Foreword.....4

Introduction5

1 Scope6

2 Normative references6

3 Terms and definitions6

4 Coordinate system.....7

5 Load cases7

5.1 Categories of freight wagons7

5.2 Load cases8

5.2.1 General.....8

5.2.2 Longitudinal static loads for the vehicle body in buffer and/or coupling area8

5.2.3 Vertical static loads for the vehicle body10

5.2.4 Static loads at interfaces12

5.2.5 Fatigue load cases.....13

6 Design validation of vehicle body.....14

6.1 General.....14

6.2 Design validation of vehicle bodies made of steel.....14

6.2.1 Characteristics and requirements with regard to the test setup, measuring and evaluation techniques14

6.2.2 Permissible test threshold values for material tension – Permissible stresses for proof tests.....17

6.2.3 Static tests to prove the fatigue strength of vehicle bodies18

6.2.4 Assignment of load cases and permissible stresses23

6.3 Design validation link to crashworthy buffer.....24

7 Design validation of associated specific equipment25

7.1 General.....25

7.2 Static tests on the flaps of flat wagons25

7.2.1 Side wall flap25

7.2.2 End flap.....27

7.2.3 Results29

7.3 Strength of side and end walls.....29

7.3.1 Strength of side and end walls at covered wagons29

7.3.2 Strength of side walls at wagons with full opening roof (roller roof and hinged roof)30

7.3.3 Strength of side walls at high sided open wagons and wagons for the transport of heavy bulk goods.....31

7.3.4 Strength of the fixed side wall flaps at flat wagons and composite flat/high sided wagons.....33

7.4 Strength of the roofs33

7.5 Stresses imposed on the wagon floor by handling trolleys and road vehicles.....33

7.6 Attachment of containers and swap bodies33

7.6.1 General.....33

7.6.2 Strength requirements for the container/swap body retention devices34

7.7 Special wagons for the conveyance of containers34

7.7.1 Resistance tests on the securing equipment34

7.7.2 Wagons equipped with impact damping systems, test for checking the efficiency of the damping device.....34

7.8 Strength of side doors35

7.8.1 Strength of sliding doors at covered wagons35

7.8.2 Strength of the side doors at high-sided open wagons36

POLSKI KOMITET NORMALIZACYJNY 2022

7.9	Strength of drop sides and ends at flat wagons and interchangeable flat/open wagons	36
7.10	Strength of stanchions	37
7.10.1	General	37
7.10.2	Strength of the side stanchions.....	37
7.10.3	Strength of the end stanchions	37
7.11	Strength of lockable partitions of sliding wall wagons	37
8	Buffing impact testing.....	39
8.1	General	39
8.2	Implementation	39
8.2.1	General	39
8.2.2	Buffing tests with empty wagons	39
8.2.3	Buffing tests with loaded wagons	40
8.2.4	Procedure for the tests	41
8.2.5	Special case of wagons	43
8.3	Assessment of the results.....	44
9	Validation programme.....	45
9.1	Objective.....	45
9.2	Validation programme for new design of vehicle body structures – Testing	45
9.2.1	Tests specified in this standard.....	45
9.2.2	Fatigue testing	46
9.2.3	Service testing	46
9.3	Validation programme for evolved design of vehicle body structures	46
9.3.1	General	46
9.3.2	Structural analyses	46
9.3.3	Testing	46
Annex ZA (informative) Relationship between this European Standard and the Essential Requirements of EC Directive 2008/57/EC.....		48
Bibliography.....		50
