

CONTENTS

Preface	5
Abbreviations	9
Chapter 1. District energy systems	11
1.1. Background	11
1.2. Polygeneration	12
1.3. Polygeneration energy systems	17
1.4. Centralised and decentralised polygeneration	18
1.5. Polygeneration based DES	19
1.6. DH and polygeneration	20
1.7. Conversion technologies and fuels in DES	21
1.8. Implementation of polygeneration based DES	22
1.9. Elements and future role of efficient DES	23
1.10. Multi-energy systems	24
1.11. Energy HUB	26
1.12. Solar hybrid polygeneration system	27
References	29
Chapter 2. District Heating. Infrastructure, technologies and trends	31
2.1. Introduction to the DH network	31
2.2. Infrastructure, parts and components of DH	39
2.3. Toward smart DH system	74
2.4. Third party-access to DH	78
References	84
Chapter 3. Heat pump based district heating	93
3.1. Overview of heat pumps in DH	93
3.2. Alternatives to heat pump integration into DH	99
3.3. Technical triangle of heat pump based DH	101
3.4. Scenarios of heat pump connection and operation in DH	111
3.5. Environmental obstacles of heat pumps in district heating	123
References	132
Chapter 4. Assessment of flexibility for heat pump-based district heating	139
4.1. Introduction	139
4.2. Flexibility definition and measures in energy systems	140
4.3. Challenges of electricity system flexibility in the energy system	142
4.4. Holistic approaches to the flexibility of the energy system	143
4.5. Thermal networks as a flexible part of a smart energy system	144
4.6. Flexibility in district heating–electricity interface	146

4.7. Addressing the operation flexibility in thermal networks	147
4.8. The flexibility of the thermal network and thermal storage	149
4.9. The interface of CHP and heat pumps in district heating	150
4.10. Energy flexible buildings and heat pumps	153
4.11. Heat pumps flexibility in a smart system	155
4.12. Individual and pool heat pumps in smart system context	159
4.13. Large scale heat pumps in district heating	161
4.14. Power to heat in district heating	164
4.15. Flexibility of heat requirement	168
4.16. Flexibility in the power grid	171
References	181
