

CONTENTS

1. GENERAL INTRODUCTION	7
2. POROUS MATERIALS.....	10
2.1. Introduction	10
2.2. Boundary integral equation for linear elasticity	12
2.3. Fast multipole boundary element method	13
2.4. Numerical examples	18
2.4.1. Solid body with single cavity	18
2.4.2. Solid body with two cavities	21
2.4.3. Materials with uniformly distributed cavities	25
2.4.4. Materials with randomly distributed cavities	28
3. MATERIALS WITH CRACKS AND RIGID FIBRES.....	35
3.1. Introduction	35
3.2. Boundary integral equations for a plate with cracks	38
3.3. Numerical implementation of the method for cracks	39
3.4. Contact of crack surfaces.....	39
3.5. Boundary integral equations for a plate with rigid fibres.....	41
3.6. Numerical implementation of the method for fibres	42
3.7. Numerical examples	44
3.7.1. Sintered materials with branched cracks	44
3.7.2. Materials with cracks subjected to compression	53
3.7.3. Composites with rigid fibres	59
4. MAGNETO-ELECTRO-ELASTIC MATERIALS	62
4.1. Introduction	62
4.2. Model of magneto-electro-elastic materials	63
4.3. Dual number algebra	70
4.4. Numerical examples	72
4.4.1. Local sensitivity analysis of effective properties of magneto- electro-elastic composite	72

4.4.2. Spatial derivatives of 3D Green's function in magnetoelectroelasticity	76
4.4.3. Sensitivity analysis for optimal design of magnetoelectric composite	82
5. OPTIMAL DESIGN OF MATERIALS	89
5.1. Introduction	89
5.2. Artificial immune systems.....	90
5.3. Numerical examples	95
5.3.1. Identification of porous structure parameters	95
5.3.2. Optimization of porous structure effective elastic properties	100
5.3.3. Optimization of composites with rigid fibres.....	106
5.3.4. Optimization of magnetoelectric composites	109
5.3.5. Identification of distribution of materials in microstructure	112
6. GENERAL SUMMARY.....	121
BIBLIOGRAPHY	124
ABSTRACT.....	131
