

CONTENTS

Preface	7
1. Introduction	11
2. Theory of Vectors	15
2.1. Basic Properties and Operations	19
2.2. Scalar Product of Vectors	27
2.3. Vector product of Vectors	33
2.4. Triple Scalar Product.....	41
2.5. Triple Vector Product	44
2.6. Vector-valued Functions	45
3. Kinematics of particles	47
3.1. Position vector	48
3.2. Main cases of dedicated and limited sub-problems	49
3.3. Vector of linear velocity	50
3.4. Vector of linear acceleration	52
3.5. Kinematics expressed in curvilinear coordinates.....	52
3.6. Trajectory attached coordinates and Frenet's trihedron.....	53
3.7. Velocities and accelerations expressed in the intrinsic coordinate system (in the tangent/normal coordinates).....	56
3.8. Polar Coordinates	65
3.9. Cylindrical Coordinates	69
3.10. Spherical Coordinates	71
3.11. Relative motion, transport motion and the transport theory	77
4. Dynamics of particles	93
4.1. Newton's first law of mechanics and inertial frames of reference	94
4.2. Newton's second law of mechanics; inertia; masses and forces.....	94
4.3. Static equilibrium.....	96
4.4. Kinetostatics	96
4.5. Dynamics in noninertial reference systems	97
4.6. Relative equilibrium.....	100
4.7. Linear momentum.....	100
4.8. Angular momentum	103
4.9. Work and energy	105
4.10. Variable mass objects and their dynamics equation.....	115

5. Spherical motion of rigid bodies	118
5.1. Direction cosine matrix	119
5.2. Attitude parameters in description of spherical motion	120
5.3. Euler's Angles	124
5.4. Transformation matrices related to individual Euler's angles	126
5.5. Coordinates of vectors resolved in different frames	128
5.6. Angular velocity	129
5.7. Angular velocities of Euler's angles	131
5.8. Linear velocities of points of the moving body	137
5.9. Angular acceleration	140
5.10. Linear acceleration of points of the moving body	141
5.11. Conical surfaces formed by instantaneous axes of angular velocity	145
5.12. Steady precession	148
5.13. Angular momentum of body in spherical motion	156
5.14. Time derivative of angular momentum	163
5.15. Dynamics equations	166
5.16. Kinetic energy	170
6. General motion of rigid bodies	173
6.1. Parameters of the general displacement	174
6.2. Linear velocity and linear acceleration of generic point of the moving body	175
6.3. Linear momentum of rigid body	178
6.4. Angular momentum of rigid body	180
6.5. Dynamics equations	182
6.6. Kinetic energy	188
7. Simplified theory of gyroscope	193
8. Lagrange proposed reformulation of mechanics	202
8.1. Origins	202
8.2. Constraints	204
8.3. Free and constrained mechanical systems	209
8.4. Main categories of constraints	209
8.4.1. Unilateral and bilateral constraints	209
8.4.2. Scleronomous and rheonomous constraints	211
8.4.3. Holonomous and non-holonomous constraints	213
8.4.4. Holonomous and non-holonomous mechanical systems	218
8.4.5. Total, partial and rigid-body constraints	218
8.4.6. Ideal and real constraints	219
8.5. Position based equations and their velocity based alternatives	222
8.6. Physical quantities used to describe poses of mechanical system	225
8.6.1. Degrees of freedom	225

8.6.2. Generalizes coordinates	225
8.6.3. Functions that correlate different forms of generalized coordinates.....	229
8.6.4. Equations that correlate Cartesian coordinates and generalized coordinates	230
8.6.5. Configuration space	232
8.7. Virtual displacement and the virtual work principle.....	233
8.7.1. Admissible and non-admissible displacements of mechanical systems.....	234
8.7.2. Virtual displacements.....	234
8.7.3. Fields of correlated virtual displacements	237
8.7.4. Virtual displacements resulting of spherical motion of rigid body.....	243
8.7.5. Virtual displacements and virtual works of real forces.....	247
8.7.6. The virtual work principle	248
8.7.7. Equilibrium of rigid body – conditions resulting from the virtual work principle	250
8.7.8. Virtual displacements of generalized coordinates.....	252
8.7.9. Changes of Cartesian components associated to virtual displacements of generalized coordinates	254
8.7.10. Generalized forces and their rearranged virtual work formula	257
8.7.11. Generalized forces for systems acted upon by conservative forces ...	261
8.7.12. Virtual velocities	264
8.7.13. The virtual power principle.....	268
8.7.14. The virtual work principle in case of motionless systems	271
8.7.15. Other formulas useful to confirm the equilibrium	275
8.8. Kinetostatics, virtual displacements and velocities	278
8.8.1. Relative equilibrium in rheonomous systems	278
8.8.2. d'Alembert's principle	282
8.8.3. Jourdin's principle.....	286
8.8.4. Dynamics resolved in generalized coordinates.....	288
8.9. Lagrange's equations of dynamics.....	292
8.9.1. Formulas useful in developments of Lagrange's equations	293
8.9.2. Lagrange's equations of dynamics.....	296
8.9.3. Lagrange's equations – case of conservative forces	299
8.9.4. Lagrange's equations – case of both conservative and non-conservative forces	301
8.9.5. Lagrangian based reformulation of Lagrange's equations.....	302
8.10. Dynamics expressed in dependent coordinates.....	303
8.10.1. Lagrange's equations of the first kind.....	304
8.10.2. Generalized forces of constraints.....	308
8.10.3. Dynamics of mathematical pendulum	314
8.10.4. Integration of the calculated accelerations.....	318
Farewells	320
Bibliography	321
