

Table of Contents

Introduction to the Second Edition 1

 Composite Kits 1

 Using a Proven Plans-built Design 2

 Adaptation to New Designs 2

Author's Note - Second Edition 3

 Acknowledgments 3

 The Author 4

Chapter 1

Strong Materials 5

 Basic Materials Principles 5

 Why This Chapter is Important 5

 Intuition About Strong Materials 5

 Action and Reaction 6

 Forces in a Solid 7

 Stress and Strain 8

 Example: Stress in a Practical Bolt 8

 Strain 8

 Hooke's Law 9

 Stiffness - "E" 9

 Strength 11

Understanding Aircraft Composite Construction

Strength and Structure 12

Concrete and Wood As Structures 12

Theoretical Strength 13

Griffith’s Model Material: Glass Fibers 14

Why Things Break 14

Fracture Mechanisms 15

Whiskers - a Curiosity 16

Toughness - or Resistance to Brittle Fracture 17

Work of Fracture 17

Strain Energy and Surface Energy 18

Chapter 2

Forces in Structures 21

Beams, Panels, and Plates 21

 A Simple Case: The Cantilever Beam 21

 The Cantilever Panel 24

 The Basic Panel 25

 Extending the Panel to Make a Beam 26

 Multiple Loads 28

 Beam Bending 29

Shear 30

 Carrying Loads Across a Beam 30

 Shear Force in Practical Beams 31

 A Side Issue: Shear as Twisting a Basket 32

Buckling of Columns	33
Buckling Determined by Shape	33

Chapter 3

The Nature of Composite Materials 35

An Introductory Puzzle	35
---	-----------

Two-phase Materials	36
--------------------------------------	-----------

Two-Phase Material Combinations	37
---	----

How Two-Phase Composites Work	38
---	----

Crack Stopping and Toughness	41
--	----

Compression Loads	41
------------------------------------	-----------

Ductility and Yielding - Failure of a Structure	42
---	----

“Soft” Failure - Metals and Composites	43
---	-----------

Fatigue Failure	44
---------------------------	----

Fatigue in Metals	45
-----------------------------	----

Fatigue Testing	46
---------------------------	----

Fatigue in Composite Structures	47
---	----

Environmental Effects	48
--	-----------

Composites in the Boat Industry	48
---	----

Environmental Degradation Mechanisms	49
--	----

Pure Fibers in Water	49
--------------------------------	----

Composites and Water	50
--------------------------------	----

Wicking	51
-------------------	----

Composites and Corrosive Chemicals	52
--	----

Radiation	53
---------------------	----

Chapter 4

Theory of the Structural Sandwich. 55

From the 2-D Beam to the 3-D Core Panel 55

 Reviewing Simple Beam Theory 55

 Stresses in a three-dimensional Structure 55

 The Structural Sandwich 59

 Bending 59

Failure Modes in Beams and Sandwiches 60

 Core Failure 61

 Tension Failure 61

 Compression Failure - Buckling 62

 Core Shearing Failure 62

 Stiffness in Practical Sandwich Structures 63

 Curved Sandwich Sections 64

Complex Loads 67

 Air Loads On A Wing 67

 “Handling” Loads 68

Chapter 5

Structural Fibers and Matrices 69

Fiber Choices and Fiber Bonding in Composite Structures . . 69

Glass Fiber 69

Carbon Fiber 71

Kevlar™ 71

Table of Contents

Ceramics	72
Hybrids	72
Bonding to the Matrix	73
Fabrics	74
Tow	74
Unidirectional "Fabrics"	75
Weaves - Bi-directional Cloth	75
Other Weaves	76
Knitted Fibers - Triax and Double Bias	76
Mat	78
Adding Resin to the Fiber	79
Pre-impregnated Fabrics - "Prepregs"	79
Other Methods	80
Resin-transfer Molding - RTM	80
Thermoplastics	81
Types of Resins	81
Post-curing - The Glassy State	82
Two-part Resins	84
Measuring Two-part Resins	84
Burt Rutan's VariEze - Some History	85
The RAE Epoxy System	85
The Epolite (Safe-T-Poxy) Family	86
Aeropoxy	87
Poly Epoxy	87
West System Epoxy	88

Understanding Aircraft Composite Construction

“Inhibited” Resins 88

 Polyester Resins 89

 Vinyl Esters 90

Conclusion 91

Chapter 6

Core Materials 93

Introduction 93

 Wood 93

Foam Core Materials 94

 Polystyrene Foam 94

 Polyurethane Foam 95

 Urethane/polyester Foam 96

 Polyvinyl Chloride (PVC) Foam 96

 “Rohacell” 96

Honeycomb Cores 97

Chapter 7

Joining Structures 99

Adhesive Joints 99

 Basic Requirements of an Adhesive 99

 Joining Wood 100

 Joining Formed Composite Structures 101

Bushings and Attachments 104

Bonding Continuing Layups 106

The Secondary Bond 106

Chapter 8

Solid Core Structures 107

Flat Sandwich Structures 107

Burt Rutan's Composite Sandwich 107

The Solid Core Airfoil 108

The Embedded Spar 110

Chapter 9

Basic Moldless Tools

and Techniques 113

Rutan's Original Construction Manual 113

The Bench 114

Auxiliary Tables 115

Small Tools and Supplies 115

Mixing Resin 116

Cutting Fiber and Foam 116

Manipulating Wet Resin 116

Sanding 117

Protection 117

Cleanup 118

Storing, Handling, and Cutting Fiberglass 118

Cutting Fibers 119

Peel Ply: Bond Preparation 119

Understanding Aircraft Composite Construction

Storing and Measuring Base Resin 121

Non-structural Fillers 122

 “Micro” - The Foam Interface 122

Structural Fillers 124

 Flox 124

 Milled Glass 124

 Sawdust 125

Joining Foam Blocks 125

“Prepreg” Strips 125

Hot Wire Foam Cutting 127

 Hot Wire Saw 127

 Basic Cutting Technique 128

 Hot Wire Slicing and Squaring Tool 129

Structural Corners 129

 Inside Corners 129

 Flox Corners 131

Repairs 132

The Knife Trim 132

Finishing - The Basic Problems 132

 Bob Miller’s Filling Method 133

 The Fog Coat: A Warning Layer 135

 Rex Taylor’s Really Dry Micro 135

 The Smudge Stick 136

Chapter 10

Basic Moldless Core

Wet Layup Techniques 137

Building a Foam Core Wing 137

 Templates 137

 Cutting Procedure 140

Basic Moldless Solid-core Layup 140

 Preparation and Minor Repair 141

 Setup for Lower Skin 141

 Masking the Wing Core for the Top Layup 142

 Filling Foam Core Surfaces 143

 Laying Up the Spar Cap Notch 144

Laying Up the Bottom Wing Skin 145

 The Knife Trim 147

 Filling the Trailing Edge 147

 Curing Between Layups 147

Laying Up the Top Skin 148

Finishing 149

Chapter 11

Hollow Structures 151

Alternatives to Solid Cores 151

 Self-supporting Curved Surfaces 151

 The Locally-stiffened Sheet 153

The Hollow Wing 155

Understanding Aircraft Composite Construction

Molded-skin Structures 156

 Sandwich Skin Wings 156

 Locally-stiffened Skin Techniques 157

 Compression Forces in the Skins 159

A Comparative Design Study 160

Extreme Limits - Human-powered Airplanes 160

Molt Taylor’s “Paper” Airplanes 161

Hybrid Designs - The Role of Tooling 163

The Flutter Problem 165

 Flutter Prevention Methods - How Flexible? 166

 Flexure In Composite Designs 167

Chapter 12

Making Molds 169

Introduction 169

The Sheet Mold 170

 Flat Tools - Reference Marks 170

 Joggles 171

Forming a Plug 172

 The Plaster-Surface Plug 172

 The Foam and Micro-surface Plug 173

 Finishing the Plug 173

 Large Plugs 174

Molding Directly on a Male Form	175
Making a Separation Line On the Plug	176
Making the Partition Flange	177
Making a Female Mold	178
Laying Up the Female Mold	178
The Fast, Cheap, Mold	180
Industry Method (Permanent Tooling)	181
Preparing the Female Mold	181

Chapter 13

Using Molds and Vacuum 183

Introduction	183
Making an Open Layup in a Female Mold	184
Vacuum Bagging - Introduction	185
Basic Vacuum Bagging Process	186
The Tool	186
The Vacuum Chamber	187
The Air Path - the Bleeder Ply	188
Sealing the Bag	189
The Laminate	190
Peel Ply	190
Release Sheet	191
Perforated Release Sheet	191

Understanding Aircraft Composite Construction

Mold Release 192

The Vacuum System 193

 Vacuum Pump Alternatives 194

The Caul Plate 194

Example 1: Leading Edge Mold 195

Example 2: Curved Sheet Mold 196

Chapter 14

Conclusion 197

 Materials 197

 Fabrication 197

 Piece Count 198

 Structures 198

 Organization 198

 Replication - Use of Molds 198

The Kit Manufacturers 199

Potential for Original Designers 199

A Speculation 200

References 203

 General Theory of Materials and Structures 203

 Theory of Composites 203

 Mechanics of Failure 204

 Composite Techniques 204
