 Chapter 1 The role of DSOs in the development of recharging points for electric vehicles (Wojciech Drożdż, Mateusz Radziński, Anna Mathews)	25
1.1. Introduction	26
1.2. Government documents related to electromobility in Poland	26
1.3. The Act on Electromobility	27
1.3.1. Development of the EV recharging infrastructure in Poland – main objectives	27
1.3.2. The role of the local authorities in the development of recharging infrastructure	28
1.3.3. The DSO obligation to construct recharging infrastructure	29
1.4. Article 33 of the Directive 2019/944	31
1.4.1. Directive 2019/944 – genesis	31
1.4.2. Electromobility and the DSO's role in the Winter Package	32
1.4.3. Directive 2019/944 – general provisions	32
1.4.4. Article 33 of Directive 2019/944 – DSO's ownership of EV recharging points	33
1.4.5. The obligation to connect and cooperate on a non-discriminatory basis ...	33
1.4.6. DSO as an owner, developer, manager and operator of recharging points ..	34
1.5. Conclusions	36
Resumen	38
Bibliography	39
Legislation	41

Chapter 2 Electromobility in selected national economies

(Wojciech Drożdż, Jakub Dowejko)	43
2.1. Introduction	43
2.2. Brief history of electromobility	44
2.3. Examples of national economies with dynamically developing electromobility ...	46
2.4. Poland on course for electromobility	49
2.5. Electromobility within the concept of smart cities	53
2.6. Correlation between the current state of electromobility in selected countries and the <i>Human Development Index</i>	56
2.7. Conclusions	60
Resumen	61
Bibliography	61

Chapter 3 Legal framework for the development of electromobility: the assessment of legislative solutions supporting innovation

(Filip Elżanowski, Maciej Szmigiero)	63
3.1. Introduction	64
3.2. Axiological background for the regulation	65
3.3. Administrative planning	70
3.4. Specific provisions of the support for electromobility	71
3.5. Conclusions	79
Résumé	80
Bibliography	81
Legislation	83

Chapter 4 Knowledge transfer in today's economy to develop e-mobility technologies (Radosław Miśkiewicz)

4.1. Introduction	85
4.2. Research on today's economy and e-mobility	86
4.3. Knowledge transfer within the energy market in terms of e-mobility	88
4.4. Deployment of e-mobility infrastructure in Poland	93
4.5. Conclusions	98
Resumen	99
Bibliography	100

Chapter 5 Bluetooth Low Energy and ad-hoc networks as “last metre” of city information systems (Jarogniew Rykowski, Michał Brzoski)	105
5.1. Introduction	105
5.2. Motivations and technical base of the proposed solution	107
5.3. Two-directional information flow	109
5.4. Proposed system architecture	111
5.5. Advantages of ad-hoc networking at public places	114
5.6. Comparison with similar work	117
5.7. Conclusions	119
Résumé	119
Bibliography	120
 Chapter 6 Cohesion of action in the pursuit of development policy on the example of public investment in the area of electromobility (Katarzyna Kokocińska, Jarosław Kola)	123
6.1. Electromobility development policy and the conditions underlying its implementation	124
6.1.1. Development of low-emission transport as a vital goal of development policy	124
6.1.2. Objectives of the European Green Deal with respect to low-emission transport	125
6.1.3. Key significance of development planning	126
6.2. The legal model of planning for development of electromobility and alternative fuels infrastructure	127
6.2.1. EU context for electromobility development planning	127
6.2.2. Domestic foundations for development policy in the area of electromobility	129
6.2.3. Legal mechanisms governing national development policy	130
6.2.4. Cohesion of actions as a requisite of effective development policy	132
6.3. Public investment in the field of electromobility: the legal background	133
6.3.1. The leading role of public investments	134
6.3.2. Public procurement law as a key effectiveness factor in electromobility development policy	136
6.4. Conclusions	140
Resumen	141
Bibliography	142

Chapter 7 The role of electric vehicles in the future low-carbon energy system

(Oliwia Mróz-Malik, Marcin Kopiczko)	143
7.1. Challenges of the EU energy policy	143
7.2. EU policy for sustainable mobility	145
7.3. Challenges for the power sector in the face of 2020 COVID-19 pandemic	147
7.4. Vehicle-to-everything?	149
7.5. Services to the grid and integrating renewables	150
7.6. The role of smart charging in grid balancing	152
7.7. Conclusions	155
Resumen	156
Bibliography	156
