Preface	xiii
---------------	------

PART 1 INTRODUCTION

CHAPTER 1	Basic Concepts and Definitions	1
1.1	Introduction	1
1.1.1	Basic Concepts	2
1.2	Units and Dimensions	6
1.2.1	Fundamental Dimensions and Units	7
1.2.2	Fractions and Multiples	8
1.2.3	Units of Other Physical Quantities	8
1.2.4	Imperial Units	10
1.3	Relevant Properties	11
1.3.1	Forms of Matter	11
1.3.2	Fluids	11
1.3.3	Pressure	12
1.3.4	Temperature	15
1.3.5	Density	15
1.3.6	Viscosity	16
1.3.7	Speed of Sound and Bulk Elasticity	17
1.3.8	Thermodynamic Properties	18
1.4	Aeronautical Definitions	24
1.4.1	Airfoil Geometry	24
1.4.2	Wing Geometry	26
1.5	Dimensional Analysis	28
1.5.1	Fundamental Principles	28
1.5.2	Dimensional Analysis Applied to Aerodynamic Force	31
1.6	Basic Aerodynamics	36
1.6.1	Aerodynamic Force and Moment	36
1.6.2	Force and Moment Coefficients	39
1.6.3	Pressure Distribution on an Airfoil	40
1.6.4	Pitching Moment	41
1.6.5	Types of Drag	46
1.6.6	Estimation of Lift, Drag, and Pitching Moment Coefficients from the Pressure Distribution	50
1.6.7	Induced Drag	54
1.6.8	Lift-Dependent Drag	56
1.6.9	Airfoil Characteristics	56
1.7	Basic Flight Stability	63

1.8	Control-Volume Analysis	66
1.8.1	Froude's Momentum Theory of Propulsion	66
1.8.2	Momentum Theory Applied to the Helicopter Rotor ...	70
1.9	Hydrostatics	73
1.10	Exercises	78

PART 2 FUNDAMENTALS OF FLUID MECHANICS

CHAPTER 2	Equations of Motion	87
2.1	Introduction	87
2.1.1	Selection of Reference Frame	88
2.1.2	A Comparison of Steady and Unsteady Flow	89
2.2	One-Dimensional Flow: The Basic Equations	91
2.2.1	One-Dimensional Flow: The Basic Equations of Conservation	91
2.2.2	Comments on the Momentum and Energy Equations ..	98
2.3	Viscous Boundary Layers	98
2.4	Measurement of Air Speed	100
2.4.1	Pitôt-Static Tube	100
2.4.2	Pressure Coefficient	102
2.4.3	Air-Speed Indicator: Indicated and Equivalent Air Speeds	102
2.4.4	Incompressibility Assumption	104
2.5	Two-Dimensional Flow	106
2.5.1	Component Velocities	107
2.5.2	Equation of Continuity or Conservation of Mass	110
2.5.3	Equation of Continuity in Polar Coordinates	112
2.6	Stream Function and Streamline	113
2.6.1	Stream Function ψ	113
2.6.2	Streamline	115
2.6.3	Velocity Components in Terms of ψ	116
2.7	Momentum Equation	119
2.7.1	Euler Equations	124
2.8	Rates of Strain, Rotational Flow, and Vorticity	124
2.8.1	Distortion of Fluid Element in Flow Field	125
2.8.2	Rate of Shear Strain	126
2.8.3	Rate of Direct Strain	127
2.8.4	Vorticity	127
2.8.5	Vorticity in Polar Coordinates	128
2.8.6	Rotational and Irrotational Flow	128
2.8.7	Circulation	128
2.9	Navier-Stokes Equations	131
2.9.1	Relationship between Rates of Strain and Viscous Stresses	132

2.9.2	Derivation of the Navier-Stokes Equations	133
2.10	Properties of the Navier-Stokes Equations	134
2.11	Exact Solutions of the Navier-Stokes Equations	138
2.11.1	Couette Flow: Simple Shear Flow	138
2.11.2	Plane Poiseuille Flow: Pressure-Driven Channel Flow	139
2.11.3	Hiemenz Flow: Two-Dimensional Stagnation-Point Flow	140
2.12	Exercises	145
CHAPTER 3	Viscous Flow and Boundary Layers	151
3.1	Introduction	151
3.2	Boundary-Layer Theory	157
3.2.1	Blasius's Solution	157
3.2.2	Definitions of Boundary-Layer Thickness	159
3.2.3	Skin-Friction Drag	163
3.2.4	Laminar Boundary-Layer Thickness along a Flat Plate	166
3.2.5	Solving the General Case	168
3.3	Boundary-Layer Separation	170
3.3.1	Separation Bubbles	171
3.4	Flow Past Cylinders and Spheres	173
3.4.1	Turbulence on Spheres	180
3.4.2	Golf Balls	180
3.4.3	Cricket Balls	181
3.5	The Momentum-Integral Equation	182
3.5.1	An Approximate Velocity Profile for the Laminar Boundary Layer	186
3.6	Approximate Methods for a Boundary Layer on a Flat Plate with Zero Pressure Gradient	190
3.6.1	Simplified Form of the Momentum-Integral Equation	190
3.6.2	Rate of Growth of a Laminar Boundary Layer on a Flat Plate	191
3.6.3	Drag Coefficient for a Flat Plate of Streamwise Length L with a Wholly Laminar Boundary Layer	191
3.6.4	Turbulent Velocity Profile	192
3.6.5	Rate of Growth of a Turbulent Boundary Layer on a Flat Plate	194
3.6.6	Drag Coefficient for a Flat Plate with a Wholly Turbulent Boundary Layer	198
3.6.7	Conditions at Transition	199
3.6.8	Mixed Boundary-Layer Flow on a Flat Plate with Zero Pressure Gradient	200
3.7	Additional Examples of the Momentum-Integral Equation	205
3.8	Laminar-Turbulent Transition	208
3.9	The Physics of Turbulent Boundary Layers	216

3.9.1	Reynolds Averaging and Turbulent Stress	216
3.9.2	Boundary-Layer Equations for Turbulent Flows	219
3.9.3	Eddy Viscosity	219
3.9.4	Prandtl's Mixing-Length Theory of Turbulence	222
3.9.5	Regimes of Turbulent Wall Flow	224
3.9.6	Formulae for Local Skin-Friction Coefficient and Drag	226
3.9.7	Distribution of Reynolds Stresses and Turbulent Kinetic Energy Across the Boundary Layer	228
3.9.8	Turbulence Structures in the Near-Wall Region	230
3.10	Estimation of Profile Drag from the Velocity Profile in a Wake	234
3.10.1	Momentum-Integral Expression for the Drag of a Two-Dimensional Body	235
3.10.2	Jones's Wake Traverse Method for Determining Profile Drag	236
3.10.3	Growth Rate of a Two-Dimensional Wake Using the General Momentum-Integral Equation	238
3.11	Some Boundary-Layer Effects in Supersonic Flow	240
3.11.1	Near-Normal Shock Interaction with the Laminar Boundary Layer	241
3.11.2	Shock-Wave/Boundary-Layer Interaction in Supersonic Flow	244
3.12	Exercises	249
CHAPTER 4	Compressible Flow	255
4.1	Introduction	256
4.2	Isentropic One-Dimensional Flow	257
4.2.1	Pressure, Density, and Temperature Ratios along a Streamline in Isentropic Flow	261
4.2.2	Ratio of Areas at Different Sections of the Stream Tube in Isentropic Flow	264
4.2.3	Velocity along an Isentropic Stream Tube	267
4.2.4	Variation of Mass Flow with Pressure	268
4.3	One-Dimensional Flow: Weak Waves	279
4.3.1	Speed of Sound (Acoustic Speed)	281
4.4	One-Dimensional Flow: Plane Normal Shock Waves	282
4.4.1	One-Dimensional Properties of Normal Shock Waves	283
4.4.2	Pressure-Density Relations across the Shock	284
4.4.3	Static Pressure Jump across a Normal Shock	285
4.4.4	Density Jump across the Normal Shock	286
4.4.5	Temperature Rise across the Normal Shock	286
4.4.6	Entropy Change across the Normal Shock	287
4.4.7	Mach Number Change across the Normal Shock	288
4.4.8	Velocity Change across the Normal Shock	288
4.4.9	Total Pressure Change across the Normal Shock	289

	4.4.10 Pitôt Tube Equation	292
	4.4.11 Converging-Diverging Nozzle Operations	293
4.5	Mach Waves and Shock Waves in Two-Dimensional Flow ...	296
	4.5.1 Mach Waves	297
	4.5.2 Mach Wave Reflection	305
	4.5.3 Mach Wave Interference	308
	4.5.4 Shock Waves	308
	4.5.5 Plane Oblique Shock Relations	308
	4.5.6 Shock Polar	313
	4.5.7 Two-Dimensional Supersonic Flow Past a Wedge	320
4.6	Exercises	323
4.7	Matlab Functions for Compressible Flow	326

PART 3 AERODYNAMICS OF WINGS AND BODIES

CHAPTER 5	Potential Flow	329
5.1	Introduction	329
	5.1.1 The Velocity Potential	330
	5.1.2 The Equipotential	332
	5.1.3 Velocity Components in Terms of ϕ	333
5.2	Laplace's Equation	334
5.3	Standard Flows in Terms of ψ and ϕ	335
	5.3.1 Two-Dimensional Flow from a Source (or Towards a Sink)	336
	5.3.2 Line (Point) Vortex	338
	5.3.3 Uniform Flow	340
	5.3.4 Solid Boundaries and Image Systems	344
	5.3.5 A Source in a Uniform Horizontal Stream	345
	5.3.6 Source-Sink Pair	349
	5.3.7 A Source set Upstream of an Equal Sink in a Uniform Stream	351
	5.3.8 Doublet	354
	5.3.9 Flow Around a Circular Cylinder Given by a Doublet in a Uniform Horizontal Flow	357
	5.3.10 A Spinning Cylinder in a Uniform Flow	361
	5.3.11 Bernoulli's Equation for Rotational Flow	365
5.4	Axisymmetric Flows (Inviscid and Incompressible Flows) ...	366
	5.4.1 Cylindrical Coordinate System	366
	5.4.2 Spherical Coordinates	367
	5.4.3 Axisymmetric Flow from a Point Source (or Towards a Point Sink)	368
	5.4.4 Point Source and Sink in a Uniform Axisymmetric Flow	369

5.4.5	The Point Doublet and the Potential Flow Around a Sphere	371
5.4.6	Flow Around Slender Bodies	374
5.5	Computational (Panel) Methods	377
5.6	A Computational Routine in Fortran 77	382
5.7	Exercises	386
CHAPTER 6	Thin Airfoil Theory	391
6.1	Introduction	391
6.1.1	The Kutta Condition	393
6.1.2	Circulation and Vorticity	395
6.1.3	Circulation and Lift (The Kutta–Zhukovsky Theorem) ..	400
6.2	The Development of Airfoil Theory	403
6.3	General Thin-Airfoil Theory	405
6.4	Solution to the General Equation	410
6.4.1	Thin Symmetrical Flat-Plate Airfoil	411
6.4.2	General Thin-Airfoil Section	413
6.5	The Flapped Airfoil	417
6.5.1	Hinge Moment Coefficient	419
6.6	The Jet Flap	421
6.7	Normal Force and Pitching Moment Derivatives Due to Pitching	422
6.7.1	$(Z_q)(M_q)$ Wing Contributions	422
6.8	Particular Camber Lines	426
6.8.1	Cubic Camber Lines	426
6.8.2	NACA Four-Digit Wing Sections	429
6.9	The Thickness Problem for Thin-Airfoil Theory	432
6.9.1	Thickness Problem for Thin Airfoils	433
6.10	Computational (Panel) Methods for Two-Dimensional Lifting Flows	436
6.11	Exercises	445
CHAPTER 7	Wing Theory	449
7.1	The Vortex System	450
7.1.1	Starting Vortex	450
7.1.2	Trailing Vortex System	451
7.1.3	Bound Vortex System	452
7.1.4	Horseshoe Vortex	453
7.2	Laws of Vortex Motion	454
7.2.1	Helmholtz's Theorems	455
7.2.2	The Biot-Savart Law	455
7.2.3	Variation of Velocity in Vortex Flow	459
7.3	The Wing as a Simplified Horseshoe Vortex	461
7.3.1	Influence of Downwash on the Tailplane	464
7.3.2	Ground Effects	465

7.4	Vortex Sheets	467
7.4.1	Use of Vortex Sheets to Model the Lifting Effects of a Wing	469
7.5	Relationship between Spanwise Loading and Trailing Vorticity	473
7.5.1	Induced Velocity (Downwash)	475
7.5.2	The Consequences of Downwash—Trailing Vortex Drag	478
7.5.3	Characteristics of Simple Symmetric Loading—Elliptic Distribution	481
7.5.4	General (Series) Distribution of Lift	485
7.5.5	Aerodynamic Characteristics for Symmetrical General Loading	487
7.6	Determination of Load Distribution on a Given Wing	493
7.6.1	General Theory for Wings of High Aspect Ratio	494
7.6.2	General Solution to Prandtl's Integral Equation	496
7.6.3	Load Distribution for Minimum Drag	500
7.7	Swept and Delta Wings	502
7.7.1	Yawed Wings of Infinite Span	503
7.7.2	Swept Wings of Finite Span	504
7.7.3	Wings of Small Aspect Ratio	507
7.8	Computational (Panel) Methods for Wings	513
7.9	Exercises	518
CHAPTER 8	Airfoils and Wings in Compressible Flow	525
8.1	Wings in Compressible Flow	525
8.1.1	Transonic Flow: The Critical Mach Number	525
8.1.2	Subcritical Flow: The Small-Perturbation Theory (Prandtl-Glauert Rule)	529
8.1.3	Supersonic Linearized Theory (Ackeret's Rule)	543
8.1.4	Other Aspects of Supersonic Wings	567
8.2	Exercises	572

PART 4 APPLICATIONS OF AERODYNAMICS

CHAPTER 9	Computational Fluid Dynamics	575
9.1	Computational Methods	575
9.1.1	Methods Based on the Momentum-Integral Equation ..	575
9.1.2	Transition Prediction	579
9.1.3	Computational Solution for the Laminar Boundary-Layer Equations	580
9.1.4	Computational Solution for Turbulent Boundary Layers	584
9.1.5	Zero-Equation Methods	585
9.1.6	$k - \varepsilon$: A Typical Two-Equation Method	586
9.1.7	Large-Eddy Simulation	588

CHAPTER 10	Flow Control and Wing Design	591
10.1	Introduction	591
10.2	Maximizing Lift for Single-Element Airfoils	592
10.3	Multi-Element Airfoils	598
10.3.1	The Slat Effect	602
10.3.2	The Flap Effect	602
10.3.3	Off-the-Surface Recovery	603
10.3.4	Fresh Boundary-Layer Effect	605
10.3.5	The Gurney Flap	605
10.3.6	Movable Flaps: Artificial Bird Feathers	611
10.4	Boundary Layer Control Prevention to Separation	612
10.4.1	Boundary-Layer Suction	612
10.4.2	Control by Tangential Blowing	615
10.4.3	Other Methods of Separation Control	620
10.5	Reduction of Skin-Friction Drag	622
10.5.1	Laminar Flow Control by Boundary-Layer Suction	622
10.5.2	Compliant Walls: Artificial Dolphin Skins	624
10.5.3	Riblets	626
10.6	Reduction of Form Drag	631
10.7	Reduction of Induced Drag	631
10.8	Reduction of Wave Drag	634
Appendix A: Symbols and Notation		635
Appendix B: The International Standard Atmosphere		641
Appendix C: A Solution of Integrals of the Type of Glauert's Integral		647
Appendix D: Conversion of Imperial Units to Système International (SI) Units		651
Bibliography		653
Index		661
