

Table of Contents

Introduction	9
Chapter 1. Electromobility as the Future of Modern Cities (K. H. Bachanek)	21
1.1. Introduction	22
1.2. History of Electromobility Development	23
1.3. Electromobility and Its Place in Modern Cities	27
1.3.1. The Smart City Concept within the E-mobility Area	27
1.3.2. Analysis of the Current State of Infrastructure and Market of Electric Vehicles and Prospects for Their Development	33
1.4. Conclusions	36
References	36
Chapter 2. Electromobility in Waterway Transport as an Alternative to Urban Transport and Road Transport in the Largest Polish Cities (W. Drożdż, A. Pomianowski)	39
2.1. Introduction	40
2.2. Transport Function of Rivers	40
2.3. Transport in Urban Areas and Agglomerations	42
2.4. The Possibility of Using Rivers for Transport in Polish Cities	44
2.5. The Development of City Waterway Transport Based on Low-Emission Means of Transport	48
2.6. Conclusions	51
References	52
Chapter 3. Electromobility in Cities (R. Miśkiewicz, J. Szoltysek, K. Wodarski)	55
3.1. Introduction	56
3.2. Review of the Scientific Output Related to Smart Cities and Electromobility	57

3.3. Development of Electromobility in Poland	60
3.4. Development of Electromobility by ENEA Operator	63
References	67

Chapter 4. Multiple Uses of Big Data for Improved Knowledge on Energy

Consumers: The Case of Portugal (P. Palma, J.P. Gouveia)	73
---	----

4.1. Introduction	74
4.2. Energy Sector of Portugal	77
4.2.1. Big Data Sources and Collection	78
4.2.2. Examples of Data Application for Improved Knowledge	80
4.3. Conclusions and Reflections	90
References	92

Chapter 5. Electric City Bike – Opportunities, Challenges and Threats

(E. Puzio)	99
------------------	----

5.1. Introduction	100
5.2. City Bike – Characteristics	100
5.3. Development and Operation of City Bikes	103
5.4. Opportunities, Challenges and Risks Associated with the Deployment of Electric City Bikes	107
5.4.1. Opportunities	107
5.4.2. Challenges	109
5.4.3. Threats	109
5.5. Conclusions	110
References	111
