

Contents

1. Light pollution and nocturnal mammals – Case study: the Influence of artificial light on insectivorous bats (B.W. Wołoszyn)	9
1.1. Background information about bats	10
1.2. The bats of Poland	11
1.3. Bat hibernation	11
1.4. ALAN and the hibernation period	13
1.5. Bats and artificial light during the summer quarter	13
1.6. Churches as a refuge for bats	13
1.7. Ambivalence regarding the influence of artificial light on insectivorous bats	13
2. Night shift work desynchronises circadian rhythm via epigenetic mechanisms (K. Skwarło-Sońta, K. Zużewicz)	17
2.1. The endogenous clock system in humans	18
2.2. Linking lighting conditions with circadian organisation – the role of the pineal gland	19
2.3. Light pollution: definition, sources, effects	21
2.4. Night shift work and its influence on the circadian system	22
2.5. The involvement of epigenetic mechanisms in the adverse effects of ALAN	26
2.5.1. A brief introduction to epigenetics	26
2.5.2. Epigenetic modifications in the context of ALAN-evoked circadian desynchrony	28
3. The effect of light pollution on plants. A preliminary methodological study on small-leaved lime (M. Dani, K. Baráth, P. Molnár, F. Siska, K. Turbucz, A. Skribanek)	33
3.1. Materials and methods	34
3.2. Results and discussion	35
4. Artificial lighting and light pollution from the plant's point of view (A. Kołton, M. Czaja, O. Długosz-Grochowska)	39
4.1. The sensing of light by plants	40
4.2. Artificial lighting in horticulture and plant production	44
4.3. Plants and light pollution	50

4.4. Spring and autumn phenophases	52
4.5. Physiological changes	53
4.6. Flowering and pollinators	54
5. Comparison of two measurement methods – photometric and photographic – in studies of night-sky brightness (D. Karpińska, M. Kunz).....	57
5.1. Light pollution.....	58
5.2. Measurement network	59
5.2.1. Study area.....	59
5.2.2. Assumptions and conditions of the measurements.....	60
5.2.3. Measurement methods.....	62
5.3. Analysis and comparison of the results	64
6. Laboratory for dark sky quality measurements (Z. Kolláth, D. Száz, J. Vanyó, K.P. Tong).....	69
6.1. Calibration of the cameras.....	70
6.2. “Real-colour” images of the night sky.....	71
6.3. The workflow of field measurements.....	72
7. Light pollution at the Botanical Garden of Jagiellonian University – preliminary analysis (T. Ścieżor)	75
7.1. History of the Botanical Garden.....	75
7.2. Apparatus	76
7.3. Measuring point	77
7.3.1. Location and description of the measuring point	77
7.3.2. Light pollution around the measuring point	78
7.4. Analysis of seasonal changes of selected meteorological elements at the BOT measuring point in 2019	79
7.5. Measurements of the brightness of the night sky	82
7.5.1. Night brightness statistics in 2019	82
7.5.1.1. All nights	82
7.5.1.2. Moonless nights.....	84
7.5.1.3. Cloudless and moonless nights	84
7.5.2. The dependence of the brightness of the night sky on the values of selected meteorological elements	84
7.5.2.1. The dependence of the brightness of the night sky on air temperature.....	85
7.5.2.2. The dependence of the brightness of the night sky on the relative humidity of the air	86
7.5.2.3. The dependence of the brightness of the night sky on the level of cloud cover	86

7.5.2.4. Dependence of the night sky brightness on horizontal visibility.....	88
8. Lighting systems in residential developments in the city of Wrocław. The latest lighting and light pollution issues on an urban scale (A. Łopuszyńska, D. Gronkiewicz)	93
8.1. Methodology and scope of the research.....	94
8.2. A look at the balanced illumination in residential areas	95
8.3. Lighting quality criteria: light pollution and housing development.....	97
8.4. Day imitation: current awareness and importance to residential function.....	99
8.5. Lights-out time	102
8.6. Visual comfort.....	103
8.7. Light smog and environmental impact.....	106
9. Protecting the night sky in historical cities (A. Czaplicka, B. Siedlecki)	109
9.1. Legal regulations.....	109
9.2. Phenomena associated with light pollution.....	110
9.3. The impact of light pollution on animate nature and humans	110
9.4. Examples of correct and incorrect illumination of historical cities.....	112
9.5. Toronto city centre	114
9.6. Contemporary technologies and environmental protection.....	116
9.7. "Ground Zero", New York	117
10. Possibilities regarding the implementation of night-time artificial light in environmental planning processes (M. Zschorn)	121
10.1. Possibilities of environmental instruments to influence light pollution	122
11. The Importance of the Bükk and Hortobágy Dark-Sky Parks and their educational benefits (A. Apró, I. Gyarmathy, R. Novák)	125
11.1. Hortobágy National Park.....	125
11.2. Hortobágy as a dark-sky park, public access and outreach	126
11.2.1. Lighting regulations in Hortobágy Dark-Sky Park.....	128
11.3. Bükk National Park	129
11.3.1. Public access and outreach	130
11.3.2. Lighting fixture replacements.....	131
11.4. Awareness of light pollution in educational institutions	132
12. Are dark-sky parks recognisable in society? The example of Izera Dark-Sky Park (G. Iwanicki)	133

12.1. Materials and methods.....	135
12.2. IDSP popularisation activities	135
12.3. Interviews.....	139
13. The tenth anniversary of the Izera Dark-Sky Park (S. Kołomański, E. Niemczura, J. Molenda-Żakowicz)	143
13.1. Izera Dark-Sky Park – basic facts	144
13.2. Astronomical attractions.....	145
13.2.1. Sundial.....	146
13.2.2. Gnomon	146
13.2.3. Planetary trail.....	148
13.3. Activities	149
13.3.1. School Workshops on Astronomy.....	149
13.3.2. Izera Long Exposures.....	150
13.3.3. Astronomical events for the public.....	151
Bibliography.....	155
Streszczenie.....	177
Summary	178
Zusammenfassung.....	179
Резюме	180
