|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Mathematical Tables . . . . .<br><i>Robert H. Perry</i>                                                                                                                                        | 1       |
| Mathematics . . . . .<br><i>Arthur E. Hoerl, William F. Ames, Robert J. Hunn, John J. McKetta,<br/>I. H. Silberberg</i>                                                                        | 2       |
| Physical and Chemical Data . . . . .<br><i>Peter E. Liley, Yeram S. Touloukian, W. R. Gambill</i>                                                                                              | 3       |
| Reaction Kinetics, Reactor Design, and Thermodynamics . . . . .<br><i>Robert H. Perry, C. M. Stiepceovich, Donald Finn, Donald W. Green, Riki<br/>Kobayashi, Thomas W. Leland, J. M. Smith</i> | 4       |
| Fluid and Particle Mechanics . . . . .<br><i>Donald F. Boucher, George E. Alves</i>                                                                                                            | 5       |
| Transport and Storage of Fluids . . . . .<br><i>Raymond P. Genereaux, Philip P. O'Neill, Joseph C. Thompson, William D.<br/>Webb</i>                                                           | 6       |
| Solids Transport and Storage . . . . .<br><i>Robert G. Zilly</i>                                                                                                                               | 7       |
| Size Reduction and Size Enlargement . . . . .<br><i>Lincoln T. Work, Arthur L. Stern</i>                                                                                                       | 8       |
| Heat Generation, Transport, and Storage . . . . .<br><i>Charles E. Day, Jr., Rowan P. Perkins, Elmer S. Monroe, Jr., Frederick M.<br/>Brunn, A. C. Mueller, D. Barton Turkington</i>           | 9       |
| Heat Transmission . . . . .<br><i>Charles H. Gilmour, Hoyt C. Hottel, Eric Weger</i>                                                                                                           | 10      |
| Heat-transfer Equipment . . . . .<br><i>Frank L. Rubin, David Stuhlbarg, F. C. Standiford, Arthur D. Holt</i>                                                                                  | 11      |
| Refrigeration . . . . .<br><i>Carl F. Kayan, Victor J. Johnson</i>                                                                                                                             | 12      |
| Distillation . . . . .<br><i>J. A. Gerster</i>                                                                                                                                                 | 13      |
| Gas Absorption and Solvent Extraction . . . . .<br><i>R. E. Emmert, R. L. Pigford</i>                                                                                                          | 14      |
| Humidification and Drying . . . . .<br><i>Eno Bagnoli, Frank H. Fuller, Robert W. Norris</i>                                                                                                   | 15      |
| Adsorption and Ion Exchange . . . . .<br><i>Nevin K. Hiester, Theodore Vermeulen, Gerhard Klein</i>                                                                                            | 16      |
| Other Diffusional Operations . . . . .<br><i>Karl Kammermeyer, K. C. D. Hickman, Coleman J. Major, G. P. Monet,<br/>James O. Osburn, John E. Powers, J. W. Riggle, Lenard O. Rutz</i>          | 17      |

|                                                                                                                                                                                                                                                                       |    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| Liquid-Gas Systems . . . . .                                                                                                                                                                                                                                          | 18 |
| <i>Aaron J. Teller, Shelby A. Miller, Edward G. Scheibel</i>                                                                                                                                                                                                          |    |
| Liquid-Solid Systems . . . . .                                                                                                                                                                                                                                        | 19 |
| <i>Julian C. Smith, Charles M. Ambler, H. Leslie Bullock, Donald A. Dahlstrom, Lawrence A. Dale, Robert C. Emmett, Jr., C. Fred Gurnham, Robert F. McNamara, A. W. Michelson, Shelby A. Miller, Julian Nardi, James Y. Oldshue, J. Tom Roberts, Edward R. Vrablik</i> |    |
| Gas-Solid Systems . . . . .                                                                                                                                                                                                                                           | 20 |
| <i>Paul Y. McCormick, Robert L. Lucas, David F. Wells</i>                                                                                                                                                                                                             |    |
| Gas-Gas, Liquid-Liquid, and Solid-Solid Systems . . . . .                                                                                                                                                                                                             | 21 |
| <i>Sherman S. Weidenbaum, F. William Bloecher, Jr., William J. Bronkala, Edwin E. Cockrell, Paul E. Cook, Fred D. DeVaney, William F. Dyrenforth, Morgan C. Sze, Robert E. Treybal, Glenn O. Wilson</i>                                                               |    |
| Process Control . . . . .                                                                                                                                                                                                                                             | 22 |
