European foreword	5
1 Scope.....	6
2 Normative references.....	6
3 Terms and definitions	6
4 Technical specification	8
4.1 Scope.....	8
4.2 General requirements.....	8
4.3 Design load cases	8
4.4 Vehicle conditions and interfaces.....	9
4.5 Particular requirements	9
5 Verification of the design data	9
6 Validation and acceptance of the design	9
6.1 General.....	9
6.2 The validation plan	10
6.2.1 Content.....	10
6.2.2 Structural analysis.....	11
6.2.3 Static tests.....	12
6.2.4 Fatigue tests.....	12
6.2.5 Track tests.....	13
7 Quality requirements	14
Annex A (informative) Symbols and units used in the informative annexes	15
A.1 Forces	15
A.2 Accelerations.....	16
A.3 Masses	16
A.4 Other symbols and units	17
A.5 Coordinate system.....	17
A.6 Bogie classification.....	19
Annex B (informative) Load cases	20
Annex C (informative) Loads due to bogie running.....	22
C.1 General.....	22
C.2 Examples of loads for bogies of passenger rolling stock - categories B-I and B-II	23
C.2.1 Exceptional loads	23
C.2.2 Normal service loads	24
C.3 Examples of loads for freight bogies with a central pivot and two sidebearers - category B-V.....	24
C.3.1 Bogie types	24
C.3.2 Relationship of vertical forces	24
C.3.3 Exceptional loads	25
C.3.4 Normal service loads	26

C.4	Examples of loads for bogies of locomotives (with two bogies) - category B-VII.....	27
C.4.1	Exceptional loads.....	27
C.4.2	Normal service loads.....	28
C.5	Examples of loads for bogies of metro, rapid transit, light rail vehicles and trams - categories B-III and B-IV	28
C.5.1	Application.....	28
C.5.2	Load cases.....	28
C.5.3	General expressions for the basic load cases	29
Annex D (informative) Loads due to components attached to the bogie frame.....		31
D.1	General	31
D.2	Component inertia loads.....	31
D.2.1	Derivation.....	31
D.2.2	Design accelerations for equipment attached to the bogie frame.....	32
D.2.3	Design accelerations for equipment attached to the axlebox	32
D.3	Loads resulting from viscous dampers.....	32
D.4	Loads resulting from braking.....	33
D.5	Loads resulting from traction motors.....	33
D.6	Forces applied on anti-roll systems.....	33
Annex E (informative) Analysis methods and acceptance criteria.....		34
E.1	General	34
E.2	Loads	34
E.3	Analysis and acceptance	34
E.4	Structural acceptance criteria	34
E.4.1	Principle.....	34
E.4.2	Utilization	35
E.4.3	Safety factor	35
E.4.4	Material strength	36
Annex F (informative) Examples of static test programmes.....		41
F.1	General	41
F.2	Static test programme for bogies of passenger rolling stock with body supported directly to the sideframe (categories B-I and B-II).....	42
F.2.1	Tests under exceptional loads	42
F.2.2	Tests under normal service loads	42
F.3	Static test programme for bogies with central pivot and two sidebearers (category B-V).....	44
F.3.1	Bogie types.....	44
F.3.2	Tests under exceptional loads	44

F.3.3 Tests under normal service loads.....44

F.4 Static test programme for bogies of locomotives46

F.5 Static test programme for bogies of light rail vehicles and trams46

F.5.1 General.....46

F.5.2 Tests under exceptional loads46

F.5.3 Tests under normal service loads.....47

Annex G (informative) Examples of fatigue test programmes.....48

G.1 General.....48

G.2 Fatigue test programme for bogies with the body supported directly on the sideframes (categories B-I and B-II)49

G.3 Fatigue test programme for a freight bogie with a central pivot and two sidebearers (category B-V)52

G.3.1 General.....52

G.3.2 Vertical loads.....52

G.3.3 Transverse loads.....52

G.4 Fatigue test programme for locomotive bogies (category B-VII)54

G.5 Fatigue test programme for bogies of light rail vehicles and trams (category B-IV) .54

Annex ZA (informative) Relationship between this European Standard and the Essential Requirements of EU Directive 2016/797/EU aimed to be covered.....55
