

CONTENTS

Preface.....	5
1. Introduction.....	7
1.1. Principles of mathematical modeling.....	7
1.2. Advanced manufacturing processes	13
References.....	16
2. Mathematical modeling of electrochemical machining processes	17
2.1. Introduction.....	17
2.2. Problem statement.....	21
2.3. Mathematical modeling of electrochemical shaping	23
2.4. The “ideal” ECM processes.....	38
2.5. Steady-state of ECM processess	57
2.6. Analysis of effects of various factors on ECM accuracy	67
2.7. Computer simulation system for electrochemical shaping	89
2.8. ECM with using vibrating tool electrodes	102
2.9. The pulse electrochemical machining (PECM)	113
2.10. Electrochemical micromachining using ultrashort pulseses	150
2.11. Jet electrochemical machining	162
2.12. Surface roughness and topography after ECM	179
References.....	194
3. Mathematical modeling of electrical discharge machining processes	201
3.1. Introduction.....	201
3.2. Some approaches of mathematical modeling of EDM process	207
3.3. The mathematical modeling of the crater formation	210
3.4. Thermal modeling massive random electrical discharges	224
3.5. The matematical modeling of rotating electrical discharge machining (REDM).....	230
3.6. Mathematical modeling of WEDM of multilayer and laminate structures.....	245
3.7. Mathematical modeling of heating of wire in WEDM	253
3.8. Mechanism of removal of diamond grains from PCD layer.....	261
References.....	265

4. Mathematical modeling of hybrid machining processes	271
4.1. Introduction	271
4.2. A methodology for hybrid machining processes evaluation	273
4.3. Electrochemical discharge machining (ECDM/ECAM)	282
4.4. Abrasive hybrid machining (AHM) processes.....	295
References.....	304

5. Mathematical modeling of selected additive manufacturing processes	307
5.1. Introduction.....	307
5.2. Proces parameters	313
5.3. Overview of approaches of mathematical modeling of SLS/SLM processes	317
5.4. Accuracy problems of SLS/SLM processes	335
5.5. Residual stresses and deformation in SLM	346
References.....	353
