

TABLE OF CONTENTS

Preface	8
Abbreviations and acronyms	10
 Chapter 1. Introduction	 13
1.1. Vision 2020 of aviation development	13
1.2. Airport environmental impact case studies	15
1.3. The EUROCONTROL concept of airport environment capacity	16
1.4. Aviation fuel, its combustion and exhaust gases	17
1.5. European Commission thematic strategy on air pollution	18
 Chapter 2. Air transport and its perspectives	 19
2.1. Environmental aspects of air transport	19
2.2. General purpose aviation segment	21
2.3. Air transport vision 2020 perspectives	23
2.4. Air transport beyond 2020	26
 Chapter 3. Aero-engine exhaust gases	 28
3.1. Airplane propulsion systems	28
3.2. Aero engine exhaust pollutants	30
3.3. Exhaust pollutants reduction	35
3.4. Engine enhancement projects	37
 Chapter 4. Airport emissions simulation software – EDMS	 40
4.1. Hardware requirements, installation modules and features	40
4.2. Emissions calculations	42
4.2.1. Aircraft activity	43
4.2.2. Aircraft support equipment	45
4.2.3. Auxiliary power units (APU)	46
4.2.4. On-road vehicles	46
4.2.5. On-road vehicles in parking lots	47
4.2.6. Stationary sources	48
4.2.7. Training fires	49

4.3. Inventory data output	49
4.4. Dispersion calculations in EDMS programme	50
4.4.1. Inputs required	50
4.4.2. Weather data	51
4.4.3. Receptor locations	51
4.4.4. Dispersion modelling and calculation	52
4.4.5. Point, area, and volume sources	53
4.4.6. Airport pollution sources	54
4.4.7. Airport graphical display and data output	55
Chapter 5. Airport emissions simulation software – ALAQS	58
5.1. ALAQS features, objectives and installation	58
5.2. Airport emissions methodology	61
5.2.1. Movements data.	61
5.2.2. Gate emissions	65
5.2.3. Taxiway emissions	67
5.2.4. Queue emissions	69
5.2.5. Runway pre-processing and emissions	71
Chapter 6. Airport emissions inventory	75
6.1. Aircraft pollution sources and reduction methods	76
6.2. Flight phases	78
6.3. Emissions at aircraft stand	79
6.4. Emissions inventory of Frederic Chopin Warsaw Airport	8
6.4.1. Aircraft emissions	83
6.4.2. GSE emissions	85
6.4.3. Road vehicle emissions	86
6.4.4. Stationary source emissions	86
Chapter 7. Emissions simulation and exemplary results	88
7.1. Overview of Warsaw Frederic Chopin Airport	88
7.2. Aircraft engines emissions	90
7.2.1. Models and results.	91
7.2.2. Special considerations	94
7.3. Gate emissions (APU, GPU, Engine Start and Ground Support Equipment – GSE)	94
7.4. Stationary sources emissions	95
7.5. Road vehicle emissions	96
7.6. Best practice recommendations	98
Chapter 8. Pollutants dispersion	99
8.1. Dispersion computation	99
8.2. Measurement techniques for air toxicants	100

8.2.1. Passives sampling (diffusion tubes)	101
8.2.2. Active sampling	101
8.2.3. Automatic sampling	101
8.2.4. Scope of application of measuring methods	102
8.3. Near field dispersion	103
8.4. Condensation trails formation and effects	103
8.4.1. Thermodynamics of contrail formation	104
8.4.2. Persistent contrails.	106
8.4.3. Climate impact of contrails, mitigation options and conclusions	107
8.5. Volatile organic compounds impact on airport air quality.	107
Charter 9. Electromagnetic pollution	110
9.1. The SIRENA project	110
9.2. The ADOC Proposal	111
9.3. The electromagnetic pollution at Warsaw airport expertise	112
Chapter 10. Monitoring of airport noise	113
10.1. Airport noise modelling state of the art	113
10.2. ENHANCE Project	115
10.3. Measurement system of noise monitoring at F. Chopin Warsaw Airport	116
Chapter 11. Airport environmental impact legislation and standards	119
11.1. Air quality EU legislation	119
11.2. Aircraft noise legislations state of the art	121
11.3. Polish legislation relevant to airports environmental impact	121
Chapter 12. Environmental and health effects, prognostics and conclusions	125
12.1. Environmental effects	125
12.2. Health effects	126
12.3. Prognostics	127
12.4. Conclusions	129
BIBLIOGRAPHY	130
ANNEXED CD CONTENTS	
• Day of flights over Europe	
• Exemplary airport daily movements table	
• EDMS manual	
• ALAQS-AV application reference manual	
• Air Quality European Union Directives
