

Table of contents

Preface // 7

1. Introduction // 9

- 1.1. The concept of system identification // 9
- 1.2. Classification of identification methods // 12

2. System models // 13

- 2.1. Introduction // 13
 - 2.1.1. Discrete-time models // 13
 - 2.1.2. Discretisation using the zero-order hold method // 14
 - 2.1.3. Tustin's method // 15
 - 2.1.4. Finite difference method // 15
- 2.2. Deterministic models // 16
 - 2.2.1. FIR model // 16
 - 2.2.2. ARMA model // 17
 - 2.2.3. State-space model // 19
- 2.3. Stochastic models // 23
 - 2.3.1. ARMAX and ARIMAX models // 23
 - 2.3.2. ARX and ARIX models // 24
 - 2.3.3. Output error model // 26
 - 2.3.4. State-space model // 27
- 2.4. Bounded noise models // 29
 - 2.4.1. Model with simple disturbance input // 30
 - 2.4.2. Model with compound disturbance input // 30
 - 2.4.3. State-space model // 31
- 2.5. Model properties // 32
 - 2.5.1. Controllability, reachability, observability and detectability // 32
 - 2.5.2. Identifiability // 33

3. Direct estimation methods // 35

- 3.1. Introduction // 35
- 3.2. Order of persistent excitation // 36
 - 3.2.1. Definition // 36
 - 3.2.2. Order of persistent excitation of typical signals // 37
 - 3.2.3. Persistent excitation and parameter estimation // 38
- 3.3. Deterministic models and the least-squares method // 39
- 3.4. Stochastic models and the least-squares method // 40
 - 3.4.1. Least-squares method for stochastic models // 40
 - 3.4.2. Weighted least-squares method // 48
 - 3.4.3. Bias-eliminated least-squares method // 48
 - 3.4.4. Instrumental variables method // 51
 - 3.4.5. Maximum likelihood method // 52
- 3.5. Bounded noise models and the least-squares method // 55

3.6. Model order estimation // 56

4. Recursive estimation methods // 58

4.1. Introduction // 58

4.2. Deterministic models // 58

4.2.1. Least-squares method // 58

4.2.2. Projection method // 62

4.2.3. Modified projection method // 62

4.2.4. Modified projection method for prediction model // 64

4.2.5. Modified least-squares method for prediction model // 64

4.3. Stochastic models // 65

4.3.1. Least-squares method // 65

4.3.2. Bias-eliminated least-squares method // 65

4.3.3. Kalman filter method // 66

4.3.4. Stochastic approximation method // 67

4.3.5. Instrumental variables method // 67

4.3.6. Extended least-squares method // 68

4.3.7. Maximum likelihood method // 68

4.3.8. Extended Kalman predictor // 69

4.3.9. Second-order filter // 71

4.4. Bounded noise models // 72

4.4.1. Least-squares method // 72

4.4.2. Least-squares method for prediction model // 73

4.4.3. EW-RLS algorithm // 74

4.4.4. MVSA algorithm // 74

4.4.5. Fixed dead zone method // 75

4.4.6. Projection method with dead zone // 76

4.5. Recursive estimation of the order and parameters // 78

4.5.1. Introduction // 78

4.5.2. Preliminary assumptions // 79

4.5.3. Recursive estimation of the degrees and coefficients // 80

4.5.4. Recursive algorithm for the simultaneous degrees and parameters estimation // 83

4.6. Model delay estimation // 86

5. Time-variant system identification // 89

5.1. Introduction // 89

5.2. Weighted least-squares method // 90

5.3. Forgetting factor and windup in estimation // 90

5.4. Modifications of recursive least-squares method // 92

5.4.1. Investigation of persistent excitation condition // 92

5.4.2. Adaptation to noise // 94

5.4.3. Robust estimation // 95

6. Closed-loop system identification // 97

6.1. Introduction // 97

6.2. Example of first-order inertia system // 97

- 6.3. General conditions for identifiability // 98
- 6.4. Identifiability of LQG control system // 99
- 6.5. Model order estimation in a closed-loop system // 101

7. Selection of excitation signal // 103

- 7.1. Introduction // 103
- 7.2. FIR model // 103
- 7.3. ARX bounded noise model // 104
- 7.4. Stochastic ARX model // 107
- 7.5. Selection of excitation signal and uniqueness of estimation // 107

8. Multivariable system identification // 109

9. Case study – simple identification experiment // 119

- 9.1. Analytical method // 119
- 9.2. The 'real' experiment // 120

10. Experiment implementation in Matlab // 123

- 10.1. Parameter estimation // 123
- 10.2. Creating model structure // 124
- 10.3. Model conversion // 125
- 10.4. Selected additional functions // 125
- 10.5. Simulink // 125

Summary // 126

References // 127
