Preface — V

List of contributing authors — XIII

Filip Ciesielczyk

1	Inorganic acids – technology background and future perspectives — 1
1.1	Introduction — 1
1.2	Sulfuric acid — 4
1.3	Nitric acid — 14
1.4	Phosphoric acid — 24
1.5	Summary — 29
	References — 29

F. J. Alguacil and J. I. Robla

2	Innovative processes in the production of inorganic bases and derived salts of current interest — 33
2.1	Introduction — 33
2.2	Ammonia [1, 1–10] — 34
2.2.1	Conventional steam reforming — 35
2.2.2	Partial oxidation of heavy oils — 40
2.2.3	Modern conventional flow-sheets — 41
2.2.4	The future — 49
2.3	Sodium hydroxide [11–14] — 49
2.3.1	Membrane cell process (the most widely used) — 50
2.3.2	Diaphragm cell process — 51
2.3.3	Mercury cell process — 51
2.4	Potassium hydroxide — 53
2.5	Salts [15–24] — 53
2.5.1	Ammonium nitrate (AN) and calcium ammonium nitrate (CAN) — 53
2.5.2	Sodium carbonate — 59
2.5.3	Potassium carbonate — 59
2.5.4	Lithium carbonate — 60
	References — 63

Magdalena Regel-Rosocka

3	Technology of simple hydrocarbon intermediates — 65
3.1	Introduction — 65
3.2	Steam cracking — 66
3.3	Methanol-to-olefins (MTO) process — 71

3.4	Dehydrogenation of alkanes —	76
3.4.1	Catofin and Catadiene (Houdry) processes —	81
3.5	Oleflex process —	84
3.5.1	Other dehydrogenation processes —	86
3.6	Metathesis of olefins to propylene —	90
3.7	Summary —	92
	References —	93

Martyna Rzelewska-Piekut and Magdalena Regel-Rosocka

4 Technology of large volume alcohols, carboxylic acids and esters — 101

4.1	Introduction —	101
4.2	Technology of large volume alcohols —	102
4.2.1	Methanol —	102
4.2.2	Ethanol —	113
4.2.3	Production of bioethanol —	116
4.3	Technology of large volume carboxylic acids —	127
4.3.1	Acetic acid —	127
4.3.2	Lactic acid —	132
4.4	Technology of large volume esters —	135
4.4.1	Fatty acid methyl esters – biodiesel —	135
4.5	Summary —	139
	References —	139

Katarzyna Materna

5 Trends in technology of oxygen containing hydrocarbons: aldehydes, ketones, ethers — 147

5.1	Introduction —	147
5.2	Aldehydes and ketones —	148
5.2.1	Nomenclature —	148
5.2.2	Properties and application —	149
5.2.3	Preparation —	150
5.2.4	The most important aldehydes and ketones —	151
5.3	Ethers —	153
5.3.1	MTBE production methods —	155
5.4	Green modifications for the oxidation of alcohols into carbonyl-containing products —	156
5.4.1	Oxydation without solvent —	156
5.4.2	Catalytic systems —	157
5.4.3	Oxidations using sodium hypochlorite (bleach) —	159
5.5	Conclusions —	159
	References —	160

Karolina Wieszczycka

6	Novel technologies of nitrogen-based compounds — 163
6.1	Amines — 163
6.1.1	Amination of alcohols — 164
6.1.2	Halogenated hydrocarbon ammonolysis — 169
6.1.3	Olefin amination — 171
6.1.4	Reductive aldehyde and ketone amination — 172
6.1.5	Hydrogenation of unsaturated amine — 177
6.1.6	Aromatic amines – hydrogenation of nitro-compounds — 179
6.1.7	Amination of olefin oxides — 181
6.2	Nitro-compounds — 183
6.3	Isocyanates — 185
	References — 186

Katarzyna Staszak

7	Halogenated hydrocarbons – current trends — 193
7.1	Introduction — 193
7.2	Alkyl halides — 195
7.2.1	Chloromethanes — 195
7.2.2	Chloroalkanes with longer alkyl chain — 206
7.3	Vinyl halides — 207
7.3.1	Chloroethene — 207
7.4	Aryl halides — 213
7.4.1	Chlorinated benzenes — 214
7.4.2	Oxidative chlorination of benzene — 215
7.5	Acyl halides — 216
7.5.1	Epichlorohydrin — 216
	References — 219

Daria Wieczorek and Dobra Kwaśniewska

8	Novel trends in technology of surfactants — 223
8.1	Anionic surfactants — 224
8.1.1	Soap — 224
8.1.2	Linear alkylbenzene sulfonates (LAS) — 226
8.1.3	Methyl ester sulfonate — 226
8.1.4	Alcohol sulfates — 228
8.1.5	Alcohol ethoxysulfates — 230
8.1.6	Sulfosuccinates — 231
8.2	Amphoteric surfactants — 231
8.3	Cationic surfactants — 234
8.3.1	Alkanolamine esters (esterquats) — 234
8.3.2	Cationic surfactants based on alkylamines — 234

- 8.4 Nonionic surfactants — 236
- 8.4.1 Polyoxyethylene surfactants — 236
- 8.4.2 Alkyl phenol ethoxylates — 240
- 8.4.3 Fatty acid ethoxylates — 240
- 8.4.4 Sorbitan esters/ethoxysorbitan esters — 241
- 8.4.5 Alkanolamides — 243
- 8.4.6 Amine ethoxylates — 243
- 8.4.7 Blockpolymer surfactants — 244
- 8.4.8 Alkyl glucoside — 244
- 8.5 Biosurfactants — 247
- References — 249

Maciej Staszak

- 9 Process simulation approach in computer aided industrial design — 251**
 - 9.1 Introduction — 251
 - 9.2 Physical and chemical properties — 253
 - 9.3 Creating the flowsheet and streams definition — 255
 - 9.3.1 Flash calculations — 257
 - 9.3.2 Dealing with flash numerical problems — 258
 - 9.4 Chemical reaction — 259
 - 9.4.1 Thermal modes — 260
 - 9.4.2 Chemical conversion approach — 261
 - 9.4.3 Equilibrium approach — 261
 - 9.4.4 Thermodynamic approach — 263
 - 9.4.5 Kinetic approach — 264
 - 9.5 Separation by distillation — 272
 - 9.5.1 General column setup — 272
 - 9.5.2 Process parameters — 273
 - 9.5.3 Notes — 274
 - 9.6 Heat exchangers — 276
 - 9.6.1 Given process and utility streams, one thermal degree of freedom case — 277
 - 9.6.2 Given one inlet stream and other to be calculated, two thermal degrees of freedom — 277
 - 9.6.3 Given heat transfer coefficient and area of exchange, no thermal degree of freedom — 278
 - 9.6.4 Given heat duty, no thermal degree of freedom — 278
 - References — 279

Xavier Montané, Josep M. Montornes, Adrianna Nogalska, Magdalena Olkiewicz, Marta Giamberini, Ricard Garcia-Valls, Marina Badia-Fabregat, Irene Jubany and Bartosz Tylkowski

10 Synthesis and synthetic mechanism of Polylactic acid — 281

- 10.1 Introduction — **281**
- 10.2 Polylactic acid — **282**
- 10.3 The synthesis of PLA — **285**
 - 10.3.1 Polycondensation of Lactic acid — **285**
 - 10.3.2 Ring-opening polymerization (ROP) of Lactide — **286**
 - 10.3.3 Azeotropic distillation of Lactic acid — **287**
- 10.4 Catalysts — **287**
 - 10.4.1 Organometallic catalysts — **288**
 - 10.4.2 Cationic catalysts — **290**
 - 10.4.3 Organic catalysts — **291**
 - 10.4.4 Bifunctional catalysts — **291**
 - 10.4.5 Stereoselective Lactide polymerization — **293**
- 10.5 Conclusions — **294**
 - References — **294**

Index — 297
