Preface.....xvii
Authors.....xix

Chapter 1 Introduction 1

1.1 Importance of Interaction 2

1.2 Importance of Material Behavior 3

1.2.1 Linear Elastic Behavior 3

1.2.2 Inelastic Behavior 4

1.2.3 Continuous Yield Behavior 4

1.2.4 Creep Behavior 4

1.2.5 Discontinuous Behavior 4

1.2.6 Material Parameters 5

1.3 Ranges of Applicability of Models 6

1.4 Computer Methods 6

1.5 Fluid Flow 7

1.6 Scope and Contents 7

References 8

Chapter 2 Beam-Columns, Piles, and Walls: One-Dimensional Simulation..... 11

2.1 Introduction 11

2.2 Beams with Spring Soil Model 11

2.2.1 Governing Equations for Beams with Winkler Model..... 11

2.2.2 Governing Equations for Flexible Beams 13

2.2.3 Solution..... 14

2.3 Laterally Loaded (One-Dimensional) Pile 15

2.3.1 Coefficients A, B, C, D: Based on Boundary Conditions 15

2.3.2 Pile of Infinite Length 16

2.3.3 Lateral Load at Top 16

2.3.4 Moment at Top..... 19

2.3.5 Pile Fixed against Rotation at Top 20

2.3.6 Example 2.1: Analytical Solution for Load at Top of Pile with Overhang 22

2.3.7 Example 2.2: Long Pile Loaded at Top with No Rotation 25

2.4 Numerical Solutions 25

2.4.1 Finite Difference Method..... 26

2.4.1.1 First-Order Derivative: Central Difference..... 26

	2.4.1.2	Second Derivative	27
	2.4.1.3	Boundary Conditions	27
	2.4.2	Example 2.3: Finite Difference Method: Long Pile Restrained against Rotation at Top	35
2.5		Finite Element Method: One-Dimensional Simulation	40
	2.5.1	One-Dimensional Finite Element Method	40
	2.5.2	Details of Finite Element Method	42
		2.5.2.1 Bending Behavior	42
		2.5.2.2 Axial Behavior	43
	2.5.3	Boundary Conditions	46
		2.5.3.1 Applied Forces	47
2.6		Soil Behavior: Resistance–Displacement (p_y – v or p – y) Representation	47
	2.6.1	One-Dimensional Response	48
	2.6.2	p_y – v (p – y) Representation and Curves	48
	2.6.3	Simulation of p_y – v Curves	50
	2.6.4	Determination of p_y – v (p – y) Curves	51
		2.6.4.1 Ultimate Soil Resistance	52
		2.6.4.2 Ultimate Soil Resistance for Clays	52
		2.6.4.3 p_y – v Curves for Yielding Behavior	55
		2.6.4.4 p_y – v Curves for Stiff Clay	56
		2.6.4.5 p_y – v Curves for Sands	57
	2.6.5	p_y – v Curves for Cyclic Behavior	59
	2.6.6	Ramberg–Osgood Model (R–O) for Representation of p_y – v Curves	60
2.7		One-Dimensional Simulation of Retaining Structures	60
	2.7.1	Calculations for Soil Modulus, E_s	62
		2.7.1.1 Terzaghi Method	62
	2.7.2	Nonlinear Soil Response	62
		2.7.2.1 Ultimate Soil Resistance	62
		2.7.2.2 p_y – v Curves	63
2.8		Axially Loaded Piles	64
	2.8.1	Boundary Conditions	66
	2.8.2	Tip Behavior	67
	2.8.3	Soil Resistance Curves at Tip	68
	2.8.4	Finite Difference Method for Axially Loaded Piles	68
	2.8.5	Nonlinear Axial Response	69
	2.8.6	Procedure for Developing τ_s – u (t – z) Curves	69
		2.8.6.1 Steps for Construction of τ_s – u (t – z) Curves	69
2.9		Torsional Load on Piles	70
	2.9.1	Finite Difference Method for Torsionally Loaded Pile	72
	2.9.2	Finite Element Method for Torsionally Loaded Pile	73
	2.9.3	Design Quantities	74

2.10	Examples	74
2.10.1	Example 2.4: p_y - v Curves for Normally Consolidated Clay	74
2.10.2	Example 2.5: Laterally Loaded Pile in Stiff Clay	81
2.10.2.1	Development of p_y - v Curves	83
2.10.3	Example 2.6: p_y - v Curves for Cohesionless Soil	88
2.10.4	Simulation of p_y - v Curve by Using Ramberg-Osgood Model	92
2.10.5	Example 2.7: Axially Loaded Pile: τ_s - u (t - z), q_p - u_p Curves	95
2.10.5.1	τ_s - u Behavior	95
2.10.5.2	Parameter, m	101
2.10.5.3	Back Prediction for τ_s - u Curve	102
2.10.5.4	Tip Resistance	102
2.10.6	Example 2.8: Laterally Loaded Pile—A Field Problem	104
2.10.6.1	Linear Analysis	104
2.10.6.2	Incremental Nonlinear Analysis	105
2.10.7	Example 2.9: One-Dimensional Simulation of Three-Dimensional Loading on Piles	106
2.10.8	Example 2.10: Tie-Back Sheet Pile Wall by One-Dimensional Simulation	108
2.10.9	Example 2.11: Hyperbolic Simulation for p_y - v Curves	110
2.10.10	Example 2.12: p_y - v Curves from 3-D Finite Element Model	115
2.10.10.1	Construction of p_y - v Curves	117
	Problems	120
	References	134

Chapter 3

	Two- and Three-Dimensional Finite Element Static Formulations and Two-Dimensional Applications	139
3.1	Introduction	139
3.2	Finite Element Formulations	139
3.2.1	Element Equations	144
3.2.2	Numerical Integration	146
3.2.3	Assemblage or Global Equation	146
3.2.4	Solution of Global Equations	148
3.2.5	Solved Quantities	148
3.3	Nonlinear Behavior	148
3.4	Sequential Construction	149
3.4.1	Dewatering	151
3.4.2	Embankment	152
3.4.2.1	Simulation of Embankment	152
3.4.3	Excavation	154

	3.4.3.1	Installation of Support Systems.....	155
	3.4.3.2	Superstructure.....	156
3.5	Examples		156
	3.5.1	Example 3.1: Footings on Clay.....	156
	3.5.2	Example 3.2: Footing on Sand	160
	3.5.3	Example 3.3: Finite Element Analysis of Axially Loaded Piles.....	164
	3.5.3.1	Finite Element Analysis.....	165
	3.5.3.2	Results.....	167
	3.5.4	Example 3.4: Two-Dimensional Analysis of Piles Using Hrennikoff Method.....	173
	3.5.5	Example 3.5: Model Retaining Wall—Active Earth Pressure	177
	3.5.5.1	Finite Element Analysis.....	179
	3.5.5.2	Validations	180
	3.5.6	Example 3.6: Gravity Retaining Wall	181
	3.5.6.1	Interface Behavior	183
	3.5.6.2	Earth Pressure System.....	183
	3.5.7	Example 3.7: U-Frame, Port Allen Lock.....	184
	3.5.7.1	Finite Element Analysis.....	186
	3.5.7.2	Material Modeling	189
	3.5.7.3	Results.....	189
	3.5.8	Example 3.8: Columbia Lock and Pile Foundations....	189
	3.5.8.1	Constitutive Models	191
	3.5.8.2	Two-Dimensional Approximation	197
	3.5.9	Example 3.9: Underground Works: Powerhouse Cavern	202
	3.5.9.1	Validations	205
	3.5.9.2	DSC Modeling of Rocks.....	206
	3.5.9.3	Hydropower Project.....	206
	3.5.10	Example 3.10: Analysis of Creeping Slopes.....	215
	3.5.11	Example 3.11: Twin Tunnel Interaction.....	219
	3.5.12	Example 3.12: Field Behavior of Reinforced Earth Retaining Wall	225
	3.5.12.1	Description of Wall.....	225
	3.5.12.2	Numerical Modeling.....	227
	3.5.12.3	Construction Simulation	228
	3.5.12.4	Constitutive Models	228
	3.5.12.5	Testing and Parameters.....	230
	3.5.12.6	Predictions of Field Measurements	230
	Problems.....		235
	References		237

Chapter 4 Three-Dimensional Applications 243

4.1 Introduction 243

4.2	Multicomponent Procedure	244
4.2.1	Pile as Beam-Column	245
4.2.2	Pile Cap as Plate Bending	247
4.2.2.1	In-Plane Response	247
4.2.2.2	Lateral (Downward) Loading on Cap- Bending Response	249
4.2.3	Assemblage or Global Equations	251
4.2.4	Torsion	251
4.2.5	Representation of Soil	252
4.2.6	Stress Transfer	252
4.3	Examples	253
4.3.1	Example 4.1: Deep Beam	253
4.3.2	Example 4.2: Slab on Elastic Foundation.....	254
4.3.3	Example 4.3: Raft Foundation.....	257
4.3.4	Example 4.4: Mat Foundation and Frame System ...	258
4.3.5	Example 4.5: Three-Dimensional Analysis of Pile Groups: Extended Hrennikoff Method	261
4.3.6	Example 4.6: Model Cap–Pile Group–Soil Problem: Approximate 3-D Analysis	268
4.3.6.1	Comments	272
4.3.7	Example 4.7: Model Cap–Pile Group–Soil Problem—Full 3-D Analysis	273
4.3.7.1	Properties of Materials	273
4.3.7.2	Interface Element.....	275
4.3.8	Example 4.8: Laterally Loaded Piles—3-D Analysis	276
4.3.8.1	Finite Element Analysis.....	277
4.3.8.2	Results.....	280
4.3.9	Example 4.9: Anchor–Soil System.....	280
4.3.9.1	Constitutive Models for Sand and Interfaces	281
4.3.10	Example 4.10: Three-Dimensional Analysis of Pavements: Cracking and Failure.....	283
4.3.11	Example 4.11: Analysis for Railroad Track Support Structures.....	289
4.3.11.1	Nonlinear Analyses	289
4.3.12	Example 4.12: Analysis of Buried Pipeline with Elbows	293
4.3.13	Example 4.13: Laterally Loaded Tool (Pile) in Soil with Material and Geometric Nonlinearities....	297
4.3.13.1	Constitutive Laws	302
4.3.13.2	Validation.....	304
4.3.14	Example 4.14: Three-Dimensional Slope.....	307
4.3.14.1	Results.....	309
	Problems	310
	References	317

Chapter 5	Flow through Porous Media: Seepage	323
5.1	Introduction	323
5.2	Governing Differential Equation	323
5.2.1	Boundary Conditions	324
5.3	Numerical Methods	326
5.3.1	Finite Difference Method	327
5.3.1.1	Steady-State Confined Seepage	327
5.3.1.2	Time-Dependent Free Surface Flow Problem	329
5.3.1.3	Implicit Procedure	330
5.3.1.4	Alternating Direction Explicit Procedure (ADEP)	330
5.3.2	Example 5.1: Transient Free Surface in River Banks	336
5.4	Finite Element Method	338
5.4.1	Confined Steady-State Seepage	339
5.4.1.1	Velocities and Quantity of Flow	340
5.4.2	Example 5.2: Steady Confined Seepage in Foundation of Dam	341
5.4.2.1	Hydraulic Gradients	344
5.4.3	Steady Unconfined or Free Surface Seepage	345
5.4.3.1	Variable Mesh Method	346
5.4.4	Unsteady or Transient Free Surface Seepage	349
5.4.5	Example 5.3: Steady Free Surface Seepage in Homogeneous Dam by VM Method	350
5.4.6	Example 5.4: Steady Free Surface Seepage in Zoned Dam by VM Method	351
5.4.7	Example 5.5: Steady Free Surface Seepage in Dam with Core and Shell by VM Method	351
5.4.8	Example 5.6: Steady Confined/Unconfined Seepage through Cofferdam and Berm	353
5.4.8.1	Initial Free Surface	357
5.5	Invariant Mesh or Fixed Domain Methods	357
5.5.1	Residual Flow Procedure	358
5.5.1.1	Finite Element Method	360
5.5.1.2	Time Integration	362
5.5.1.3	Assemblage Global Equations	363
5.5.1.4	Residual Flow Procedure	363
5.5.1.5	Surface of Seepage	365
5.5.1.6	Comments	365
5.6	Applications: Invariant Mesh Using RFP	367
5.6.1	Example 5.7: Steady Free Surface in Zoned Dam	367
5.6.2	Example 5.8: Transient Seepage in River Banks	367
5.6.3	Example 5.9: Comparisons between RFP and VI Methods	369

5.6.4	Example 5.10: Three-Dimensional Seepage	370
5.6.5	Example 5.11: Combined Stress, Seepage, and Stability Analysis	373
5.6.6	Example 5.12: Field Analysis of Seepage in River Banks	383
5.6.7	Example 5.13: Transient Three-Dimensional Flow.....	385
5.6.8	Example 5.14: Three-Dimensional Flow under Rapid Drawdown	390
5.6.9	Example 5.15: Saturated–Unsaturated Seepage	392
Problems		397
Appendix A		398
One-Dimensional Unconfined Seepage		398
Finite Element Method		398
References		405

Chapter 6	Flow through Porous Deformable Media: One-Dimensional Consolidation.....	409
6.1	Introduction	409
6.2	One-Dimensional Consolidation	409
6.2.1	Review of One-Dimensional Consolidation.....	409
6.2.2	Governing Differential Equations	410
6.2.2.1	Boundary Conditions	411
6.2.3	Stress–Strain Behavior	412
6.2.3.1	Boundary Conditions	413
6.3	Nonlinear Stress–Strain Behavior	414
6.3.1	Procedure 1: Nonlinear Analysis	414
6.3.2	Procedure 2: Nonlinear Analysis	416
6.3.2.1	Settlement	416
6.3.3	Alternative Consolidation Equation	416
6.3.3.1	Pervious Boundary	417
6.3.3.2	Impervious Boundary at $2H$	417
6.4	Numerical Methods	418
6.4.1	Finite Difference Method	418
6.4.1.1	FD Scheme No. 1: Simple Explicit	418
6.4.1.2	FD Scheme No. 2: Implicit, Crank– Nicholson Scheme.....	419
6.4.1.3	FD Scheme No. 3: Another Implicit Scheme	419
6.4.1.4	FD Scheme No. 4A: Special Explicit Scheme	419
6.4.1.5	FD Scheme No. 4B: Special Explicit.....	420
6.4.2	Finite Element Method	420
6.4.2.1	Solution in Time	423
6.4.2.2	Assemblage Equations	425
6.4.2.3	Boundary Conditions or Constraints	425

	6.4.2.4	Solution in Time	426
	6.4.2.5	Material Parameters.....	426
6.5	Examples		426
6.5.1	Example 6.1: Layered Soil—Numerical Solutions by Various Schemes		426
6.5.2	Example 6.2: Two-Layered System.....		428
6.5.3	Example 6.3: Test Embankment on Soft Clay.....		429
6.5.4	Example 6.4: Consolidation for Layer Thickness Increases with Time		432
6.5.5	Example 6.5: Nonlinear Analysis.....		432
6.5.6	Example 6.6: Strain-Based Analysis of Consolidation in Layered Clay		436
	6.5.6.1	Numerical Example	442
6.5.7	Example 6.7: Comparison of Uncoupled and Coupled Solutions.....		442
	6.5.7.1	Uncoupled Solution.....	443
	6.5.7.2	Coupled Solution.....	445
	6.5.7.3	Numerical Example	446
References			448

Chapter 7	Coupled Flow through Porous Media: Dynamics and Consolidation.....		451
7.1	Introduction		451
7.2	Governing Differential Equations		451
	7.2.1	Porosity.....	451
	7.2.2	Constitutive Laws	454
	7.2.2.1	Volumetric Behavior.....	455
7.3	Dynamic Equations of Equilibrium		456
7.4	Finite Element Formulation.....		457
	7.4.1	Time Integration: Dynamic Analysis.....	460
	7.4.1.1	Newmark Method	460
	7.4.2	Cyclic Unloading and Reloading.....	463
	7.4.2.1	Parameters	466
	7.4.2.2	Reloading.....	467
7.5	Special Cases: Consolidation and Dynamics-Dry Problem ..		468
	7.5.1	Consolidation.....	468
	7.5.1.1	Dynamics-Dry Problem.....	470
	7.5.2	Liquefaction.....	471
7.6	Applications.....		474
	7.6.1	Example 7.1: Dynamic Pile Load Tests: Coupled Behavior	474
	7.6.1.1	Simulation of Phases.....	478
	7.6.2	Example 7.2: Dynamic Analysis of Pile- Centrifuge Test including Liquefaction.....	483

- 7.6.2.1 Comparison between Predictions and Test Data 488
- 7.6.3 Example 7.3: Structure–Soil Problem Tested Using Centrifuge 491
 - 7.6.3.1 Material Properties 493
 - 7.6.3.2 Results..... 497
- 7.6.4 Example 7.4: Cyclic and Liquefaction Response in Shake Table Test..... 498
 - 7.6.4.1 Results..... 500
- 7.6.5 Example 7.5: Dynamic and Consolidation Response of Mine Tailing Dam 501
 - 7.6.5.1 Material Properties 509
 - 7.6.5.2 Finite Element Analysis..... 510
 - 7.6.5.3 Dynamic Analysis 511
 - 7.6.5.4 Earthquake Analysis..... 511
 - 7.6.5.5 Design Quantities 513
 - 7.6.5.6 Liquefaction 514
 - 7.6.5.7 Results..... 514
 - 7.6.5.8 Validation for Flow Quantity..... 515
 - 7.6.5.9 Q_x across a–b–c–d (Figure 7.40) 516
- 7.6.6 Example 7.6: Soil–Structure Interaction: Effect of Interface Response 517
 - 7.6.6.1 Comparisons 518
- 7.6.7 Example 7.7: Dynamic Analysis of Simple Block... 521
- 7.6.8 Example 7.8: Dynamic Structure–Foundation Analysis..... 523
 - 7.6.8.1 Results..... 528
- 7.6.9 Example 7.9: Consolidation of Layered Varved Clay Foundation 530
 - 7.6.9.1 Material Properties 530
 - 7.6.9.2 Field Measurements..... 534
 - 7.6.9.3 Finite Element Analysis..... 534
- 7.6.10 Example 7.10: Axisymmetric Consolidation..... 536
 - 7.6.10.1 Details of Boundary Conditions 537
 - 7.6.10.2 Results..... 539
- 7.6.11 Example 7.11: Two-Dimensional Nonlinear Consolidation..... 540
 - 7.6.11.1 Results..... 540
- 7.6.12 Example 7.12: Subsidence Due to Consolidation 542
 - 7.6.12.1 Linear Analysis: Set 1..... 543
 - 7.6.12.2 Nonlinear Analysis 545
- 7.6.13 Example 7.13: Three-Dimensional Consolidation... 545
- 7.6.14 Example 7.14: Three-Dimensional Consolidation with Vacuum Preloading 547
- References 552
