

Contents

Foreword	5
1. Elements of Logic and Mathematical Reasoning	7
1.1. Sentence, Sentential Formula and Tautology	7
1.2. Quantifiers	11
2. Fractions and Algebraic Expressions	14
2.1. Fractions	14
2.2. Percent and Per Mil	17
2.3. Binomial Formulas	20
3. Elementary Functions	25
3.1. The Concept and Basic Properties of Functions	25
3.2. Linear Function	27
3.2.1. Basic Properties of Linear Function	27
3.2.2. Linear Equations and Inequalities	28
3.2.3. Linear Demand-Supply Model	29
3.3. Absolute Value	32
3.4. Quadratic Function	36
3.4.1. Basic Properties of Quadratic Function	36
3.4.2. Solving Quadratic Equations and Inequalities	39
3.4.3. Optimising Cost and Profit from Production	41
3.5. Rational Function	45
3.5.1. Homographic Function	45
3.5.2. How to Solve a Rational Equation	46
3.5.3. How to Solve a Rational Inequality	47
3.5.4. Average Cost of Production	50
3.6. Powers and Exponential Function	53
3.6.1. Power	53
3.6.2. Exponential Function $f(x) = a^x$, where $a > 0$ and $a \neq 1$	54
3.6.3. Exponential Equations	55
3.6.4. Exponential Inequalities	56

3.6.5. Nonlinear Demand-Supply Model	57
3.6.6. Rate of Growth	57
3.6.7. Price Elasticity of Demand	62
3.7. Logarithms and Logarithmic Function	66
3.7.1. Logarithms	66
3.7.2. Logarithmic Function	68
3.7.3. Logarithmic Equations	69
3.7.4. Logarithmic Inequalities	71
3.7.5. Nonlinear Demand-Supply Model (Revisited)	73
4. Operations on Graphs	78
4.1. Reflection over the x -axis	78
4.2. Reflection over the y -axis	79
4.3. Horizontal Translation (Horizontal Slide)	81
4.4. Vertical Translation (Vertical Slide)	82
4.5. Horizontal Stretch or Compress	83
4.6. Vertical Stretch or Compress	85
4.7. Partial Reflection over the x -axis	86
4.8. Partial Reflection over the y -axis	87
5. Sequences	93
5.1. The Definition and Main Properties of Sequences	93
5.2. Arithmetic Sequence	99
5.3. Geometric Sequence	101
5.4. Applications in Financial Arithmetic	104
Bibliography	108
