Preface	XIII
<i>1 Constitutive relations for geomaterials</i>	
<i>1.1 Mathematical formulation</i>	
On constitutive models for geosynthetics: Recent advances <i>A.P.S. Selvadurai & Q. Yu</i>	3
Mechanical constitutive framework for thermal effects on unsaturated soils <i>B. François, M. Nuth & L. Laloui</i>	9
On chemical degradation of properties of chalk <i>S. Pietruszczak, D. Lydzba & J.F. Shao</i>	15
Factors affecting three-dimensional failure in soils <i>P.V. Lade</i>	21
Elasto-plastic microplane model for geotechnical applications <i>P.C. Prat, F.A. Sánchez & N. González</i>	27
Micromechanical formulation of stress dilatancy and its implications on the flow rule <i>R.G. Wan, F. Nicot & F. Darve</i>	35
Multiscale elastoplastic and damage modelling of hard clay <i>A.A. Guery, F. Cormery, J.F. Shao & D. Kondo</i>	43
A new model of plasticity-damage coupling for saturated porous media <i>V. Monchiet, E. Charkaluk, J.F. Shao & D. Kondo</i>	49
Modelling the effect of temperature on unsaturated swelling clays <i>M. Sánchez, M.V. Villar, A. Gens, S. Olivella & L. do N. Guimarães</i>	57
Application of a novel micro-polar media to the brittle materials: Role of porosity and characteristic length <i>J. Jeong, H. Adib-Ramezani & M. Al-Mukhtar</i>	63
A critical state model for bonded geomaterials <i>H.S. Yu & S.M. Tan</i>	71
SANICLAY: A new simple anisotropic clay plasticity model <i>A.G. Papadimitriou, Y.F. Dafalias & M.T. Manzari</i>	79
Description of induced anisotropy of soils using isotropic hardening rule in modified stress space <i>M. Kikumoto, H. Kyokawa, T. Nakai, F. Zhang & M. Hinokio</i>	85
Development of a modified Duncan-Chang model for soils <i>K.-H. Lee, Y.T. Ju, D.S. Shin & G.N. Pande</i>	93

Proposition for a simple volume change model for expansive saturated soils <i>O.P. Buzzi, S.G. Fityus & S.W. Sloan</i>	99
 <i>1.2 Modelling of instabilities and localized deformation</i>	
Instabilities in granular media, an overall picture from micro to macro scale <i>F. Darve, L. Sibille, F. Prunier, S. Lignon, F. Donze, B. Chareyre & F. Nicot</i>	107
Bifurcation in granular materials: Micro-mechanical bases <i>F. Nicot & F. Darve</i>	113
On simulation of shear band propagation in trapdoor-tests <i>E. Saurer & A.M. Puzrin</i>	119
Deterministic and statistical size effect during shearing of granular layer <i>J. Tejchman & J. Górski</i>	125
 <i>1.3 Laboratory tests; identification of material parameters</i>	
Soil structure evolution: Experimental and constitutive consideration <i>A. Koliji, L. Vulliet & L. Laloui</i>	133
Compaction bands in high porosity soft rocks <i>R. Castellanza, E. Gerolymatou & R. Nova</i>	139
Anisotropic stiffness of Hostun sand <i>T. Sadek, M. Lings, L. Dihoru & D. Muir Wood</i>	147
Estimation of shear modulus from seismic tests on Pliocene clays <i>K. Markowska-Lech, M. Lech & A. Szymanski</i>	153
Spatial stress fluctuations: Acoustic evidence and numerical simulations <i>A. Niemunis, T. Wichtman & Th. Triatafyllidis</i>	159
Characterization of crack networks in desiccating soils using image analysis techniques <i>M.R. Lakshmikantha, P.C. Prat & A. Ledesma</i>	167
 <i>2 Numerical algorithms: formulation and performance</i>	
Parallelising the Boundary Element Method using ParaFEM <i>I.M. Smith, L. Margetts, G. Beer & C. Duenser</i>	177
Continuous tunnel excavation in a poro-elastoplastic medium <i>G. Anagnostou</i>	183
Formulation and validation of a quasi-static Material Point Method <i>L. Beuth, T. Benz, P.A. Vermeer, C.J. Coetzee, P. Bonnier & P. van den Berg</i>	189
Uniqueness and stability of plane boundary value problems in finite element description <i>A. Rohe, F. Molenkamp & W.T. van Horssen</i>	197
A three-invariant non-associative plasticity model for hard rocks: Implicit integration and strain localization analysis <i>D. Boldini, R.I. Borja & P.F. Sanz</i>	205
Numerical integration of elasto-plastic constitutive models using the extrapolation method <i>W.T. Solowski & D. Gallipoli</i>	211

Alternative stress integration schemes in large deformation problems of geomechanics <i>M. Nazem, D. Sheng & A.J. Abbo</i>	219
A stochastic element free seepage flow analysis of heterogeneous subsurface <i>H.M. Kim & J. Inoue</i>	225
Shakedown analysis of cohesive-frictional materials using adaptive remeshing <i>K. Krabbenhoft, A.V. Lyamin & S.W. Sloan</i>	233
Finite element modelling of penetration problems in geomechanics <i>D. Sheng</i>	239
FE-investigations of granular flow in silos using an uncoupled ALE-formulation and a non-local hypoplastic model <i>M. Wojcik & J. Tejchman</i>	247
Three-dimensional Mohr-Coulomb limit analysis using semidefinite programming <i>K. Krabbenhoft, A.V. Lyamin & S.W. Sloan</i>	255
 3 Modelling of transient/coupled problems	
Low level radioactive waste disposal – modelling the behaviour of a potential repository <i>S.C. Seetharam, B. Deneva & H.R. Thomas</i>	263
Modelling of the hydromechanical response of a shaft sinking in a deep claystone <i>M. Souley, G. Armand, K. Su & Y. Wileveau</i>	269
Mechanisms of desiccation cracking of soil: Validation <i>H. Peron, L.B. Hu, L. Laloui & T. Hueckel</i>	277
Multicomponent chemical and gas transfer in unsaturated soil – integrated impact assessment. <i>H.R. Thomas & S.C. Seetharam</i>	283
Oedometric consolidation of a fluid-saturated composite <i>A.P.S. Selvadurai & H. Ghiabi</i>	289
Simultaneous leakage and diffusion of organic pollutants through damaged geomembranes <i>A. El-Zein & R.K. Rowe</i>	297
Numerical simulation of the ground deformation due to methane hydrate dissociation by a chemo-thermo-mechanically coupled analysis <i>S. Kimoto, F. Oka, T. Fushita & M. Fujiwaki</i>	303
Numerical modelling and the implementation of artificial ground freezing <i>A. Sres & G. Anagnostou</i>	311
Evaluation of grout concentration during grouting process based on convective dispersive flow model <i>A. Ait Alaïwa, N. Saiyouri & P-Y. Hicher</i>	317
Modeling the permeability evolution of a grouted soil, with special emphasis on filtration <i>F. Bouchelaghem</i>	323
Location of the fluid front in hydraulic fracturing of rocks <i>H.P. Jostad & F. Cuisiat</i>	329
A comment on the similarity of the coupled consolidation models with point-symmetry <i>E. Imre, M. Farkas & P. Rózsa</i>	337

4 Application of numerical techniques to practical problems

4.1 Tunnels and underground structures

Determination of soil parameters from an inverse analysis of a tunnel excavation <i>S. Eclaircy-Caudron, D. Dias & R. Kastner</i>	347
Strain softening analysis of tunnel excavation with a multilaminate model <i>V. Galavi & H.F. Schweiger</i>	353
Comparison of different approaches to model compensation grouting <i>J.N. Franzius, F.C. Schroeder, A. Grammatikopoulou, Z. Cabarkapa, K.G. Higgins & D.M. Potts</i>	359
Abandoned mine remediation measures by chamber filling with granular materials <i>R. Castellanza, E. Gerolymatou & R. Nova</i>	365
3D Modelling for effects of tunnelling on existing support systems <i>H.Y. Liu, J.C. Small & J.P. Carter</i>	373
Application of a Multilaminate Model for Soil to tunnel excavation <i>F. Scharinger, H.F. Schweiger & G.N. Pande</i>	381
Numerical study of fracture openings by tunnelling in fractured rock mass <i>P. Alfonsi, O. Fouché & E. Bourgeois</i>	387
Numerical analysis of interaction between underground caverns <i>H.C. Chua & E.C. Leong</i>	393
Parametric studies of an underground excavation in jointed rock mass <i>G. Arunakumari & G. Madhavi Latha</i>	399
Stability analysis of 3D square trapdoors in cohesive soil <i>J. Xie, M.J. Gunn & A. Rahim</i>	405

4.2 Foundations: Footings, piles, etc.

Simulation of footings under inclined loads using different constitutive models <i>J. Hintner, P.A. Vermeer & P.A. von Wolfersdorff</i>	413
A numerical study on the effect of ageing on undrained bearing capacity <i>T.M. Bodas Freitas, D.M. Potts & L. Zdravković</i>	419
Modelling of suction caissons using two- and three-dimensional finite element method <i>L.N. Equihua & P. Foray</i>	425
Arching in soils <i>R.L. Michalowski & N. Park</i>	433
Ultimate lateral resistance of sheet pile walls by numerical lower bound analysis <i>M. Huang & Qi-wu Huang</i>	439
Behaviour of a laterally loaded pile <i>V.S. Kumar, K.G. Sharma & A. Varadarajan</i>	447
Numerical modelling of large diameter steel piles under monotonic and cyclic horizontal loading <i>M. Achmus, K. Abdel-Rahman & Y.-S. Kuo</i>	453

Numerical simulation of the installation of a displacement pile in sand <i>J. Dijkstra, W. Broere & A.F. van Tol</i>	461
Numerical model to predict the propagation of particle velocity values during vibratory pile-driving <i>F. Rocher-Lacoste & J.F. Semblat</i>	467
Improved embedded beam elements for the modelling of piles <i>H.K. Engin, E.G. Septanika & R.B.J. Brinkgreve</i>	475
Reliability of rigid piles subjected to lateral loads: A response surface approach <i>W. Pula & A. Rózański</i>	481
Reliability of strength of a free head laterally loaded pile embedded in soft clay <i>S. Lee, B.B. Budkowska & R. Balachandar</i>	489
Numerical modelling of deep mixed columns with volume averaging technique <i>U. Vogler & M. Karstunen</i>	495
Performance of partially penetrating stone columns during an earthquake <i>A. Noorzad, H.B. Poorooshab & M.R. Madhav</i>	503
Bearing capacity of offshore gravity platforms by 3D FEM <i>L. Andresen, K.H. Andersen, H.P. Jostad & A. Rahim</i>	509
Numerical analysis of the effect of sleepers on the lateral displacement of railway track <i>A.E. Emdal, G. Priol, G. Grimstad & A.H. Løhren</i>	517
Probabilistic FEM analysis of railway-platform settlements <i>J. Dubost, A. Denis, A. Marache & M. Chanson</i>	525
FEM analyses of non-dimensional models of a pile wall <i>H.V. Kojc & S. Škrabl</i>	531
 <i>4.3 Slopes and embankments</i>	
A 3D finite element study of slope reliability <i>W.A. Spencer & M.A. Hicks</i>	539
Numerical study of the stability of a partially saturated soil slope <i>K. Georgiadis, D.M. Potts & L. Zdravković</i>	545
Finite element analysis of two landslides with the second order work criterion <i>H.D.V. Khoa, F. Prunier, F. Darve & F. Laouafa</i>	551
Analytical and numerical analysis of slopes reinforced by the Deep Mixing Method <i>G. Priol, L. Grande & R. Aabøe</i>	559
Finite element simulation for the collapse of a dip slope during earthquake <i>A. Wakai, K. Ugai, A. Onoue, K. Higuchi & S. Kuroda</i>	567
Finite element back-analysis of trial bank at Empingham Dam <i>N. Kovacevic, K.G. Higgins & D.M. Potts</i>	575
Calculated and observed behaviour of subsoil under a reinforced embankment <i>Z.Y. Yin & P.Y. Hicher</i>	583
Effect of wall and soil permeability on the long-term ground movements adjacent to a deep excavation <i>L. Zdravković, A. Tsiamposi & D.M. Potts</i>	589

A study on the behaviour of a railway embankment: In-situ monitoring and numerical analysis	595
<i>A. Giacomini, G.P. Giani & F. Mari</i>	
Geo-hydrologic design procedure for peat dykes under drying conditions	603
<i>J.M. van Esch, M.A. Van, R.F.A. Hendriks, J.J.H. van den Akker, U. Forster & R.J.G. van Etten</i>	
Influence of existing load on excavation problems – model tests and numerical simulation	611
<i>T. Nakai, F. Zhang, M. Kikumoto, H.M. Shahin, H. Takei, M. Niinomi & N. Iwata</i>	
<i>4.4 Applications incorporating the tools of computational intelligence</i>	
Non-uniformity of stresses within a sand specimen in triaxial shear	621
<i>Q. Fu, Y.M.A. Hashash & J. Ghaboussi</i>	
Implementation of constitutive models in computational intelligence framework	627
<i>S.I. Drakos K.-H. Lee, H.-S. Shin & G.N. Pande</i>	
Application of artificial neural network for constitutive modeling in finite element analysis	635
<i>A.A. Javadi, T.P. Tan & A.S.I. Elkassas</i>	
Optimization of parameters of constitutive models using genetic algorithms	641
<i>D.M. Pedroso & M.M. Farias</i>	
A new algorithm for training artificial neural networks for site investigation data	647
<i>H.S. Shin, S.H. Lee, G.J. Bae & S.H. Baek</i>	
Artificial neural network and support vector machine models for evaluating spatial variability of SPT data	653
<i>P. Samui & T.G. Sitharam</i>	
Neural networks for the determination of embankment safety	659
<i>A.R. Koelewijn</i>	
Soil parameter identification from in-situ measurements using a genetic algorithm and a principle component analysis	665
<i>S. Levasseur, Y. Malécot, M. Boulon & E. Flavigny</i>	
<i>4.5 Other applications</i>	
3D finite element seismic analyses of bridges and dams	673
<i>A. Mellal, S. Commend & F. Geiser</i>	
Three-dimensional non-linear finite element modeling of integral abutment bridges	679
<i>D. Perić, B.R. Shah & A. Esmaily</i>	
Critical plane approach: Application to seismic analysis of masonry structures	685
<i>R. Ushaksaraei, S. Pietruszczak & V. Gocevski</i>	
Silo music: Experimental investigations and a mechanical model	691
<i>M. Rucka, K. Wilde & J. Tejchman</i>	
Rockfall modeling: Numerical simulation of the impact of a particle on a coarse granular medium	699
<i>F. Bourrier, F. Nicot & F. Darve</i>	
DEM modeling of a cellular structure for rockfall protection based on a multiscale approach	707
<i>D. Bertrand, F. Nicot, S. Lambert & P. Gotteland</i>	

Microstructural effect on the cavity expansion in a soil cylinder <i>J.D. Zhao, D.C. Sheng & S.W. Sloan</i>	715
The effect of structure in pressuremeter tests in clay <i>N. González, M. Arroyo & A. Gens</i>	721
Repeated liquefaction and consolidation of sand: Tests and numerical simulation considering finite deformation <i>B. Ye, A. Yashima, G.L. Ye & F. Zhang</i>	729
Hysteretic damping in a small-strain stiffness model <i>R.B.J. Brinkgreve, M.H. Kappert & P.G. Bonnier</i>	737
The importance of cyclic nonlinear models in dynamic finite element analysis <i>D. Taborda, L. Zdravković, S. Kontoe & D.M. Potts</i>	743
