|          |                                                                 |          |
|----------|-----------------------------------------------------------------|----------|
| <b>1</b> | <b>Computers in Manufacturing</b>                               | <b>1</b> |
| 1.1      | Introduction                                                    | 1        |
| 1.1.1    | Importance of Manufacturing                                     | 1        |
| 1.1.2    | Scale and Complexity of Manufacturing                           | 2        |
| 1.1.3    | Human Roles in Manufacturing                                    | 4        |
| 1.1.4    | Computers in Advanced Manufacturing                             | 6        |
| 1.2      | Computer Aided Technologies (CATs)                              | 7        |
| 1.3      | CATs for Engineering Designs                                    | 10       |
| 1.3.1    | Engineering Design in a Manufacturing System                    | 10       |
| 1.3.2    | Importance of Engineering Design                                | 10       |
| 1.3.3    | Types of Design Activities                                      | 12       |
| 1.3.4    | Human Versus Computers                                          | 13       |
| 1.3.5    | Human and Machine Interactions                                  | 14       |
| 1.4      | Architecture of Computer Aided Systems                          | 15       |
| 1.4.1    | Hardware Components                                             | 15       |
| 1.4.2    | Computer Software Systems                                       | 17       |
| 1.4.3    | Servers, Networking, and Cloud Technologies                     | 18       |
| 1.5      | Computer Aided Technologies in Manufacturing                    | 20       |
| 1.6      | Limitation of the Existing Manufacturing Engineering Curriculum | 22       |
| 1.7      | Course Framework for Digital Manufacturing                      | 24       |
| 1.8      | Design of the CAD/CAM Course                                    | 25       |
| 1.8.1    | Existing Design of the CAD/CAM Course                           | 26       |
| 1.8.2    | Customization of the CAD/CAM Course                             | 27       |
| 1.9      | Summary                                                         | 28       |
| 1.10     | Review Questions                                                | 29       |
|          | References                                                      | 30       |

**Part I Computer Aided Design (CAD) 35****2 Computer Aided Geometric Modelling 37**

- 2.1 Introduction 37
- 2.2 Basic Elements in Geometry 38
  - 2.2.1 Coordinate Systems 39
  - 2.2.2 Reference Points, Lines, and Planes 40
  - 2.2.3 Coordinate Transformation of Points 43
  - 2.2.4 Coordinate Transformation of Objects 43
- 2.3 Representation of Shapes 53
  - 2.3.1 Basic Data Structure 54
  - 2.3.2 Curvy Geometric Elements 56
  - 2.3.3 Euler–Poincare Law for Solids 63
- 2.4 Basic Modelling Methods 63
  - 2.4.1 Wireframe Modelling 63
  - 2.4.2 Surface Modelling 64
  - 2.4.3 Boundary Surface Modelling (B-Rep) 65
  - 2.4.4 Space Decomposition 67
  - 2.4.5 Solid Modelling 68
    - 2.4.5.1 Solid Primitives 69
    - 2.4.5.2 Composition Operations 70
    - 2.4.5.3 CSG Modelling 72
    - 2.4.5.4 Modelling Procedure 72
    - 2.4.5.5 Data Structure of CSG Models 72
- 2.5 Feature-Based Modelling with Design Intent 74
- 2.6 Interactive Feature-Based Modelling Using CAD Tools 77
- 2.7 Summary 80
- 2.8 Modelling Problems 81
- References 83

**3 Knowledge-Based Engineering 85**

- 3.1 Generative Model in Engineering Design 85
- 3.2 Knowledge-Based Engineering 85
- 3.3 Parametric Modelling 87
  - 3.3.1 Define Basic Geometric Elements 89
    - 3.3.1.1 Parametrized Points 89
    - 3.3.1.2 Parametrized Lines 91
    - 3.3.1.3 Parametrized Surfaces 91
    - 3.3.1.4 Parametrized Curves 93
    - 3.3.1.5 Parametrized Surfaces 94
  - 3.3.2 Types of Parameters 95
  - 3.3.3 Geometric Constraints and Relations 99
    - 3.3.3.1 Dimensional Parameters 99
    - 3.3.3.2 Geometric Constraints 100

|          |                                                                 |            |
|----------|-----------------------------------------------------------------|------------|
| 3.4      | Design Intent                                                   | 101        |
| 3.4.1    | Default Location and Orientation of a Part                      | 101        |
| 3.4.2    | First Sketch Plane                                              | 103        |
| 3.5      | Design Equations                                                | 103        |
| 3.6      | Design Tables                                                   | 105        |
| 3.7      | Configurations as Part Properties                               | 111        |
| 3.8      | Design Tables in Assembly Models                                | 114        |
| 3.9      | Design Tables in Applications                                   | 116        |
| 3.10     | Design Templates                                                | 117        |
| 3.11     | Summary                                                         | 119        |
| 3.12     | Design Problems                                                 | 119        |
|          | References                                                      | 122        |
| <b>4</b> | <b>Platform Technologies</b>                                    | <b>125</b> |
| 4.1      | Concurrent Engineering (CE)                                     | 125        |
| 4.1.1    | Brief History                                                   | 125        |
| 4.1.2    | Needs of CE                                                     | 125        |
| 4.1.3    | Challenges of CE Practice                                       | 128        |
| 4.1.4    | Concurrent Engineering (CE) and Continuous Improvement (CI)     | 128        |
| 4.2      | Platform Technologies                                           | 130        |
| 4.3      | Modularization                                                  | 130        |
| 4.4      | Product Platforms                                               | 132        |
| 4.5      | Product Variants and Platform Technologies                      | 135        |
| 4.6      | Fundamentals to Platform Technologies                           | 138        |
| 4.7      | Design Procedure of Product Platforms                           | 142        |
| 4.8      | Modularization of Products                                      | 142        |
| 4.8.1    | Classification of Functional Requirements (FRs)                 | 143        |
| 4.8.2    | Module-Based Product Platforms                                  | 143        |
| 4.8.3    | Scale-Based Product Family                                      | 145        |
| 4.8.4    | Top-Down and Bottom-Up Approaches                               | 146        |
| 4.9      | Platform Leveraging in CI                                       | 149        |
| 4.10     | Evaluation of Product Platforms                                 | 153        |
| 4.10.1   | Step 1. Representation of a Modularized Platform                | 155        |
| 4.10.2   | Step 2. Mapping a Modular Architecture for Robot Configurations | 156        |
| 4.10.3   | Step 3. Determine Evaluation Criteria of a Product Platform     | 156        |
| 4.10.4   | Step 4. Evaluate Platform Solutions                             | 159        |
| 4.11     | Computer Aided Tools (CAD) for Platform Technologies            | 160        |
| 4.11.1   | Modelling Techniques of Product Variants                        | 163        |
| 4.11.2   | Design Toolboxes                                                | 163        |
| 4.11.3   | Custom Design Libraries                                         | 164        |
| 4.12     | Summary                                                         | 165        |
| 4.13     | Design Projects                                                 | 166        |
|          | References                                                      | 169        |

**5 Computer Aided Reverse Engineering 173**

- 5.1 Introduction 173
- 5.2 RE as Design Methodology 175
- 5.3 RE Procedure 178
- 5.4 Digital Modelling 179
  - 5.4.1 Types of Digital Models 180
  - 5.4.2 Surface Reconstruction 181
  - 5.4.3 Algorithms for Surface Reconstruction 181
  - 5.4.4 Limitations of Existing Algorithms 182
  - 5.4.5 Data Flow in Surface Reconstruction 183
  - 5.4.6 Surface Reconstruction Algorithm 184
  - 5.4.7 Implementation Examples 186
- 5.5 Hardware Systems for Data Acquisition 188
  - 5.5.1 Classification of Hardware Systems 191
  - 5.5.2 Positioning of Data Acquisition Devices 197
  - 5.5.3 Control of Scanning Processes 199
  - 5.5.4 Available Hardware Systems 200
- 5.6 Software Systems for Data Processing 201
  - 5.6.1 Data Filtering 201
  - 5.6.2 Data Registration and Integration 204
  - 5.6.3 Feature Detection 205
  - 5.6.4 Surface Reconstruction 205
  - 5.6.5 Surface Simplification 205
  - 5.6.6 Segmentation 206
  - 5.6.7 Available Software Tools 206
- 5.7 Typical Manufacturing Applications 206
- 5.8 Computer Aided Reverse Engineering (CARE) 208
  - 5.8.1 Recap to Convert Sensed Data into Polygonal Models 209
  - 5.8.2 ScanTo3D for Generation of Parametric Models 211
  - 5.8.3 RE of Assembled Products 212
- 5.9 RE – Trend of Development 213
- 5.10 Summary 213
- 5.11 Design Project 214
- References 215

**6 Computer Aided Machine Design 219**

- 6.1 Introduction 219
- 6.2 General Functional Requirements (FRs) of Machines 222
- 6.3 Fundamentals of Machine Design 223
  - 6.3.1 Link Types 223
  - 6.3.2 Joint Types and Degrees of Freedom (DoFs) 223
  - 6.3.3 Kinematic Chains 225
  - 6.3.4 Mobility of Mechanical Systems 226
- 6.4 Kinematic Synthesis 230
  - 6.4.1 Type Synthesis 230

|         |                                                                  |     |
|---------|------------------------------------------------------------------|-----|
| 6.4.2   | Number Synthesis                                                 | 230 |
| 6.4.3   | Dimensional Synthesis                                            | 232 |
| 6.5     | Kinematics                                                       | 233 |
| 6.5.1   | Positions of Particles, Links, and Bodies in 2D and 3D Space     | 233 |
| 6.5.2   | Motions of Particles, Links, and Bodies                          | 235 |
| 6.5.3   | Vector-Loop Method for Motion Analysis of a Plane Mechanism      | 240 |
| 6.5.3.1 | Kinematic Parameters and Variables                               | 244 |
| 6.5.3.2 | Inverse Kinematics                                               | 245 |
| 6.5.3.3 | Direct Kinematics                                                | 246 |
| 6.5.4   | Kinematic Modelling Based on Denavit–Hartenberg (D-H) Parameters | 246 |
| 6.5.5   | Jacobian Matrix for Velocity Relations                           | 248 |
| 6.6     | Dynamic Modelling                                                | 259 |
| 6.6.1   | Inertia and Moments of Inertia                                   | 259 |
| 6.6.2   | Newton–Euler Formulation                                         | 261 |
| 6.6.2.1 | Inertia Force/Moment                                             | 263 |
| 6.6.2.2 | Force Equilibrium Equations                                      | 264 |
| 6.6.2.3 | Dynamic Model and Solution                                       | 265 |
| 6.6.3   | Lagrangian Method                                                | 266 |
| 6.7     | Kinematic and Dynamics Modelling in Virtual Design               | 269 |
| 6.7.1   | Motion Simulation                                                | 269 |
| 6.7.2   | Model Preparation                                                | 271 |
| 6.7.3   | Creation of a Simulation Model                                   | 271 |
| 6.7.4   | Define Motion Variables                                          | 274 |
| 6.7.5   | Setting Simulation Parameters                                    | 275 |
| 6.7.6   | Run Simulation and Visualize Motion                              | 275 |
| 6.7.7   | Analyse Simulation Data                                          | 276 |
| 6.7.8   | Structural Simulation Using Motion Loads                         | 277 |
| 6.8     | Summary                                                          | 278 |
| 6.9     | Design Project                                                   | 279 |
|         | References                                                       | 279 |
