CONTENTS

PART 1 FLUID DYNAMICS

Chapter 1 Properties of Fluids

1.1 Types of fluid flow 3
1.2 Newtonian fluids 5
1.3 Viscosity of gases 7
1.4 Viscosity of liquids 13
1.5 Non-Newtonian fluids 31

Chapter 2 Laminar Flow and Momentum Balances

2.1 Momentum balance 36
2.2 Flow of a falling film 37
2.3 Flow between parallel plates 41
2.4 Flow through a circular tube 43
2.5 General momentum equations. 47
2.6 The conservation of momentum equation in curvilinear coordinates . . 53
2.7 Application of Navier-Stoke's equation 59

Chapter 3 Turbulent Flow and Experimental Results

3.1 Friction factors for flow in tubes 75
3.2 Flow in noncircular conduits 82
3.3 Flow past submerged bodies 83
3.4 Flow through packed beds of solids 91
3.5 Fluidized beds 102

Chapter 4 Energy Balance Applications in Fluid Flow

4.1 Conservation of energy. 111
4.2 Friction losses in straight conduits 114
4.3 Enlargement and contraction 117
4.4 Flow through valves and fittings 118
4.5 Flow through smooth bends and coils 121
4.6 Flow measurement 123
4.7 Flow from ladles 134

Chapter 5 Flow and Vacuum Production

5.1 Pumps 143
5.2 Fans and blowers 150
5.3 High-velocity jets 157
5.4 Vacuum production 167

PART 2 ENERGY TRANSPORT

Chapter 6 Fourier's Law and Thermal Conductivity of Materials

6.1 Fourier's law and thermal conductivity 183
6.2 Thermal conductivity of gases 185
6.3 Thermal conductivity of solids 188
6.4 Thermal conductivity of liquids 196
6.5 Thermal conductivity of bulk materials 198

Chapter 7 Heat Transfer and the Energy Equation

7.1 Heat transfer with forced convection in a tube 207
7.2 Heat transfer with laminar forced convection over a flat plate 213
7.3 Heat transfer with natural convection 220
7.4 Heat conduction 226
7.5 The general energy equation 229
7.6 The energy equation in curvilinear coordinates 233

Chapter 8 Correlations for Heat-Transfer with Convection

8.1 Heat-transfer coefficients for forced convection in tubes 242
8.2 Heat-transfer coefficients for forced convection past submerged objects . 249
8.3 Heat transfer coefficients for natural convection 252
8.4 Quenching heat-transfer coefficients 256
8.5 Boiling heat transfer 263

Chapter 9 Conduction of Heat in Solids

9.1 The energy equation for conduction 277
9.2 Steady-state one-dimensional systems 278
9.3 Steady-state, two-dimensional heat flow 285
9.4 Transient systems, finite dimensions 290
9.5 Transient conditions, infinite and semi-infinite solids 316
9.6 Simple multidimensional problems 321

Chapter 10 Solidification Heat Transfer

10.1 Solidification in sand molds 329
10.2 Solidification in metal molds 335
10.3 Integral solution for solidification 350
10.4 Continuous casting 353

Chapter 11 Radiation Heat Transfer

11.1 Basic characteristics 361
11.2 The black radiator and emissivity 363
11.3 The energy distribution and the emissive power 364
11.4 Gray bodies and absorptivity 369
11.5 Exchange between infinite parallel plates 370
11.6 View factors 374
11.7 Electric circuit analogy for radiation problems 379
11.8 Furnace enclosures 381
11.9 Radiation combined with convection 387
11.10 Radiation from gases 389
11.11 Enclosures filled with radiating gases 395
11.12 Transient conduction with radiation at the surface 397

Chapter 12 Thermal Behavior of Metallurgical Packed-Bed Reactors

12.1 Initial definitions and assumptions 404
12.2 Steady state, counter-current flow 406
12.3 Heat-transfer coefficients in packed beds 412
12.4 Stationary bed, infinite heat transfer 414
12.5 Stationary bed, infinite heat-transfer coefficient, and heat of reaction . . 417
12.6 Stationary bed, effect of thermal conductivity within the bed 420
12.7 The effect of a finite heat-transfer coefficient—stationary bed 422

PART 3 MASS TRANSPORT

Chapter 13 Fick's Law and Diffusivity of Materials

13.1 Definition of fluxes—Fick's first law 431
13.2 Diffusion in solids 433
13.3 Diffusion in solid nonmetals 449
13.4 Diffusion in liquids 455
13.5 Diffusion in gases 463
13.6 Diffusion through porous media 467

Chapter 14 Diffusion in Solids

14.1 Steady-state diffusion experiments 473
14.2 Transient diffusion experiments 478
14.3 Finite system solutions 486
14.4 Diffusion-controlled processes with a moving interface 490
14.5 Homogenization of alloys 497
14.6 Formation of surface tarnish layers 502
14.7 Surface coatings 510

Chapter 15 Mass Transfer in Fluid Systems

15.1 Diffusion through a stagnant gas film 515

15.2 Diffusion in a moving gas stream 518
15.3 Diffusion into a falling liquid film 521
15.4 The mass-transfer coefficient 524
15.5 Forced convection over a flat plate—approximate integral technique . . 529
15.6 General equation of diffusion with convection 532
15.7 Forced convection over a flat plate—exact solution 535
15.8 Correlations of mass-transfer coefficients for turbulent flow 537
15.9 Models of the mass-transfer coefficient 542

Chapter 16 Interphase Mass Transfer

16.1 Two-resistance mass-transfer theory 547
16.2 Mixed control in gas–solid reactions 551
16.3 Mass transfer with vaporization 560
16.4 The effect of temperature and the concept of thermal stability 567

Appendix I 573
Appendix II 574
Appendix III 586
Appendix IV 588
List of Principal Symbols 599
