Acronyms and abbreviations	5
Foreword	7
1. Introduction	9
2. Ships at berth – threat to the environment	14
2.1. Description	14
2.2. Air pollution sources in port cities	15
2.3. Estimation of exhaust emissions in ports	18
2.3.1. Methods of estimating emission by ships at berth	18
2.3.2. Emission estimation methodology for ships at berth	19
3. Ships at berth – possibilities of reducing environmental threats	30
3.1. International regulations and regulations for protected areas	30
3.2. Alternative technologies of ship emission control	33
3.3. Advanced control system for ship emission in ports	33
3.4. Shore-to-ship connection as an effective method of reducing the emission by ships at berth	34
3.4.1. STS standardization	36
3.4.2. STS arrangements used so far	37
4. Topology and elements of the STS system	43
4.1. Topology of the “Shore to ship” system	45
4.2. The main elements of the STS system	52
4.2.1. AC/AC converter for the STS system	52
4.2.2. Adjusting transformers	55
4.2.3. Cables and connective elements	56
5. Quality of supply in STS power systems	59
5.1. The voltage distortion in relation to the first harmonic	60
5.2. Synchronization in STS systems	62
5.3. Investigation of synchronization STS system	67
6. STS suppliers review and specific system proposals	70
6.1. ABB	70
6.2. Cavotec	72
6.3. SAM Electronics	73
6.4. Siemens	74
6.5. Schneider Electric	75
6.6. TEMCo	76
6.7. Cochran Marine	76
6.8. Terasaki	77

7. Implementation of STS system in modern ports	78
7.1. Port of Antwerp	79
7.2. Port of Gothenburg	80
7.3. Port of Ystad	82
8. STS system example at ferry terminals and Poland–Sweden route	85
8.1. STS system – a general concept	85
8.2. Ship electric system and STS for RO PAX vessel	86
8.3. The ship's impact on the natural environment while mooring	88
8.4. Forecasted operating costs vs. shore connection	91
9. Conclusions	93
Bibliography	95
