

Table of Contents

Preface	XIII
Scientific Committee (ERTC 7)	XV
 <i>Constitutive modelling</i>	
A non-associated creep model for structured anisotropic clay (n-SAC) <i>G. Grimstad & S.A. Degago</i>	3
A state dependent constitutive model for sand-structure interfaces <i>A. Lashkari</i>	9
Adaptive integration of hypoplasticity <i>W. Fellin, M. Mittendorfer & A. Ostermann</i>	15
An anisotropic bubble model for soft clays <i>N. Sivasithamparam, D. Kamrat-Pietraszewska & M. Karstunen</i>	21
An anisotropic model for structured soils <i>G. Belokas & M. Kavvasdas</i>	27
An examination of strain space versus stress space for the formulation of elastoplastic constitutive models <i>K.C. Ellison, K. Soga & B. Simpson</i>	33
Anisotropic small strain stiffness within the multilaminate framework <i>B. Schädlich & H.F. Schweiger</i>	39
Application of discontinuity layout optimization to problems involving non-associative friction <i>A.F. Babiker, C.C. Smith & M. Gilbert</i>	45
Associated plasticity for nonassociated frictional materials <i>K. Krabbenhoft, A.V. Lyamin & S.W. Sloan</i>	51
Comparison of methods for calculation of settlements of soft clay <i>H.P. Jostad & S.A. Degago</i>	57
Effect of yield surface shape on the simulated elasto-plastic response of cohesive soils <i>A.G. Papadimitriou, A.D. Vrana, Y.F. Dafalias & M.T. Manzari</i>	63
Impact of input data on soil model calibration using Genetic Algorithms <i>D. Taborda, A. Pedro, P.A.L.F. Coelho & D. Antunes</i>	69
Influence of destructuration of soft clay on time-dependant settlements <i>D.F.T. Nash</i>	75
Modeling liquefaction behavior of sands by means of hypoplastic model <i>A.B. Tsegaye, F. Molenkamp, R.B.J. Brinkgreve, P.G. Bonnier, R. de Jager & V. Galavi</i>	81
Modeling of creep mechanism and damage of rock salt <i>B. Leuger, K. Staudtmeister, S. Yildirim & D. Zapf</i>	89
Modeling static liquefaction within multilaminate framework <i>A.B. Tsegaye, V. Galavi, R.B.J. Brinkgreve, R. de Jager, F. Molenkamp & P.G. Bonnier</i>	95
On the differences between the Drucker-Prager criterion and exact implementation of the Mohr-Coulomb criterion in FEM calculations <i>J. Clausen, L. Andersen & L. Damkilde</i>	101

Simulation of mechanical behaviour of <i>Toyoura</i> sand using Severn Trent constitutive model <i>S. Miliziano, G.M. Rotisciani & F.M. Soccodato</i>	107
Soil parameter identification for cyclic loading <i>A. Papon, Z.-Y. Yin, K. Moreau, Y. Riou & P.-Y. Hicher</i>	113
Study of tensorial damage in a porous geomaterial <i>M. Mozayan Kharazi, C. Arson & B. Gatmiri</i>	119
Time- and stress-compressibility of clays during primary consolidation <i>S.A. Degago, H.P. Jostad, M. Olsson, G. Grimstad & S. Nordal</i>	125
Uncertainty and sensitivity analysis of laboratory test simulations using an elastoplastic model <i>F. Lopez-Caballero & A. Modaressi-Farahmand-Razavi</i>	131
Validation of empirical formulas to derive model parameters for sands <i>R.B.J. Brinkgreve, E. Engin & H.K. Engin</i>	137

Computer codes and algorithms

3D parallel computing FEA in offshore foundation design <i>L. Andresen, H. Sturm, M. Vöge & K. Skau</i>	145
70-line 3D finite deformation elastoplastic finite-element code <i>W.M. Coombs, R.S. Crouch & C.E. Augarde</i>	151
A simple time stepping algorithm for material point method <i>W.T. Solowski & D. Sheng</i>	157
Analysis of the stability of sheet pile walls using Discontinuity Layout Optimization <i>S.D. Clarke, C.C. Smith & M. Gilbert</i>	163
Application of Discontinuity Layout Optimization to geotechnical limit analysis problems <i>M. Gilbert, C.C. Smith, I.W. Haslam & T.J. Pritchard</i>	169
Enhancing solution procedures of a new numerical scheme for dynamic analysis of soil-structure interaction problems <i>M.H. Baziar & Ch. Song</i>	175
Numerical bearing capacity computation and load-displacement behavior of shallow foundations by stress level based ZEL method <i>M. Jahanandish, M. Veiskarami & A. Ghahramani</i>	181
Simple quality indicators for FE analysis based on stress maps for Gauss points <i>C. Vulpe, N. Droniuc, E. Bourgeois & Ph. Mestat</i>	187
The upper bound limit analysis of bearing capacity problems using the finite element method <i>A.I.M. AL-Janabi, A.A.R. Orabi & A.Y.A. Baqir</i>	193

Discontinuum and particulate modelling

A numerical simulation on centrifuge liquefaction model using microscopic fluid coupling scheme with Discrete Element Method <i>Y. Shimizu & Y. Inagawa</i>	201
Discrete element modeling of low strength rock <i>N.B. Yenigül & M. Alvarez Grima</i>	207
Effect of drying on a granular slope physical model analysed by Discrete Element Method (DEM) <i>F. Gabrieli, S. Cola, P. Simonini & F. Calvetti</i>	213
Isotropic compression of cohesive-frictional particles with rolling resistance <i>S. Luding</i>	219
Size effects on a virtual calibration chamber <i>J. Butlanska, M. Arroyo & A. Gens</i>	225

Large deformation – large strain analysis

A Coupled Eulerian-Lagrangian approach to solve geotechnical problems involving large deformations <i>S. Henke, G. Qiu & J. Grabe</i>	233
Advances in meshless methods with application to geotechnics <i>C.E. Heaney, C.E. Augarde, A.J. Deeks, W.M. Coombs & R.S. Crouch</i>	239
An ALE Finite Element Method for cohesionless soil at large strains: Computational aspects and applications <i>D. Aubram, F. Rackwitz & S.A. Savidis</i>	245
Analysis of dynamic penetration of objects into soil layers <i>J.P. Carter & M. Nazem</i>	251
Large deformation analysis of the installation of Dynamic Anchor <i>H. Sturm & L. Andresen</i>	255
Modelling of installation effects of driven piles using hypoplasticity <i>H.D. Pham, H.K. Engin, R.B.J. Brinkgreve, & A.F. van Tol</i>	261

Flow and consolidation

A multiscale approach for the consideration of spatial groundwater flow in the stability analysis of a large excavation pit <i>H. Montenegro & R. Kautner</i>	269
A numerical model for the electrokinetic treatment of natural soils with calcite <i>F. Cattaneo, C. Jommi & G. Musso</i>	275
Analysis of artificial ground freezing in the Pari-Duomo platform tunnel of the Naples metro <i>S. Papakonstantinou, E. Pimentel & G. Anagnostou</i>	281
Large scale hydraulic conductivity of the soil deposits of the Venezia Lagoon from numerical back-analysis <i>E. Giacomini, F. Colleselli, F. Cattaneo, C. Jommi & G. Mayerle</i>	285
Numerical analyses of granulometric stability of moraine dam cores <i>F. Federico & A. Montanaro</i>	291
Numerical prediction of time-dependent rock swelling based on an example of a major tunnel project in Ontario/Canada <i>A. Kirsch & T. Marcher</i>	297
Some features of the coupled consolidation models used for the evaluation of the dissipation test <i>E. Imre & P. Rózsa</i>	303
Steady state seepage flow through zoned earth structures affected by permeability defects <i>F. Federico, F. Calzoletti & A. Montanaro</i>	311

Unsaturated soil mechanics

A comparison between numerical integration algorithms for unsaturated soils constitutive models <i>F. Cattaneo, G. Della Vecchia, C. Jommi & G. Maffioli</i>	319
Comparison of stress update algorithms for partially saturated soil models <i>M. Hofmann, G. Hofstetter & A. Ostermann</i>	325
Modelling of the hysteretic soil–water retention curve for unsaturated soils <i>A. Tsiamposi, L. Zdravkovic & D.M. Potts</i>	331
Numerical integration and analysis of equilibrium in unsaturated multiphase media <i>R. Tamagnini, M. Mavroulidou & M.J. Gunn</i>	337

Artificial intelligence

- A genetic algorithm for solving slope stability problems: From Bishop to a free slip plane 345
R. van der Meij & J.B. Sellmeijer
- Simulation of the mechanical behavior of railway ballast by intelligent computing 351
M.A. Shahin
- Three dimensional site characterization model of Suurpelto (Finland) using support vector machine 355
A. Pijush Samui & T. Lämsivaara

Reliability and probability analysis

- Evaluation of soil variability and its consequences 363
M. Huber, P.A. Vermeer & A. Bárdossy
- Inverse modelling including spatial variability applied to the construction of a road embankment 369
A. Hommels, F. Molenkamp, M. Huber & P.A. Vermeer
- Reliability analysis of piping in embankment dam 375
A. Noorzad & M. Rohaninejad
- Spatial variability of soil parameters in an analysis of a strip footing using hypoplastic model 383
R. Suchomel & D. Mašin
- Validating models against experience in foundation engineering, using the ROC curve 389
A.M.J. Mens & A.F. van Tol

Dynamic problems and Geohazards

- A 2.5D finite element model for simulation of unbounded domains under dynamic loading 397
P. Alves Costa, R. Calçada, J. Couto Marques & A. Silva Cardoso
- A comparison of different approaches for the modelling of shallow foundations in seismic soil-structure interaction problems 405
S. Grange, D. Salciarini, P. Kotronis & C. Tamagnini
- A finite element approach for dynamic seepage flows 411
R. Stucchi, A. Cividini & G. Gioda
- A method to solve Biot's u-U formulation for soil dynamics applications using the ABAQUS/explicit platform 417
F.J. Ye, S.H. Goh & F.H. Lee
- Alternative formulations for cyclic nonlinear elastic models: Parametric study and comparative analyses 423
D. Taborda, L. Zdravkovic, S. Kontoe & D.M. Potts
- Analysis of the effect of pile length in a pile group on the transfer and impedance functions in soil-pile interaction models 429
A. Mahboubi & K. Panaghi
- Dynamic fragmentation in rock avalanches: A numerical model of micromechanical behaviour 435
K.L. Rait & E.T. Bowman
- Evaluation of the efficiency of a model of rockfall protection structures based on real-scale experiments 441
F. Bourrier, Ph. Gotteland, A. Heymann & S. Lambert
- Evaluation of viscous damping due to solid-fluid interaction in a poroelastic layer subjected to shear dynamic actions 447
J. Grazina, P.L. Pinto & D. Taborda
- Non linear numerical modeling of slopes stability under seismic loading – reinforcement effect 453
F. Hage Chehade, M. Sadek & I. Shahrou

Numerical analysis of blast impact on sealings of neighbouring structures <i>W. Krajewski, O. Reul & L. te Kamp</i>	459
Numerical analysis of the seismic behavior of vertical shaft <i>S. Jeong, Y. Kim, S. Lee, J. Jang & Y. Lee</i>	465
Numerical and experimental study of the detection of underground heterogeneities <i>P. Alfonsi, E. Bourgeois, F. Rocher-Lacoste, L. Lenti, & M. Froumentin</i>	471
Numerical modelling of impacts on granular materials with a combined discrete – continuum approach <i>A. Breugnot, Ph. Gotteland & P. Villard</i>	477
Numerical simulations of the dynamic impact force of fluidized debris flows onto structures <i>F. Federico & A. Amoroso</i>	483
Three dimensional analysis of seismic performance of an earthfill dam in Ethiopia <i>B.G. Tensay & W. Wu</i>	489

Slopes and cuts

Effect of updated geometry in analyses of progressive failure <i>A.S. Gylland & H.P. Jostad</i>	497
Evaluation of the effective width method for strip footings on slopes under undrained loading <i>K. Georgiadis & E. Skoufaki</i>	503
Failure induced pore pressure by simple procedure in LEM <i>T. Lämsivaara</i>	509
Investigation of soil property sensitivity in progressive failure <i>A.S. Gylland, M.S. Sayd, H.P. Jostad & S. Bernander</i>	515
Short-term slope stability calculation according to Eurocode 7 <i>V. Thakur, S. Nordal & S. Hove</i>	521

Embankments, shallow foundations, and settlements

3D settlement analysis using GIS and FEM: A case study in Slidrecht area, the Netherlands <i>N.B. Yenigül & A.S. Elkadi</i>	529
A comparison of 1D, 2D, and 3D settlement analyses of the Tower of Pisa <i>A.J. Klettke & L. Edgers</i>	535
Analysis of a full scale failure test on old railway embankment <i>J. Mansikkamäki & T. Lämsivaara</i>	541
Analysis of ground movements induced by diaphragm wall installation <i>B. Garitte, M. Arroyo & A. Gens</i>	547
Bearing capacity of a surface footing founded on a layered clay subsoil <i>Z. Bournta & L. Zdravkovic</i>	553
Finite element analysis of the main embankment at Empingham dam <i>A. Grammatikopoulou, N. Kovacevic, L. Zdravkovic & D.M. Potts</i>	557
Forecasting of the stability of the tailing dam in permafrost region on the basis of numerical methods <i>A.B. Lolaev, A.P. Akopov, A.Kh. Oganessian, M.N. Sumin & V.V. Butygin</i>	563
Numerical modeling of the mechanical response of recycled materials in embankments <i>M.M. Villani, X. Liu, A. Scarpas & A. D'Andrea</i>	569
Rail track structural analysis using three-dimensional numerical models <i>A. Paixão & E. Fortunato</i>	575

Three dimensional analyses of ring foundations <i>M. Laman, A. Yildiz, M. Ornek & A. Demir</i>	581
 <i>Piles</i>	
A back analysis of vertical load tests on bored piles in granular soil <i>L. Tosini, A. Cividini & G. Gioda</i>	589
A numerical study on the effects of time on the axial load capacity of piles in soft clays <i>K.P. Giannopoulos, L. Zdravkovic & D.M. Potts</i>	595
Analysis of foundation solution of new building in built-up area <i>Ž. Arbanas, V. Jagodnik & S. Dugonjić</i>	601
Collapse of thin-walled model piles during hard driving <i>J. Bergan, S. Øren Holo & S. Nordal</i>	607
Dynamic analysis of large diameter piles Statnamic load test <i>K.J. Bakker, F.J.M. Hoefsloot & E. de Jong</i>	613
Finite difference analysis of pile on sloping ground under passive loading <i>K. Muthukkumaran & M. Gokul Krishnan</i>	619
Ground displacements due to pile driving in Gothenburg clay <i>T. Edstam & A. Kullingsjö</i>	625
Lateral loading of pile foundations due to embankment construction <i>A. Feddema, J. Bredevelde & A.F. van Tol</i>	631
Modelling of piled rafts with different pile models <i>S.W. Lee, W.W.L. Cheang, W.M. Swolfs & R.B.J. Brinkgreve</i>	637
Modelling performance of jack-in piles <i>S. Jie & S.-A. Tan</i>	643
Numerical analyses of axial load capacity of rock socketed piles in Turkey <i>M. Kirkit, H. Kılıç & C. Akgüner</i>	649
Numerical simulation of low-strain integrity tests on model piles <i>J. Fischer, C. Missal, M. Breustedt & J. Stahlmann</i>	655
Response of pile groups in clays under lateral loading based on 3-D numerical experiments <i>E.M. Comodromos, M.C. Papadopoulou & I.K. Rentzeperis</i>	661
Selection of the proper hammer in pile driving and estimation of the total driving time <i>A. Afshani, A. Fagher & M. Palassi</i>	667
Settlement analysis of a large piled raft foundation <i>M. Wehnert, T. Benz, P. Gollub & T. Cubaleski</i>	673
Study of a complex deep foundation system using 3D Finite Element analysis <i>F. Tschuchnigg & H.F. Schweiger</i>	679
The influence of pile displacement on soil plug capacity of open-ended pipe pile in sand <i>L. Sa, L. Grande, H. Jianchuan & L. Guohui</i>	685
 <i>Deep excavations and retaining walls</i>	
3D modelling of a deep excavation in a sloping site for the assessment of induced ground movements <i>O.J. Gastebled & S. Bagheri</i>	693
Analysis of an excavation in asymmetrical soil conditions: The Marquês station <i>A. Pedro, J. Almeida e Sousa, D. Taborda & P. França</i>	699
Comparison of finite element predictions with results from a centrifuge test representing a double anchor wall in sand <i>P.J. Bourne-Webb, D.M. Potts & D. König</i>	705

Crane monopile foundation analysis <i>A. Mar</i>	711
Influence of excavation and wall geometry on the base stability of excavations in soft clays <i>T. Akhlaghi, H. Norouzi & P. Hamidi</i>	717
Numerical modelling of a steel sheet-pile quay wall for the harbour of Ravenna, Italy <i>D. Segato, V.M.E. Fruzzetti, P. Ruggeri, E. Sakellariadi & G. Scarpelli</i>	723
Numerical modelling of spatial passive earth pressure in sand <i>M. Achmus, S. Ghassoun & K. Abdel-Rahman</i>	729
Practical numerical modelling for very high reinforced earth walls <i>A. Mar, D.M. Tonks & D.A. Gorman</i>	735
Short term three dimensional back-analysis of the One New Change basement in London <i>R. Fuentes, A. Pillai & M. Devriendt</i>	741

Tunnels and caverns

3D analysis of a micropile umbrella for stabilizing the tunnel face of a NATM tunnel <i>F. Schmidt, C. Sagaseta & H. Konietzky</i>	749
Analysis and design of a two span arch cut & cover structure <i>S. Kumar, T. Suckling, L. Macdonald & H.C. Yeow</i>	755
Analysis of a bolt-reinforced tunnel face using a homogenized model <i>E. Bourgeois & E. Seyedi Hosseininia</i>	761
Class A prediction of the effects induced by the Metro C construction on a preexisting building, in Rome <i>F. Buselli, A. Logarzo, S. Miliziano & A. Zechini</i>	767
Estimated settlements during the Brescia Metrobus tunnel excavation <i>A. Sanzeni, L. Zinelli & F. Colleselli</i>	773
Numerical investigation of the face stability of shallow tunnels in sand <i>A. Kirsch</i>	779
Numerical modeling of a bolt-reinforced tunnel in a fractured ground <i>E. Seyedi Hosseininia, E. Bourgeois & A. Pouya</i>	785
On the effects of modelling gap closure and assumed soil behavior on the FE predictions of ground movements induced by tunneling in soft clay <i>C. Miriano & C. Tamagnini</i>	789
Role of numerical modelling in the current practice of tunnel and cavern design for hydroelectric projects <i>C. Vibert, G. Colombet & O.J. Gastebled</i>	795
Some modeling techniques for deep tunnels in rock with FE-continuum models <i>T. Marcher</i>	801
Stress-strain behaviour of a soft-rock pillar acted upon vertical loads <i>F. Federico, S. Screpanti & G. Rastiello</i>	807
Tunnel face stability with groundwater flow <i>P.M. Ströhle & P.A. Vermeer</i>	813
Viscoplastic models for the analysis of tunnel reinforcement in squeezing rock conditions <i>G. Barla, D. Debernardi & D. Sterpi</i>	819

Ground improvement modelling

3D FEM analysis of soil improving resin injections underneath a mediaeval tower in Italy <i>M. Gabassi, A. Pasquetto, G. Vinco & F. Mansueto</i>	827
---	-----

A numerical study of factors governing the performance of stone columns supporting rigid footings on soft clay <i>M.M. Killeen & B.A. McCabe</i>	833
Calibration and verification of numerical model of ground improved by dynamic replacement <i>S. Kwiecien</i>	839
Identification and quantification of the mechanical response of soil-wall structures in soft ground improvement <i>X. Liu, Y. Zhao, A. Scarpas & A. de Bondt</i>	845
Modelling embankments on floating stone columns <i>D. Kamrat-Pietraszewska & M. Karstunen</i>	851
Numerical investigation of the mechanical behaviour of Vibro Replacement stone columns in soft soils <i>T. Meier, E. Nacke, I. Herle & W. Wehr</i>	857
Numerical modelling of consolidation around stone columns <i>J. Castro & C. Sagaseta</i>	863
Numerical modeling of inertial soil-inclusion interaction <i>X. Zhang, Ph. Gotteland, P. Foray, S. Lambert & A. Hatem</i>	869
Performance of geogrid-encased stone columns as a reinforcement of soft ground <i>M. Elsayy, K. Lesny & W. Richwien</i>	875

Offshore geotechnical engineering

A new elasto-plastic spring element for cyclic loading of piles using the p-y-curve concept <i>O. Hededal & R. Klinkvort</i>	883
Behaviour of cyclic laterally loaded large diameter monopiles in saturated sand <i>H. Ercan Taşan, F. Rackwitz & S.A. Savidis</i>	889
Caisson movement caused by wave slamming—a comparison of ABAQUS and FLAC analyses <i>L. Andersen, H.F. Burcharth, T. Lykke Andersen & A.H. Augustesen</i>	895
Comparison of calculation approaches for monopiles for offshore wind turbines <i>A.H. Augustesen, S.P.H. Sørensen, L.B. Ibsen, L. Andersen, M. Møller & K.T. Brødbæk</i>	901
Effects of diameter on initial stiffness of p-y curves for large-diameter piles in sand <i>S.P.H. Sørensen, L.B. Ibsen & A.H. Augustesen</i>	907
Numerical investigations for the pile foundation of an offshore wind turbine under transient lateral load <i>P. Cuéllar, M. Pastor, P. Mira, J.A. Fernández-Merodo, M. Baeßler & W. Rücker</i>	913
Numerical study of piping limits for installation of large diameter buckets in layered sand <i>L.B. Ibsen & C.L. Thilsted</i>	921
Shallow circular foundations under undrained general combined loading in three-dimensional space <i>B. Bienen</i>	927
Undrained ultimate capacity of suction anchors using an advanced constitutive model <i>S. Panayides & M. Rouainia</i>	933

Numerical methods and Eurocode

Embedded cantilever retaining wall ULS design by FEA in accordance with EN 1997-1 <i>A.S. Lees & S. Perdikou</i>	941
Ultimate Limit State Design to Eurocode 7 using numerical methods <i>C.C. Smith & M. Gilbert</i>	947
Author index	953
