5.1	Experimental Observations	108
5.2	Models for Toughened Polymers	116

5.3	Mathematical Theories	118
5.3.1	Bounds on moduli	119
5.3.2	Approximate equations	120
5.4	Application of Theories	122
5.5	Stress Analysis	126
5.5.1	Isolated spherical particle	126
5.5.2	Finite element analysis	129
5.5.3	Experimental methods	131
5.5.4	Thermal shrinkage stresses	133
5.6	Orientation	134
	References	134

Chapter 6

DEFORMATION MECHANISMS IN GLASSY POLYMERS

6.1	Shear Yielding	137
6.1.1	Strain localisation	137
6.1.2	Structure of shear bands	142
6.1.3	Shear band formation	145
6.1.4	Criteria for shear yielding	150
6.2	Crazing	155
6.2.1	Structure of crazes	157
6.2.2	Craze formation	159
6.2.3	Properties of crazes	172
6.3	Interactions between Crazes and Shear Bands	177
	References	180

Chapter 7

MECHANISMS OF RUBBER TOUGHENING

7.1	Statement of the Problem	182
7.2	Qualitative Theories of Toughening	188
7.2.1	Early theories	188
7.2.2	Multiple crazing theory	189
7.2.3	Shear yielding theories	191
7.2.4	Crazing with shear yielding	193
7.3	Volumetric Strain Measurements	195
7.4	Kinetics of Crazing	201
7.4.1	Crazing without interaction	201
7.4.2	Crazing-shear interaction	205
7.5	Structure-Property Relationships	206
7.5.1	Rubber particle size	207
7.5.2	Rubber-matrix adhesion	208
	References	210

*Chapter 8***DEFORMATION AND YIELDING**

8.1	Creep	212
8.1.1	Stress	212
8.1.2	Temperature	217
8.1.3	Matrix composition	218
8.1.4	Rubber content	222
8.1.5	Orientation	223
8.2	Tensile Testing	226
8.3	Multiaxial Loading	231
8.4	Strain Damage	236
8.4.1	Modulus changes	236
8.4.2	Fatigue	238
8.4.3	Recovery	240
	References	241

*Chapter 9***FRACTURE MECHANICS**

9.1	Linear Elastic Fracture Mechanics	244
9.1.1	Griffith criterion	244
9.1.2	Stress intensity criterion	247
9.1.3	Non-linearity	249
9.2	Crack-Opening Displacement Criterion	251
9.3	Test Methods	253
9.4	Factors Affecting Fracture Resistance	258
9.4.1	Crack speed	259
9.4.2	Rubber content	260
9.4.3	Temperature	262
9.4.4	Molecular weight	264
9.4.5	Fibre reinforcement	265
9.4.6	Molecular orientation	266
9.4.7	Fatigue	268
	References	270

*Chapter 10***IMPACT STRENGTH**

10.1	Charpy and Izod Tests	273
10.1.1	Fracture mechanics	274
10.1.2	Blunt notches	276
10.1.3	Fracture with yielding	278
10.1.4	Unnotched specimens—brittle fracture and general yield	283

CONTENTS

xi

10.2 Falling Weight Test	286
10.2.1 Elastic deformation of circular plate—energy for brittle fracture	288
10.2.2 Falling weight impact strength vs plate thickness—experimental data	288
10.2.3 Foil-coated sheet	289
10.3 Effect of Temperature on Impact Strength	290
10.3.1 Glass transition of rubber	295
10.4 Effect of Polymer Structure on Impact Strength	297
10.4.1 Rubber content	297
10.4.2 Matrix composition	299
10.5 Ageing	301
References	304

Chapter 11

MELT RHEOLOGY AND PROCESSING

11.1 Elastico-Viscous Properties	306
11.2 Viscosity	310
11.2.1 Factors affecting viscosity	312
11.3 Microrheology	316
11.3.1 Rubber particle migration	319
11.3.2 Necklace formation	320
11.3.3 Extensional flow	321
11.4 Thermoforming	321
11.5 Extrusion	324
11.6 Injection Moulding	326
References	331

Chapter 12

ELECTROPLATING

12.1 Outline of Electroplating Process	334
12.1.1 Etching	335
12.2 Peel Strength	338
12.3 Thermal Cycling	342
References	343
