

TABLE OF CONTENTS

1. Introduction	9
2. Safety in transport	17
2.1 Safety performance regarding different transport modes	17
2.1.1 Prologue	17
2.1.2 Safety performance regarding different transport modes.	19
2.2 Railway safety performance in Poland for 2018	22
2.2.1 Summary	32
2.3 Common Occurrence Reporting concept (COR)	32
2.3.1 Subject matter	33
2.3.2 Scope	34
2.3.3 Definitions	39
2.3.4 Reporting scheme and timing	46
2.3.5 Data collection, storage and analysis	48
2.3.6 Proposed next steps	51
2.3.7 Summary	51
2.4 Analysis of the state of knowledge	52
3. Intergrated SAFETY management system in the railway transport	57
3.1 General characteristics of the railway transport	57
3.2 Actors subject to risk assessment in rail	58
3.2.1 Carrier and the infrastructure manager	58
3.2.2 User of siding	59
3.2.2.1 Acquisition of a railway siding railway safety certificate [41]	61
3.2.2.2 The origins of taking safety certificate siding	61
3.2.2.3 Advantages and disadvantages of taking the siding safety certificate	61
3.2.2.4 Legal requirements for SMS with respect to the railway siding	62
3.2.2.5 Summary	65
3.2.3 Railway manufacturer	67

3.2.4 Entity responsible for maintenance (including maintenance workshops) [118], [119]	69
3.3 Integrationan of management systems.....	72
3.3.1 Management Systems in rail.	72
3.3.2 Examples of systems integration management [121]	74
3.4 The institutional and legal system	78
4. Characteristics of system operation maintenance management in rail transport.....	89
4.1 Definition and description of the process approach	89
4.1.1 Identification of the process.....	90
4.1.2 Determination of the links between the processes	91
4.1.3 Term for the processes responsible.....	92
4.2 Development of the system	93
4.3 Process improvement	93
4.4 Process map	94
4.5 Requirements and assumptions Management System maintenance.....	95
4.5.1 Directive 2008/110 / EC as regards requirements MMS.....	100
4.5.2 Memorandum of Understanding (MoU) – temporary solution	101
4.5.3 Regulation EC No. 445/2011 – target solutions	103
4.6 Risk assessment SMS and MMS.....	106
4.6.1 Risk assessment in transport	107
4.6.2 The risk assessment in rail transport.....	112
4.6.3 Commission Regulation (EC) No 402/2013	113
4.7 Diagnostics in rail.....	120
5. Development of a model system maintenance management and methods of analysis parameters RAMS rail vehicles	133
5.1 Introduction to risk assessment management system maintenance.....	133
5.2 Assessment of operational risk according to a common method of risk evaluation and assessment (CSM-RA)	134
5.3 Assessment of operational risk in accordance with the requirements of the Regulation 445/2011	137
5.4 Assessment of operational risk in the proposed MMS.....	139
5.4.1 Description of the method	139
5.4.1.1 Basic rules	139
5.4.1.2 Stages of risk management in MMS.....	140
5.4.2 Mathematical description on the risk management model	143

5.5 Method used for evaluation.....	146
5.6 Identification of critical technical system in railway vehicles.....	148
5.6.1 Introduction	148
5.6.2 Analysis of the causes of the accidents of the original railway.....	149
5.6.2.1 Analysis of the share of railway technical accidents....	151
5.6.2.2 Analysis of the causes of the accidents of the original railway	153
5.6.2.3 Analysis of the share of railway technical accidents....	154
5.7 Maintenance management system model of rail vehicles	155
5.7.1 Map processes made for the needs of the ECM	155
5.7.2 List of procedures MMS	155
5.8 Rams analysis of the parameters of rail vehicles.....	165
6. Validation of the model system maintenance management and analysis of rams parameters of rail vehicles	171
6.1 Applicaion maintenance management system model to the actor in charge of maintenance (ecm) freight wagons	172
6.1.1 Maintenance Management System 2.1.1	172
6.1.2 Operational risk assessment.....	173
6.2 Application developed algorithm to analyse rams in charge of maintenance (ecm) freight wagons	173
6.2.1 Freight wagon type 412W – RAMS indicators	174
6.2.1.1 Type 412W – RAMS – common to the group by year	178
6.2.1.2 Type 412W – RAMS – for individual vehicles (25 worst wagons)	179
6.2.2 Wagon type 412W – RAMS indicator – conclusions	181
6.3. Conclusions from the analysis of the use of multimedia in RAMS....	183
7. Safety culture.....	185
7.1 Preface	185
7.2 Place of safety culture in EU documents	186
7.3 Railways application concept.....	189
8. Summary	195
9. Bibliography	197
