Abstract	ix
Streszczenie	xi
List of symbols and abbreviations	xiii
1. Introduction	1
1.1. Motivation	1
1.2. State of the art	2
1.2.1. Introduction	2
1.2.2. Anisotropy and non-locality	3
1.2.3. Shear bands	4
1.2.4. Viscoplasticity	6
1.2.5. Fractional calculus	7
1.2.6. Summary	8
1.3. Aims and objectives	8
1.4. Outline	10
1.5. Published work	11
1.5.1. International journals	11
1.5.2. Conference papers and presentations	11
2. Foundations of continuum mechanics and finite element method	13
2.1. Introduction	13
2.2. Kinematics	14
2.3. The concept of stress	19
2.4. Conservation of mass, momenta and energy	21

2.4.1.	Conservation of mass	21
2.4.2.	Conservation of linear momentum	22
2.4.3.	Conservation of angular momentum	23
2.4.4.	Conservation of mechanical energy	23
2.4.5.	First law of thermodynamics	25
2.4.6.	Second law of thermodynamics	25
2.5.	Axioms of material modelling	26
2.6.	Finite element method – explicit scheme	28
2.6.1.	Variational principle	28
2.6.2.	Finite element approximation	30
2.6.3.	Nonlinear transient problem – explicit scheme	32
3.	Fractional stress-gradient thermo-viscoplasticity	35
3.1.	Fractional calculus	35
3.2.	Fractional viscoplastic flow rule	38
3.2.1.	Perzyna's theory of viscoplasticity	38
3.2.2.	Fractional viscoplasticity – basic approach	41
3.2.3.	Implementation – VUMAT subroutine	41
3.3.	Benchmark tests – the cube-shaped volume element under tension load	47
3.3.1.	Study of the influence of the fractional parameters	48
3.3.2.	Study of the material parameters of the viscoplastic models	51
3.3.3.	Study of the dispersive nature of the fractional viscoplastic model	54
3.3.4.	Conclusions	58
4.	Fractional viscoplasticity with extended constitutive structure	59
4.1.	General remarks	59
4.2.	Thermo-mechanical response and damage criterion in the framework of the fractional viscoplasticity	59
4.3.	Implementation – VUMAT subroutine	62
4.4.	Numerical study	63
4.4.1.	Experimental results	63
4.4.2.	Description of numerical tension test	63
4.4.3.	FEM model and material parameters	66
4.5.	Numerical examples	68
4.5.1.	General remarks	68
4.5.2.	State variables evolution	68
4.5.3.	State variables evolution at selected integration points	71
4.5.4.	Fracture criterion based on the evolution of the microdamage	73
4.5.5.	Parametric study	75

4.6. Conclusions 79

5. Conclusion and future work 87

5.1. Introduction 87

5.2. General conclusions 87

5.3. Future work 91

Bibliography 93

Firstly, I would like to express my sincere gratitude to my advisor Prof. Wojciech Sumelka for the continuous support of my Ph.D. study and related research, for his patience, motivation, and immense knowledge. His guidance helped me in all the time of research and writing of this thesis. I could not have imagined having a better advisor and mentor for my Ph.D. study.

Besides my advisor, I would like to thank my co-advisor, Dr Marcin Nowak, for his insightful comments and encouragement, but also for the hard question which incited me to widen my research from various perspectives.

I thank my colleagues from the Division of Computer-Aided Design: Dr Tomasz Gajewski, Dr Krzysztof Szajek, Dr Hasan Al-Rifaie, Dr Tomasz Garbowski, Dr Tomasz Janikowski, Dr Piotr Sielicki and Bartosz Luczak, for the stimulating discussions and their indulgence when I was asking questions that challenged their patience rather than knowledge.

I would like to thank Prof. Tomasz Lodygowski for his support and his interest in my research.

During my Ph.D. studies, I was fortunate enough to attend excellent university courses. I would like to thank Prof. Katarzyna Kowalczyk-Gajewska, Prof. Mieczysław Kuchnia and Prof. Wojciech Sumelka for the lectures that broaden my knowledge and gave me tools to tackle research problems.

I would also like to express my gratitude towards my colleagues and superiors, Ratal Sadowski and Robert Jędrzejczak, for their support and understanding.

I am indebted to the communities behind the multiple open-source software projects, which were instrumental in my work, such as GNU/Linux, GIMP, Inkscape, Blender, Python, IDLE, Sella. I would also like to acknowledge commercial tools that were available to me under research or academic licenses: Abaqus, Intel Fortran Compiler, PyCharm, GitHub. This thesis was created using Overleaf, a cloud-based LaTeX editor.
