Introduction	5
1 Measures of non-compactness	15
1.1 Basic properties and examples	15
1.2 Applications	39
1.3 Exercises	62
1.4 Notes and remarks	64
2 Fixed point theory	67
2.1 Fixed points of Lipschitz mappings	69
2.2 Compactness and fixed points	79
2.3 Leray–Schauder alternative	103
2.4 Applications	110
2.5 Exercises	124
2.6 Notes and remarks	126
3 Hyperconvex metric spaces	131
3.1 Basic definitions and examples	132
3.2 Hyperconvex Banach spaces	143
3.3 Extending mappings	151
3.4 Hyperconvex hulls	157
3.5 Around Baillon’s intersection theorem	169
3.6 Fixed points in hyperconvex spaces	182
3.7 Exercises	192

3.8	Notes and remarks	193
4	Almost periodic functions	199
4.1	Periodic functions	201
4.2	Almost periodic functions	225
4.3	Mean value	245
4.4	Fourier series of almost periodic functions	260
4.5	The space $AP(\mathbb{R})$	270
4.6	Applications	287
4.7	Exercises	294
4.8	Notes and remarks	296
5	Perturbations of AP functions	303
5.1	Basic notions	304
5.2	AAP and PAP functions	306
5.3	The spaces $AAP(\mathbb{R})$ and $PAP(\mathbb{R})$	329
5.4	Applications	337
5.5	Exercises	342
5.6	Notes and remarks	343
6	Functions of bounded variation	347
6.1	Basic properties and examples	349
6.2	The variation as a function	370
6.3	Further properties of BV functions	374
6.4	The space $BV[a, b]$	404
6.5	Applications	424
6.6	Exercises	435
6.7	Notes and remarks	437
	Preliminaries	445
	Bibliography	469
	Index of symbols	483
	Index of notions	485
