

CONTENTS

INTRODUCTION.....	9
1. OPTIMISATION OF HUMAN FUNCTIONING IN THE CONTEMPORARY WORK ENVIRONMENT IN THE PERSPECTIVE OF WORK AND ORGANISATIONAL PSYCHOLOGY	15
1.1. Modern working environment of a human being	16
1.1.1. Physical working environment	16
1.1.1.1. Physical environment stressors.....	18
1.1.2. Social work environment	30
1.1.2.1. Content of work	30
1.1.2.2. Context of work	32
1.2. Diagnostics in the field of work and organisational psychology	36
1.2.1. Scope of the diagnosis	38
1.3. Example of a diagnostic package for workers carrying out difficult and dangerous work in industry	43
1.3.1. Construction, validation of the tool and stages of work on the tool	44
1.3.2. Analysis of psychometric properties of the tool	45
1.3.2.1. Description of the validation test	46
1.3.2.2. Analysis of the reliability of the tool and the discriminatory power of the test items	47
1.3.2.3. Average performance of the tool	52
1.3.2.4. Analysis of the tool's criterion accuracy mission	53
1.3.2.5. Analysis of the theoretical relevance of the tool	73
1.3.2.6. Test procedure and calculation of results	78
1.3.2.7. Stenium standards for subscales	79
1.3.2.8. Presentation of the diagnostic package	82
1.4. Bibliography	86
2. HUMAN IMPACT ON THE NATURAL ENVIRONMENT	92
2.1. Impact of human industrial activity on the natural environment – introduction	92
2.2. Human activity as a morphogenetic factor in the environment.....	95
2.3. Transformations of plant cover in post-industrial areas	95
2.4. Exploitation and processing of silver, lead and zinc ores	96
2.4.1. Toxic effects of heavy metals on plants	97
2.4.2. Metallophytes as an effect of adaptation to a metal-contaminated environment	97

2.5. Characteristics of areas with high metal content in the soil	99
2.5.1. Primary sites	100
2.5.2. Secondary sites	100
2.5.2.1. Mining exploration and exploitation areas	100
2.5.2.2. Ore washery heaps	109
2.5.2.3. Post-flotation heaps	113
2.5.2.4. Post-metallurgical heaps	114
2.5.3. Tertiary sites	116
2.6. Hard coal mining waste heaps – ecological conditions	119
2.6.1. Spontaneous plant cover of hard coal mining waste heaps	121
2.7. Traces of former industrial activities in environment – secondary plant cover	122
2.7.1. Calamine grasslands as the natural and cultural heritage	122
2.7.2. Forest regeneration in post-industrial areas	123
2.7.2.1. “Verona” calamine ore mine	125
2.7.2.2. “Hipolit” forest	131
2.8. Bibliography	134

3. ACQUISITION OF POST-INDUSTRIAL SITES FOR THE DEVELOPMENT OF RECREATION ENVIRONMENT IN THE REGION OF THE UPPER SILESIA AGGLOMERATION	141
3.1. Characteristic forms of post-industrial terrain	142
3.1.1. Excavations	142
3.1.1.1. Residues of silver and lead and iron ores mining	142
3.1.1.2. Residues of shallow coal mining	146
3.1.1.3. Residues of lignite mining	147
3.1.1.4. Inactive quarries	148
3.1.1.5. Inactive clay mines	150
3.1.1.6. Inactive sand mines	152
3.1.2. Spoil heaps	153
3.1.2.1. Coal mining heaps	153
3.1.2.2. Flotation heaps	156
3.1.2.3. Overburden heaps	158
3.1.3. Sunken and submerged lands	159
3.1.4. Transport system	162
3.1.4.1. Railway embankments and viaducts	162
3.1.4.2. Routes	163
3.2. Buildings excluded from production processes	163
3.2.1. Production and storage buildings	163
3.2.2. Office and administration buildings	164
3.2.3. Technical structures	165
3.2.3.1. Shaft towers	165
3.2.3.2. Water pressure towers	165
3.2.3.3. Retaining walls	166
3.3. Natural and landscape value of post-industrial areas	167
3.3.1. Biodiversity of the areas subject to secondary succession	167

3.3.2. Anthropogenic forms of greenery modelling.....	168
3.3.3. Viewing advantages	171
3.3.4. Landform.....	173
3.4. The recreational and utility value of the traces of former industrial use.....	175
3.4.1. Recreational availability and capacity of the post-industrial areas	175
3.4.2. Toxicity of soil with deposited material and its impact on the use and developing methods.....	176
3.4.3. Landform of the post-industrial area as value of utility.....	179
3.5. Participation of society in the processes of management of industrially degraded areas.....	184
3.5.1. Searching for functional solutions meeting social expectations.....	184
3.5.2. Post-implementation reactions of users	187
3.6. Industrial monuments trail as a mean of post-industrial objects transformation and use.....	189
3.6.1. System of recreational areas	189
3.6.1.1. Nodal objects	189
3.6.1.2. Open spaces	190
3.6.1.3. Routes of links	194
3.6.2. Aspect of post-industrial areas identity	195
3.6.2.1. <i>Genius loci</i> and its cultivation method	195
3.6.2.2. Cultural and environmental education.....	197
3.6.3. Pro-social activities at the reclaimed areas	199
3.6.3.1. Mass events.....	199
3.6.3.2. Healthy lifestyle	199
3.6.3.3. Health and therapeutic potential	199
3.6.3.4. Youth activation.....	200
3.6.3.5. Extreme sports environment.....	200
3.7. Summary.....	201
3.8. Bibliography	202
Abstract	208
