|-----------------------------------------------------------------------------------------------------------------------|-----------|
| <b>Preface</b> .....                                                                                                  | <b>11</b> |
| <b>1. Definition, systematics and methodology of designing hydraulic gear machines</b> ....                           | <b>13</b> |
| 1.1. Definition and systematics .....                                                                                 | 13        |
| 1.2. Designing methodology .....                                                                                      | 15        |
| <b>2. The process of energy transformation in hydraulic gear machines</b> .....                                       | <b>20</b> |
| 2.1. General models of a pump and a motor .....                                                                       | 20        |
| 2.1.1. General model of a pump .....                                                                                  | 20        |
| 2.1.2. General model of a motor .....                                                                                 | 21        |
| 2.2. Ideal and real characteristics of a pump and a motor .....                                                       | 24        |
| 2.2.1. Characteristics of a pump .....                                                                                | 24        |
| 2.2.2. Characteristics of a motor .....                                                                               | 28        |
| 2.3. Conclusions .....                                                                                                | 32        |
| <b>3. Gears in hydraulic gear machines</b> .....                                                                      | <b>33</b> |
| 3.1. Teeth, gears and the external involute gear systems .....                                                        | 34        |
| 3.1.1. The tooth, the external gear .....                                                                             | 34        |
| 3.1.2. The boundary number of teeth, correction of the external tooth .....                                           | 38        |
| 3.1.3. The external involute gear system .....                                                                        | 40        |
| 3.1.3.1. The uncorrected gear system, the principle of co-operation,<br>the number of contact .....                   | 40        |
| 3.1.3.2. The corrected gear system, the principle of co-operation,<br>the number of contact .....                     | 42        |
| 3.2. Teeth, gears and the internal involute gear systems .....                                                        | 45        |
| 3.2.1. The tooth, the internal gear .....                                                                             | 45        |
| 3.2.2. The boundary number of teeth, correction of the internal tooth .....                                           | 47        |
| 3.2.3. The internal involute gear system .....                                                                        | 48        |
| 3.2.3.1. The uncorrected gear system, the principle of co-operation,<br>the number of contact .....                   | 48        |
| 3.2.3.2. The corrected gear system, the principle of co-operation,<br>the number of contact .....                     | 50        |
| 3.2.3.3. Interference of the gear teeth .....                                                                         | 52        |
| 3.3. Teeth, gears and the internal cycloidal gear systems .....                                                       | 54        |
| 3.3.1. Teeth, gears and the uncorrected internal epicycloidal gear system .....                                       | 54        |
| 3.3.2. Teeth, gears and the corrected internal epicycloidal gear system .....                                         | 59        |
| 3.3.3. Principle of co-operation in the epicycloidal gear system, the line of contact,<br>the number of contact ..... | 61        |

|           |                                                                                                                    |            |
|-----------|--------------------------------------------------------------------------------------------------------------------|------------|
| 3.3.4.    | Teeth, gears and the uncorrected internal hypocycloidal gear system .....                                          | 64         |
| 3.3.5.    | Teeth, gears and the corrected internal hypocycloidal gear system .....                                            | 67         |
| 3.3.6.    | Principle of co-operation in the hypocycloidal gear system, the line of contact,<br>the number of contact .....    | 69         |
| 3.3.7.    | Principle of co-operation in the cycloidal gear system with moveable axes .....                                    | 71         |
| 3.3.8.    | Principle of co-operation in the cycloidal multi-gear systems .....                                                | 74         |
| 3.4.      | Conclusions .....                                                                                                  | 75         |
| <b>4.</b> | <b>Channels and clearances in the fluid power gear machines .....</b>                                              | <b>78</b>  |
| 4.1.      | The system of fixed channels and clearances .....                                                                  | 78         |
| 4.2.      | The system of moveable channels and clearances .....                                                               | 80         |
| 4.3.      | The system of channels and clearances in the machines of the first group .....                                     | 81         |
| 4.3.1.    | Inlet channel and inlet chamber .....                                                                              | 82         |
| 4.3.2.    | Inlet bridge .....                                                                                                 | 83         |
| 4.3.3.    | Outlet channel and outlet chamber .....                                                                            | 85         |
| 4.3.4.    | Outlet bridge .....                                                                                                | 86         |
| 4.3.5.    | Axial and radial clearance .....                                                                                   | 103        |
| 4.4.      | The system of channels and clearances in the machines of the second group .....                                    | 105        |
| 4.4.1.    | Inlet channel and inlet chamber .....                                                                              | 105        |
| 4.4.2.    | Inlet bridge .....                                                                                                 | 108        |
| 4.4.3.    | Outlet channel and outlet chamber .....                                                                            | 109        |
| 4.4.4.    | Outlet bridge .....                                                                                                | 110        |
| 4.4.5.    | Axial and radial clearance .....                                                                                   | 118        |
| 4.5.      | The system of channels and clearances in the machines of the third group .....                                     | 120        |
