
Contents

Preface.....xi

Chapter 1 Soil Solid Phase..... 1

1.1 Introduction 1

1.2 Soil Phases..... 1

1.3 Soil Texture..... 3

1.4 Soil Mineralogy 7

1.5 Soil Structure..... 10

1.6 Summary 13

1.7 Derivations..... 14

1.8 Problems 16

Chapter 2 Soil Water Content and Potential 17

2.1 Introduction 17

2.2 Energy and Work 17

2.3 Properties of Bulk Water 18

2.4 Properties of Water at Air and Solid Interfaces 24

2.5 Soil Water Content..... 28

2.6 Measuring Soil Water Content 30

2.6.1 Gravimetric Methods..... 30

2.6.2 Time Domain Reflectometry 31

2.6.3 Neutron Thermalization 33

2.6.4 Capacitance Devices..... 34

2.7 Soil Water Potential 35

2.7.1 Gravitational Component..... 37

2.7.2 Hydrostatic Component 39

2.7.3 Solute Component..... 42

2.7.4 Matric Component..... 43

2.7.5 Air Pressure Component..... 44

2.7.6 Total Soil Water Potential 45

2.8 Measuring Soil Water Potential Components..... 46

2.8.1 Tensiometers 46

2.8.2 Piezometers..... 49

2.8.3 Thermocouple Psychrometers 53

2.8.4 Heat Dissipation Sensors 54

2.8.5 Electrical Resistance Sensors 55

2.8.6 Tension Plates and Pressure Chambers 55

2.8.6.1 Tension Plates..... 56

2.8.6.2 Pressure Chambers 58

2.8.6.3 Pressure Chambers with Disturbed Samples..... 59

2.9	The Soil Water Retention Curve.....	60
2.9.1	Texture and Structure Effects.....	60
2.9.2	Plant Available Water	61
2.9.3	Hysteresis in the Soil Water Retention Curve	62
2.9.4	Soil Water Retention Curve Equations.....	65
2.10	RETc Program.....	73
2.11	Summary	79
2.12	Derivations.....	79
2.12.1	Capillary Rise Law.....	79
2.12.2	Hydraulic Capacity Function for van Genuchten Equation.....	80
2.13	Problems	80
Chapter 3	Steady Water Flow in Soils	85
3.1	Introduction	85
3.2	Steady Flow in Saturated Soil	85
3.2.1	Poiseuille Equation.....	85
3.2.2	Darcy Equation.....	86
3.2.3	Saturated Flow Parameters.....	90
3.2.4	Flow Perpendicular to Layers.....	93
3.2.5	Flow Parallel to Layers	96
3.2.6	Flow to a Drain	96
3.3	Steady Flow in Unsaturated Soil	97
3.3.1	Buckingham–Darcy Equation	98
3.3.2	Unsaturated Hydraulic Conductivity	98
3.3.3	Macroscopic Capillary Length.....	100
3.3.4	Analytical Solutions for Steady Flow	104
3.3.4.1	Infiltration to a Water Table	105
3.3.4.2	Infiltration from a Ring.....	106
3.3.4.3	Infiltration from a Borehole	108
3.4	Measurements of Hydraulic Properties	109
3.4.1	Laboratory Methods	109
3.4.2	Field Methods	111
3.4.3	Pedotransfer Functions	113
3.5	Summary	116
3.6	Derivations.....	117
3.6.1	Poiseuille Equation	118
3.6.2	The Drainage Ellipse Equation	121
3.6.3	The van Genuchten $K(S_e)$ Function.....	122
3.6.4	Relationship between the Gardner Exponent and Macroscopic Capillary Length.....	124
3.6.5	Steady Infiltration to a Water Table	125
3.6.6	The Falling-Head Method	127
3.7	Problems	128

Chapter 4 Heat Flow in Soils 131

4.1 Introduction 131

4.2 Surface Energy Balance 131

4.3 Steady Soil Heat Flux 135

4.4 Transient Soil Heat Flux 137

4.4.1 Heat Transport Equation..... 137

4.4.2 Analytical Solutions to the Heat Transport Equation..... 142

4.4.3 Numerical Solutions to the Heat Flow Equation 150

4.5 Soil Heat Flow with HYDRUS-1D 159

4.6 Summary 165

4.7 Derivations..... 166

4.7.1 Properties of the Laplace Transform 167

4.7.2 Laplace Transform Solution to the Heat Flow Equation 169

4.7.3 Properties of the Complementary Error Function..... 173

4.8 Problems 175

Chapter 5 Transient Water Flow in Soils 183

5.1 Introduction 183

5.2 Transient Water Flow..... 183

5.2.1 The Richards Equation 183

5.2.2 Initial Conditions 185

5.2.3 Boundary Conditions..... 186

5.2.3.1 System-Independent Boundary Conditions 186

5.2.3.2 System-Dependent Boundary Conditions..... 187

5.3 Numerical Solutions to the Richards Equation 188

5.4 Infiltration 192

5.4.1 Infiltration into a Uniform Soil..... 192

5.4.2 Soil Crusts and Subsurface Layers 200

5.4.3 Infiltration Equations..... 205

5.4.3.1 Green–Ampt Equations 205

5.4.3.2 Curve Number Approach..... 209

5.4.4 Borehole Infiltration..... 211

5.4.5 Subsurface Irrigation 212

5.5 Redistribution 214

5.6 Evaporation..... 216

5.7 Transpiration..... 217

5.8 Preferential Flow 221

5.8.1 Macropores 223

5.8.2 Fingering and Funnel Flow..... 226

5.8.3 Capillary Barriers 228

5.9 Groundwater Recharge and Discharge 230

5.10 Inverse Solutions and Parameter Optimization 235

5.11	Summary	241
5.12	Derivations.....	242
5.13	Problems	245
Chapter 6	Solute Transport	249
6.1	Introduction	249
6.2	Conservation and Flux Equations.....	249
6.2.1	Conservation Equation	249
6.2.2	Transport Processes.....	250
6.2.2.1	Advection	250
6.2.2.2	Diffusion	250
6.2.2.3	Hydrodynamic Dispersion	252
6.3	Advection Dispersion Equation	256
6.3.1	Analytical Solution	257
6.3.2	Breakthrough Curves.....	260
6.3.3	Pulse Inputs	263
6.3.4	Equilibrium Adsorption and the Advection Dispersion Equation....	267
6.3.4.1	Linear Equilibrium Adsorption	268
6.3.4.2	Nonlinear Equilibrium Adsorption.....	274
6.3.5	Transformations and the Advection Dispersion Equation.....	275
6.3.6	Volatilization and the Advection Dispersion Equation	277
6.3.7	Flux vs. Resident Concentrations	280
6.3.8	Nonequilibrium Solute Transport.....	281
6.3.8.1	Physical Nonequilibrium	281
6.3.8.2	Chemical Nonequilibrium	285
6.3.9	Stochastic Advection Dispersion Equation.....	286
6.4	STANMOD and CXTFIT	290
6.4.1	Direct Mode.....	290
6.4.2	Inverse Mode and Parameter Optimization.....	293
6.5	Numerical Approaches for Solute Transport.....	301
6.5.1	Finite Difference Approach	302
6.5.2	Finite Element Approach	304
6.5.3	Stability and Oscillations.....	305
6.6	HYDRUS Examples of Solute Transport	307
6.6.1	Nonlinear Adsorption and Transport.....	307
6.6.2	Transport of Nitrogen Species	313
6.6.3	Parameter Optimization of Nitrogen Species Model.....	317
6.6.4	Solute Transport in the Capillary Fringe.....	322
6.7	Summary	325
6.8	Derivations.....	327
6.8.1	Laplace Transform Solution to ADE	327
6.8.2	Expected Value for the Lognormal Distribution	335
6.8.3	Numerical Dispersion	337
6.8	Problems	339

Appendix..... 347
