

Table of Content

1. Introduction – Anna Starzewska-Sikorska	11
2. The idea of circular land use management – Anna Starzewska-Sikorska	13
2.1. Introduction	13
2.2. The principle of reuse and phases of land use	15
2.3. Potential of circular land use management	15
2.4. CIRCUSE project	16
2.5. Conclusion	21
References	21
3. Integration of land use management with sustainable environmental management in relation to land as a resource – Anna Starzewska-Sikorska	22
3.1. Introduction	22
3.2. Action plans	24
3.3. Pilot actions	26
3.4. The project effects	31
References	33
4. Remediation technologies for environmental management to improve the safety and comfort of living in urban areas – an example of application in Ruda Śląska – Marta Pogrzeba, Alicja Szada-Borzyszkowska	34
4.1. Introduction	34
4.2. Site description	35
4.2.1. Physico-chemical characteristics of top layer of the brownfield ...	37
4.2.2. Plant cover of the brownfield	38
4.3. Aided phytostabilisation	38
4.4. Soil amendments for diminishing metals bioavailability	39
4.5. Plant species used for aided phytostabilisation of soil contaminated with heavy metals	40
4.6. Experiment design	41
4.7. Results	42
4.7.1. Initial soil characteristics	42
4.7.2. Changes in physico-chemical parameters	42
4.7.3. Concentration of heavy metals in plant tissues	43
4.8. Discussion	46
4.9. Conclusions	47
References	47
5. Application of robust estimators of dispersion and local indicators of spatial associations in assessment of soil contamination – Joachim Bronder	53

5.1. Introduction	53
5.2. Method	54
5.2.1. Classical approach	54
5.2.2. Robust estimator of location	55
5.2.3. Robust estimators of dispersion	55
5.2.4. Confidence intervals of estimators of location	57
5.2.5. Normalisation through regionalisation	58
5.3. The workout case studies	60
5.3.1. Site No. 1 – Former military airbase in Szprotawa	60
5.3.2. Site No. 2 – Łęgowo-Wieś settlement, city district of Bydgoszcz ...	62
5.4. Conclusions	69
References	70
6. Urban environmental acupuncture for improving access to green spaces in cities – example from an urban region in Central Europe – Marta Fudała	73
6.1. Introduction	73
6.2. Action Plan for FUA	74
6.3. GIS analysis	75
6.4. Chorzów Case Study	80
6.5. Conclusions	83
References	84
7. Reduction of forest and agriculture land on urban areas basing on the analysis of statistical and spatial data – Magdalena Głogowska	87
7.1. Introduction	87
7.2. The role of green spaces in the city in adapting to climate change	88
7.3. Introduction and scope of work	89
7.4. The results of the analyzes	92
7.4.1. Statistical analyzes of SP data	92
7.4.2. Selection of three cities with the greatest decline in agricultural and forest area	92
7.4.3. GIS analysis	97
7.4.3.1. Calculation of land cover change according to Urban Atlas 2006 and 2012 (7-year time period)	97
7.4.3.2. Calculation of the NDVI index (Normalized Difference Vegetation Index)	107
7.4.4. Identification of data gaps	110
7.5. Conclusions	111
References	112
8. Health risk assessment in contaminated site management – Eleonora Wcisło ...	116
8.1. Introduction	116
8.2. Polish perspective	118
8.2.1. Legal background	118
8.2.2. The proposed risk-based approach to contaminated sites	119
8.2.2.1. Site-specific human health risk assesment	120
8.2.2.2. Development of RBRLs and RBSSLs	127
8.2.3. Significant health risk assessment	129
8.3. Conclusions	130
References	131

9. Application of air pollutant emission and air quality forecasts for better air quality management and improvement of living conditions of the inhabitants at a local level – Janina Fudała	136
9.1. Introduction	136
9.2. Air quality forecasting system	137
9.3. The use of emission forecasts and air quality forecasts for air quality management	141
9.4. Conclusions	147
References	148
10. Spatial aspects of waste management in inhabited areas of Poland – Marek Matejczyk	149
10.1. Introduction	149
10.2. Legal conditions for collecting solid waste in inhabited areas	150
10.3. Implementation of the obligation to collect waste by property owners ..	151
10.4. Demography and housing statistics	152
10.5. Estimation of the space occupied by waste collection sites in inhabited areas	155
10.6. Solutions reducing the use of space and expenses	155
10.7. Conclusions	157
References	158
11. Comprehensive inventory of the post-industrial area in terms of restoring the site functions and re-use of waste. Case study of industrial heap of unknown origin – Mariusz Kalisz, Oktawian Pastucha	159
11.1. Introduction	159
11.2. Materials and methods	160
11.3. Site characterisation	161
11.4. Historical analysis – Age determination and genesis of the heap	162
11.5. Results	164
11.6. Discussion	167
11.6.1. Physical properties of the waste	167
11.6.2. Basic physico-chemical analyses	170
11.6.3. Contaminant content assessment and evaluation of geochemical parameters	170
11.6.4. Waste and subsoil contamination assessment in individual samples	171
11.6.5. Overall assessment of the heap contamination	172
11.6.6. Thermal activity assessment	173
11.6.7. Calculations of the volume and weight of the heap	173
11.6.8. Characteristics of the stored mineral waste according to waste classification	174
11.7. Conclusions	176
References	177
