

List of contents

List of the most important abbreviations and denotations	4
Preface	7
Introduction	9
1. Hydraulic precise pairs as tribological systems.....	11
2. Classifications and definitions of abrasive wear	19
3. Models and parameters of abrasive wearing evaluation.....	29
3.1. Critical analysis of the existing models and parameters in evaluation of abrasive wearing.....	29
3.1.1. First models describing abrasive wear out	29
3.1.2. Fixed grains and their shape.....	31
3.1.3. Role of abradant hardness in wearing of metal	38
3.1.4. Role of composition and structure of abrasively worn material.....	39
3.1.5. Abrasive wearing in a presence of a lubricating liquid	41
3.1.6. A role of outer constrains	47
3.1.7. Specificity of wearing with loose grains	60
3.2. Summary.....	61
4. Methodical evaluation of abrasive wearing of hydraulic precise pairs	63
4.1. Process of analysis of abrasive wearing based on identification studies	63
4.2. Comparative evaluation of a dynamic and static state relations	79
4.3. Summary.....	83
5. New models of hydraulic precise pairs abrasive wearing	87
5.1. Model of a surface and top layer abrasively worn.....	87
5.2. Model of abrasive grain	91
5.3. Hydraulic liquid in tribological system	94
5.4. Resistance of abrasive grain in the tribological system's liquid.....	98
5.5. Shearing erosion in a hydraulic tribological system	101
5.6. Elementary model of abrasive wear out of hydraulic precise pairs	108
5.7. The use of models of abrasive wearing hydraulic precise pairs	117
6. Postscript	137
