

Table of contents

Definitions and symbols	7
1. Introduction	10
2. Technological process of assembly	13
2.1. Role and importance of assembly in the technical preparation of production...	14
2.2. Designing the technological assembly process.....	17
2.3. Integrated assembly model	21
2.4. Automation and robotisation of the technological process of assembly.....	22
2.5. Assembly sequence planning	25
2.6. Conclusions	35
3. Assembly sequence planning with a directed hypergraph, digraph, state matrix and graph	38
3.1. Introduction	38
3.2. Base Part Selection.....	39
3.3. From hypergraph to directed graph	42
3.4. Matrix representation of the design	44
3.5. Assessment of transitions between assembly states	46
3.6. Selection of the extreme path in a directed graph.....	48
3.7. Example of an algorithm for ASP	51
3.8. Determining the assembly sequence with the use of the Massembly software...	54
3.9. An example of a flexible robotic assembly system	59
3.10. Assumptions for a flexible robotic assembly system.....	59
3.11. Assembly unit identification system.....	62
3.12. Generation of assembly sequences feasible in terms of design constraints	64
3.13. Assembly sequence assessment.....	66
3.14. Conclusions	67
4. Example of modelling and simulation of the technological process of assembly of a machining centre	68
4.1. Introduction	68
4.2. Measurements of labour input required for individual operations.....	69
4.2.1. Timing stages	69
4.3. Stages of conducting a working day activity study	72
4.4. The technological process of assembly of the machining centre.....	74
4.5. CAD simulation.....	75
4.5.1. Introduction.....	75
4.5.2. CAD System	76
4.5.3. Modelling assemblies (products)	76
4.5.4. Presentation and documentation of assembly.....	79

4.6. Balancing the final assembly line of the machining centre.....	81
4.7. Modelling and simulation of the technological process of assembly of a machining centre.....	88
4.8. Development of work regulations, methods of communication and the algorithm of the functioning of the information and diagnostic system as part of the active control and supervision of operation of the assembly line ...	93
4.8.1. Assumptions.....	93
4.8.2. System structure.....	95
4.8.3. System operation.....	97
4.9. Simulation tests of the information and diagnostic system and the technological process of assembly of the machining centre; adopting the final structure	109
4.9.1. Simulation tests of the information and diagnostic system and the technological process of assembly of the machining centre	109
4.9.2. Conclusions.....	117
5. Modelling and simulation of the technological assembly process, taking into account MTBF.....	119
5.1. Mean Time Between Failures – MTBF	119
5.2. The process of assembling the dashboard to the car body	120
5.3. Modelling and simulation of the assembly cell for assembling the dashboard to the car body	121
5.4. Conclusions	124
6. Examination of the efficiency of the assembly cell for the assembly of the main spindle to the turning centre	126
6.1. Assembly technology of the main headstock.....	126
6.2. Examination of the labour input required for the assembly operations	127
6.3. Operation sequence	128
6.4. Modelling and simulation of the assembly cell	128
6.5. Conclusions	131
7. Summary and conclusions.....	135
