Before You Start 1

Notes on hands-on exercises and functionality of Simulation
Prerequisites
Selected terminology

1: Introduction 5

Heat transfer by conduction
Heat transfer by convection
Heat transfer by radiation
Thermal boundary conditions
Analogies between thermal and structural analysis
Thermal elements: solids and shells
Scalar and vector entities, presenting results
Steady state thermal analysis
Transient thermal analysis
Linear thermal analysis
Nonlinear thermal analysis

2: Hollow plate 21

Heat transfer by conduction
Heat transfer by convection
Different ways of presenting results of thermal analysis
Convergence analysis in thermal problems
Solid elements in heat transfer problems
Shell elements in heat transfer problems

3: L bracket 33

Heat transfer by conduction
Use of 2D models
Singularities in thermal problems

4: Thermal analysis of a round bar 41

Heat transfer by conduction
Thermal conductivity
Heat transfer by convection
Convection boundary conditions
Thermal resistance
Prescribed temperature boundary conditions
Heat power
Heat flux

5: Floor heating duct – part 1 57

Heat transfer by conduction
Prescribed temperature boundary conditions
Heat power
Heat flux
Heat flux singularities
Analogies between structural and thermal analysis

6: Floor heating duct – part 2 75

Heat transfer by convection
Free and forced convection
Convection coefficient
Ambient (bulk) temperature

7: Hot plate 85

Transient thermal analysis
Conductive heat transfer
Convective heat transfer
Heat power
Thermostat
Thermal inertia

8: Thermal stress analysis of a coffee mug 101

Transient thermal analysis
Thermal stress analysis
Thermal symmetry boundary conditions
Structural symmetry boundary conditions
Use of soft springs

9: Thermal buckling analysis of a link 113
Buckling caused by thermal effects
Interpretation of Buckling Load Factor

10: Thermal analysis of a heat sink 123
Analysis of an assembly
Thermal contact conditions
Steady state thermal analysis
Transient thermal analysis
Thermal resistance layer
Thermal symmetry boundary conditions

11: Radiative power of a black body 139
Heat transfer by radiation
Emissivity
Black body
Radiating heat out to space
Transient thermal analysis
Heat power
Heat energy

12: Radiation of a hemisphere 151
Heat transfer by radiation
Emissivity
Radiating heat out to space
View factors
Heat power

13: Radiation between two bodies 159
Heat transfer by radiation
Emissivity
Radiating heat out to space
View factors
Heat power
Closed system
Open system

14: Heat transfer with internal fluid flow 173
Introduction to Flow Simulation
Using Flow Simulation for finding convection coefficients in internal fluid flow
Interfacing between Flow Simulation and Thermal analysis
Interfacing between Flow Simulation and structural (Static) analysis

15: Heat transfer with external fluid flow 217
Using Flow Simulation for finding convection coefficients in external fluid flow
Interfacing between Flow Simulation and Thermal analysis

16: Radiative Heat Transfer 235
Radiative heat transfer problem analyzed with Thermal Study in Simulation
Radiative heat transfer problem analyzed with Flow Simulation

17: NAFEMS Benchmarks 255
Importance of benchmarks
One dimensional heat transfer with radiation
One dimensional transient heat transfer
Two dimensional heat transfer with convection

18: Summary and miscellaneous topics 273
Summary of exercises in chapters 1-13
Nonlinear transient problems
Advanced options of thermal study
Closing remarks

19: Glossary of terms 291

20: References 293

21: List of exercises 295
