PART A. LECTURES

| | |
|---------------------------|-----------|
| FUNDAMENTALS | 15 |
|---------------------------|-----------|

| | |
|---|----|
| Adsorption – a phenomenological description | 15 |
|---|----|

| | |
|----------------------|----|
| Trace analysis | 16 |
|----------------------|----|

| | |
|--|-----------|
| SAMPLE PREPARATION TECHNIQUES | 19 |
|--|-----------|

| | |
|--------------------|----|
| Introduction | 19 |
|--------------------|----|

| | |
|---------------------------------|----|
| Silica-based SPE sorbents | 23 |
|---------------------------------|----|

| | |
|--|----|
| Physical and chemical properties of silica | 24 |
|--|----|

| | |
|---|----|
| Evaluation of formats, sorbent types and modes of interaction in SPE | 27 |
|---|----|

| | |
|--|----|
| Stationary phases preparation and architecture | 31 |
|--|----|

| | |
|--|----|
| Physicochemical characterization of sorbents | 34 |
|--|----|

| | |
|------------------------------------|-----------|
| LIQUID CHROMATOGRAPHY | 39 |
|------------------------------------|-----------|

| | |
|--------------------|----|
| Introduction | 39 |
|--------------------|----|

| | |
|------------------------------|----|
| Stationary phase in LC | 43 |
|------------------------------|----|

| | |
|-------------|----|
| NP-LC | 43 |
|-------------|----|

| | |
|-------------|----|
| RP-LC | 44 |
|-------------|----|

| | |
|-------------|----|
| HILIC | 48 |
|-------------|----|

| | |
|--------------------------|----|
| Mobile phase in LC | 49 |
|--------------------------|----|

| | |
|-------------|----|
| NP-LC | 51 |
|-------------|----|

| | |
|-------------|----|
| RP-LC | 52 |
|-------------|----|

| | |
|-------------|----|
| HILIC | 54 |
|-------------|----|

| | |
|----------------------------|----|
| Separation mechanism | 55 |
|----------------------------|----|

| | |
|---|----|
| Qualitative and quantitative analysis | 57 |
|---|----|

| | |
|---|-----------|
| APPLICATIONS | 59 |
| Statistical and chemometric analysis..... | 60 |

PART B. EXERCISES

| | |
|---|-----|
| <i>Exercise 1</i> | |
| Determination of hydrophobicity and identification of parabens in cosmetics by liquid chromatography with spectrophotometric detection..... | 78 |
| <i>Exercise 2</i> | |
| SPE extraction and determination of psychotropic drugs and their metabolites from plasma samples by liquid chromatography | 91 |
| <i>Exercise 3</i> | |
| LLE extraction and determination of fuel residues in water samples by gas chromatography..... | 104 |
| <i>Exercise 4</i> | |
| SPE extraction and determination of inorganic anions in dental care products by ion chromatography | 110 |
| <i>Exercise 5</i> | |
| Analysis of inorganic cations in plasma samples by isotachopheresis | 131 |
| <i>Exercise 6</i> | |
| Qualitative and quantitative determination of caffeine in cosmetics using electromigration techniques | 151 |
| <i>Exercise 7</i> | |
| Application of thin layer chromatography in the analysis of compounds imitating drugs..... | 167 |
| <i>Exercise 8</i> | |
| Determination of the total content of organic compounds in cosmetic products | 175 |
| <i>Exercise 9</i> | |
| Determination of acetylsalicylic acid residue in treated wastewater | 178 |
| <i>Exercise 10</i> | |
| Membrane separation – extraction of phenol from an aqueous solution using liquid membranes..... | 191 |
