

Content

Introduction.....	5
1 Processes modeling in warehouse facilities	8
1.1 Introduction to the warehouse facilities modelling	8
1.2 Warehouse processes modelling.....	9
2 Logistics facility designing with the use of computer databases ..	17
2.1 Database definition	17
2.2 Database development.....	19
3 Technical equipment of logistics facilities	24
3.1 Transport means classification	24
3.1.1 Introduction.....	24
3.1.2 Transport means classification.....	26
3.1.3 Logistics object transport means.....	34
3.2 Logistics facility additional equipment	48
3.2.1 Introduction.....	48
3.2.2 Additional mechanical warehouse equipment	49
3.2.3 Non mechanical warehouse equipment	50
3.3 Equipment at the warehouse entrance.....	51
3.3.1 Introduction.....	51
3.3.2 Equipment for the external means of transport service	52
4 Database designing for the warehouse facilities system modelling	54
4.1 Database designing issues for the SIMMAG3D system.....	54
4.1.1 General remarks	54
4.1.2 Database models for the SIMMAG3D system	56
4.1.3 SIMMAG3D database management.....	63
4.2 The concept of the SIMMAG3D database	69
4.3 Data security requirements in the SIMMAG3D database	70
5 Structure of the SIMMAG3D system	73
5.1 Structure of decision support systems	73
5.2 The structure of the SIMMAG 3D system supporting the visualization of 3D warehouse objects	77
5.3 The structure of the SIMMAG3D database from the point of view of data needs	80

6	SIMMAG3D database.....	83
6.1	Introduction.....	83
6.2	Logistics objects data.....	85
6.2.1	Logistics object location	85
6.2.2	Logistics object modelling data	87
6.2.3	The scope of data on modelling of the warehouse process	90
6.3	Data on equipment.....	91
6.4	Data on objects in 3D	97
6.5	Data from the WMS system	101
6.6	Database structure.....	103
	Conclusion	109
	Literature.....	111
	Pictures list	120
	Tables list.....	122
