

CONTENTS

Preface	9
Acknowledgement	11
Introduction	13
1. Power Distribution in Hybrid Vehicle Drive	21
1.1. Structure of Hybrid Drives.....	21
1.2. The Power Distribution.....	23
1.3. Energy Balance of the Drive.....	29
2. Electrochemical Accumulator Energetic Modelling Method Enabling Hybrid Drive Systems Design by Simulation Research	35
2.1. Determining Power Properties of Electrochemical Traction Accumulator	35
2.1.1. Accumulator's State of Charge.....	36
2.1.2. Accumulator's Internal Resistance	39
2.1.3. Voltage at Cell's Terminals.....	41
2.1.4. State of Charge for an Accumulator With the load Current Described by a Piecewise Monotonic Function.....	41
2.1.5. Charging the Accumulator.....	43
2.1.6. Electrochemical Accumulator Power Efficiency.....	43
2.1.7. General Model of Electrochemical Accumulators - Traction Batteries	45
2.2. Method of Determination of the Electromotive Force Function Using Experimental Data.....	47
2.2.1. Experimental Data	47
2.2.2. Adaptation of the General Battery Model for Modelling Purpose of Gel Lead Acid Battery.....	50
2.2.3. Exemplary Calculations.....	53
2.2.4. General Representative Mathematical Model of Gel Lead Acid Batteries	65
2.3. Adaptation of the General Battery Model for Modelling Purpose of NiCd and Ni Metal Hydride Batteries.....	70
2.3.1. Model of NiCd Battery	70
2.3.2. NiMH (Nickel Metal Hydride) Battery	79
3. Energetic Properties of Flywheels in Hybrid Drives	85
3.1. The Method of Shape Efficiency Index	86
3.1.1. Exemplary Stress Calculations of Most Often Used Flywheel Shapes	88
3.2. General Assumptions for Flywheel Design	97
3.3. Flywheel Energetic Modelling.....	106
4. Thermal - Internal Combustion Engine - Energetic Modelling	113
4.1. Engine Modelling by Using Experimental Data	113
4.2. I.C. Engine Diesel	118

4.3. General Approach to the Determination of the Area Engine Co-operation in Hybrid Drives	120
5. Electric Traction Motors Modelling	125
5.1. Separately Excited DC Motor Modelling	125
5.2. AC Asynchronous Induction Motor Modelling	130
5.2.1. Differential Equations Based on Phase Quantities	130
5.2.2. Phase Quantities in Terms of Resultant Phasors.....	135
5.2.3. The α - and β - axis Components of Stator Quantities and the d- and q- axis Components of Rotor Quantities	137
5.2.4. The d- and q- axis Components of Stator Quantities and the α - and β - axis Components of Rotor Quantities	139
5.2.5. Flux Linkage Phasors in Terms of Current Phasors.....	140
5.2.6. The Voltage Equation in Terms of α - and β - axis Components ..	142
5.2.7. Voltage Equations in Terms of d- and q- axis Components and in Terms of Components Along Axis Rotating at Arbitrary Velocity .	144
5.2.8. Electromagnetic Torque Expressed in Terms of Resultant Current and Flux Linkage Phasors and Their Component.....	146
5.2.9. Approach to a Power Simulation Model of Driving System with AC Induction Motor	148
5.2.10. Influence of Frequency on Field Weakening	159
5.3. Synchronous PM Motor Model	163
5.3.1. Operating Principles and Construction Evolution	163
5.3.2. Converter Circuits	165
5.3.3. Equivalent Circuit of Synchronous Motor	168
5.3.4. Approach to a Power Simulation Model of Drive System with PM Synchronous Motor	176
5.3.5. Vector Field Oriented Control of PM Synchronous Motor	179
5.3.6. Brushless Permanent Magnet Motor (PM) Field Weakening Modelling	180
6. Mechanical Transmission Units Modelling.....	189
6.1. Planetary Gear Power Modelling.....	189
6.2. Reducer or Multiplicator Gear	191
7. Simulation Study of Exemplary Hybrid Drives.....	193
7.1. General Algorithm for Computer Simulation	193
7.2. Exemplary Computer Tests of Hybrid Drive for DC, AC Induction and PM Synchronous Motors	196
7.2.1. DC Motor - Standard Chopper Drive.....	197
7.2.2. AC Motor	202
7.2.3. PM Synchronous Motor	208
7.3. Two-source Series Drive.....	213
7.4. Series-parallel Hybrid Drives.....	216
7.4.1. Two-source Hybrid Drive Consisting of Battery and Flywheel ..	216
7.4.2. Three-source Drive.....	225

7.5. Advanced More Efficient Compact Hybrid Drive	227
7.6. Hybrid Drive Architecture Equipped with Robotized Gear-box	252
8. Exemplary Analysis of Selected Drive Systems	261
8.1. Adjustment of Flywheel Resistance Factors For Two-source Electric Vehicle Drive	261
8.2. Regenerative Braking For one and Two -source Electric Vehicle Drive .	267
8.3. Analysis of Electric Vehicle City Travelling Range	272
8.4. Approach to Control of Hybrid Drive	281
9. Method of Determination of Discharging Accumulator Factor - Minimum Internal Energy Losses	289
