
CONTENTS

PREFACE.	7
I. SCOPE OF FILTERING	13
1.1. Introduction	13
1.2. Nature of modern filtering	13
1.3. Filtering equations - difference equations	17
1.4. Reality is set of frequencies	21
1.5. What filter sees: digital sequences that change	22
1.6. Pulse and step sequences - foundations of nature	23
1.7. Two other sequences that are basic in nature	26
1.8. Linear system impulse response	32
1.9. Linear system stability and physical realizability	39
II. FILTERS IN FREQUENCY DOMAIN - DIGITAL FILTER DESIGN	41
2.1. Introduction	41
2.2. Linear system frequency response and transfer function	46
2.3. First order filter frequency response	49
2.4. Second order filter frequency response	53
2.5. Exact second order lowpass filter design	62
2.6. Higher order filters and their realizations	65
2.7. Ideal basic filters	70
2.8. Computer aided design of digital filters	74
III. OPTIMAL KALMAN FILTER	81
3.1. Introduction	81
3.2. Historical background	81
3.3. Principle of recursive estimation	84
3.4. Discrete Kalman filter	85

3.5. Optimal filter for deterministic and stochastic disturbances	93
3.6. Remarks on optimal filter equations	95
3.7. Examples	97
3.8. Alternative forms of discrete Kalman filter	105
3.8.1. Second form of Kalman filter equations	105
3.8.2. Third form of Kalman filter that allows to avoid matrix inverse operation	109
3.8.3. Case of coloured disturbances and other modifications	113

IV. PARAMETER IDENTIFICATION BY KALMAN FILTER 119

4.1. Introduction	119
4.2. Link between filtering and parameter estimation	121
4.3. Estimation of parameters in linear systems	131
4.4. Modified extended Kalman filter for parameter estimation in linear systems	136
4.5. Measurement noise variance estimation	147
4.6. Adaptive Kalman filters	156
4.7. Conclusions	160

V. ANALYTICAL APPROACHES TO KALMAN FILTER STUDY 161

5.1. Introduction	161
5.2. Integral representation of continuous-time Kalman filter	162
5.3. Influence of initial conditions on quality of estimation	165
5.4. Sensitivity of optimal estimates to state noise	170
5.5. Discrete Kalman filter transition matrix and its application for stability analysis	179
5.5.1. Kalman filter stability analysis for nonsingular initial conditions	180
5.5.2. Kalman filter stability analysis for singular initial conditions	184
5.6. Influence of initial conditions quality of estimates	188

VI. OPTIMAL AND SUBOPTIMAL FILTERING OF DISCRETE-TIME DISTRIBUTED PARAMETER SYSTEMS. 193

6.1. Introduction	193
6.2. Linear system description	194
6.3. Linear filtering	196

6.4. Nonlinear filtering	206
6.5. Suboptimal filtering	210
6.5.1. Suboptimal algorithm	211
6.5.2. Example	215
6.6. State estimation under incomplete a priori information	219
6.6.1. Suboptimal algorithm.	220
6.6.2. Example	222

VII. KALMAN FILTER APPLICATION TO MOVING OBJECT

STATE ESTIMATION	225
7.1. Introduction	225
7.2. Optimal aircraft position estimation	226
7.3. Estimation and prediction for maneuvering target trajectories	233
7.4. Underwater target motion analysis	239

VIII. FAULT DETECTION IN DYNAMIC SYSTEMS. 255

8.1. Introduction	255
8.2. State estimation approach	257
8.2.1. Linear Kalman Filter	258
8.2.2. Adaptive estimation	261
8.2.3. Nonlinear filtering	263
8.2.4. Suboptimal nonlinear filtering	265
8.2.5. Kalman filter for nonlinear systems with coupled static and dynamic models	266
8.2.6. Correction of extended Kalman filter	269
8.3. Fault detection in coal fired power plants	271
8.3.1. Process description and model formulation	271
8.3.2. Statistical test for checking validity of model	276
8.3.3. Design of local estimator and application to fault detection	278
