

Contents

Introduction	3
1. Numerical and Function Series	5
1.1 Numerical Series	5
1.2 Function Series	14
1.3 Products	19
1.4 Summation Methods for Finite and Infinite Series	21
2. Calculus of Finite Differences and Sums	31
2.1 Basic Concepts of the Theory of Finite Differences and Sums	31
2.2 Indefinite and Definite Sums	39
2.3 Calculus of Finite Differences and Sums used for Summation of Series	43
3. Introduction to Difference Equations and Discrete Modeling of Economic Processes	51
3.1 First- and Second-Order Linear Difference Equations and Solution Methods	51
3.2 Equilibrium Points, Stability and Limiting Behaviour of Solutions of Difference Equations	67
3.3 Applications of Difference Equations in Economics – Some Examples	77
4. Dynamics of Demand and Supply	89
4.1 The Cobweb Model with Price Restrictions	89
4.2 Supply and Demand in the Market with Stocks	99

4.3	Adaptive Models	104
4.4	Interrelated Markets	111
5.	Dynamics of Investment and Consumption Growth	123
5.1	Kahn's Multiplier and Samuelson's and Hicks' Accelerator	123
5.2	Goods Market and Money Market	132
5.3	Inputs, Outputs and Demand for Capital	137
6.	History of the Calculus of Finite Differences	143
	Bibliography.	155
