### Volume 1

**List of Contributors** *xi*

**Preface** *xiii*

### Part I Introduction 1

#### **1 Metal Oxides and Specific Functional Properties at the Nanoscale 3**

*Oliver Diwald*

- 1.1 A Cross-Sectional Topic in Materials Science and Technology 3
- 1.2 Metal Oxides: Bonding and Characteristic Features 5
- 1.3 Regimes of Size-Dependent Property Changes and Confinement Effects 5
- 1.4 Distribution of Nanoparticle Properties 7
- 1.5 Structure and Morphology 9
- 1.5.1 Confinement and Structural Disorder 9
- 1.5.2 Surface Free Energy Contributions and Metastability 11
- 1.5.3 Shape 13
- 1.6 Electronic Structure and Defects 15
- 1.6.1 Size-Dependent Defect Formation Energies and Their Impact on Surface Reactivity 17
- 1.7 Surface Chemistry 19
- 1.8 Metal Oxide Nanoparticle Ensembles as Dynamic Systems 21
- 1.9 Organization of This Book 22
- References 23

#### **2 Application of Metal Oxide Nanoparticles and their Economic Impact 29**

*Karl-Heinz Haas*

- 2.1 Introduction 29
- 2.1.1 Nanomaterials and Nanoobjects 29
- 2.1.2 Selection of Metal Oxide Nanoparticles 32
- 2.2 Scientific and Patent Landscape 33

2.3	Types of Metal Oxide Nanoparticles, Properties, and Application Overview	34
2.4	Use Forms of Metal Oxide Nanoparticles and Related Processing	40
2.4.1	Metal Oxide Nanoparticle Powders for Ceramics	40
2.4.2	Metal Oxide Nanoparticle Dispersions	40
2.4.3	Composites	41
2.4.3.1	Polymer Based Composites (Bulk and Coatings)	41
2.4.3.2	Metal Reinforcement	41
2.4.4	Combination with Powders of Micrometer Sized Particles	41
2.5	Application Fields of Metal Oxide Nanoparticles	42
2.5.1	Agriculture	42
2.5.2	Sensors and Analytics	42
2.5.3	Automotive	43
2.5.4	Biomedicine/Dental	43
2.5.4.1	Therapy	44
2.5.5	Catalysis	44
2.5.6	Consumer Products: Cosmetics, Food, Textiles	44
2.5.7	Construction	45
2.5.8	Electronics and Magnetism	45
2.5.9	Energy	46
2.5.10	Environment, Resource Efficiency, Processing	46
2.5.11	Oil Field Chemicals and Petroleum Industries	47
2.5.12	Optics/Optoelectronics and Photonics	47
2.6	Economic Impact	48
2.7	Conclusions and Outlook	51
	Abbreviations	53
	References	53

## Part II Particle Synthesis: Principles of Selected Bottom-up Strategies 67

3	<b>Nanoparticle Synthesis in the Gas Phase</b>	69
	<i>Matthias Niedermaier, Thomas Schwab, and Oliver Diwald</i>	
3.1	Introduction	69
3.2	Some Key Issues of Particle Formation in the Gas Phase and in Liquids	71
3.3	Gas Phase Chemistry, Particle Dynamics, and Agglomeration	73
3.4	Gas-to-Particle Conversion	77
3.4.1	Physical Processes	80
3.4.2	Chemical Processes	84
3.5	Particle-to-Particle Conversion	91
3.5.1	Approaches and Precursors	92
3.5.2	Particle Formation	94
3.5.3	Experimental Realization	95
3.5.4	Spray Pyrolysis and Flame-Assisted Spray Pyrolysis	96
3.6	Gas Phase Functionalization Approaches	98
	References	100

<b>4</b>	<b>Liquid-Phase Synthesis of Metal Oxide Nanoparticles</b>	<b>109</b>
	<i>Andrea Feinle and Nicola Hüsing</i>	
4.1	Introduction	109
4.2	General Aspects	110
4.2.1	Liquid-Phase Chemistry	110
4.2.2	Nucleation, Growth, and Crystallization	112
4.3	Synthetic Procedures	118
4.3.1	(Co)Precipitation	118
4.3.2	Sol–Gel Processing	121
4.3.3	Polyol-Mediated Synthesis/Pechini Method	124
4.3.4	Hot-Injection Method	126
4.3.5	Hydrothermal/Solvothermal Processing	127
4.3.6	Microwave-Assisted Synthesis	130
4.3.7	Sonication-Assisted Synthesis	133
4.3.8	Synthesis in Confined Spaces	136
4.4	Summary	142
	References	142
<b>5</b>	<b>Controlled Impurity Admixture: From Doped Systems to Composites</b>	<b>151</b>
	<i>Alessandro Lauria and Markus Niederberger</i>	
5.1	Introduction	151
5.2	Liquid-Phase Synthesis of Doped Metal Oxide Nanoparticles	154
5.3	Gas-Phase Synthesis of Doped Metal Oxide Nanoparticles	165
5.4	Solid-State Synthesis of Doped Metal Oxide Nanoparticles	168
5.5	Phase Segregation: Formation of Heterostructures	169
5.6	Core/Shell and Heteromultimers	173
5.7	Summary and Conclusions	175
	References	176
	<b>Part III Nanoparticle Formulation: A Selection of Processing and Application Routes</b>	<b>185</b>
<b>6</b>	<b>Colloidal Processing</b>	<b>187</b>
	<i>Thomas Berger</i>	
6.1	Towards Complex Shaped and Compositionally Well-Defined Ceramics: The Need for Colloidal Processing	187
6.2	Colloidal Processing Fundamentals	189
6.2.1	Interparticle Forces	189
6.2.1.1	Electric Double Layer Forces	192
6.2.1.2	Polymer-Induced Forces	194
6.2.2	Forming and Consolidation Techniques	194
6.2.2.1	Drained Casting Techniques	195
6.2.2.2	Tape-Casting Techniques	195
6.2.2.3	Constant Volume Techniques	195
6.2.2.4	Drying and Cracking	197
6.3	Rheology of Suspensions	197

- 6.4 Electrostatic Heteroaggregation of Metal Oxide Nanoparticles 202
  - 6.4.1 Modification of Colloidal Stability by Heteroaggregation 202
  - 6.4.2 Structure Evolution upon Heteroaggregation 204
  - 6.4.3 Rheological Properties of Heterocolloids 206
  - 6.4.4 Functional Properties of Heteroaggregates 207
- 6.5 Ice-Templating-Enabled Porous Ceramic Structures: Impact of Nanoparticles 210
  - 6.5.1 Ice-Templating of Colloidal Particles 210
  - 6.5.2 Capabilities of Metal Oxide Nanoparticles in Ice-Templating 212
    - 6.5.2.1 Optimization of the Mechanical Properties of Green Bodies and Sintered Parts 212
    - 6.5.2.2 Hierarchical Porosity and High Surface Area Materials 215
    - 6.5.2.3 Triple Phase Boundaries Between Percolating Solid Networks and a Hierarchical Pore System 217
- 6.6 From Colloidal Processing to Nanoparticle Assembly 219
  - Nomenclature 222
  - List of Abbreviations 224
  - References 224

**7 Fabrication of Metal Oxide Nanostructures by Materials Printing 229**

*Petr Dzik, Michal Vesely, and Oliver Diwald*

- 7.1 Introduction 229
- 7.2 Traditional Coating and Printing Techniques 231
- 7.3 Inkjet Printing 237
  - 7.3.1 A Brief Introduction into IJP Technology and the Process Scheme 237
  - 7.3.2 Functional Ink Formulation Issues 241
  - 7.3.3 Drop Generation 244
  - 7.3.4 Drop Interaction with the Substrate 245
  - 7.3.5 Drop Drying and Pattern Formation 247
  - 7.3.6 Printing Quality 250
  - 7.3.7 Equipment and Printing Devices 252
- 7.4 Printing of Metal Oxide Structures: The Materials Aspect 254
  - 7.4.1 Insulating Metal Oxides 254
  - 7.4.2 Semiconducting Metal Oxides 255
  - 7.4.3 Conducting Metal Oxides 256
- 7.5 Examples for Complex Printed Functional Structures: The Device Aspect 258
  - 7.5.1 Printed Photoelectrochemical Cell 258
  - 7.5.2 Flexible pH Sensors by Large Scale Layer-by-layer Inkjet Printing 261
- 7.6 Conclusions and Outlook 263
- References 265

**8 Nanoscale Sintering 271**

*Kathy Lu and Kaijie Ning*

- 8.1 Background 271
- 8.2 Challenges and New Aspects of Nanoparticle Material Sintering 272
- 8.3 Questionable Nature of Existing Sintering Theories 274
- 8.4 3D Reconstruction 276
  - 8.4.1 Focused Ion Beam Cross-Sectioning and SEM Imaging 276
  - 8.4.2 X-ray Microtomography 278

- 8.5 Functions of Pores 281
- 8.6 Sintering of Small Features 287
- 8.6.1 New Sintering Questions 287
- 8.6.2 Role of Pore Number in Small Feature Sintering 289
- 8.6.3 Grain Boundary Diffusion vs. Grain Boundary Migration in Small Feature Sintering 291
- 8.6.4 Ceramic Type Effect on Small Feature Sintering 293
- 8.6.5 Atmosphere Effect on Small Feature Sintering 294
- 8.7 Summary 297
- Acknowledgment 297
- References 297

## Part IV Metal Oxide Nanoparticle Characterization at Different Length Scales 303

- 9 **Structure: Scattering Techniques** 305
  - Günther J. Redhammer*
  - 9.1 Introduction 305
  - 9.1.1 Scattering and Diffraction 306
  - 9.1.2 What to Learn from a Diffraction Experiment? 307
  - 9.2 Theoretical Background 310
  - 9.2.1 Crystal Lattice, Planes, and Bragg's Law 311
  - 9.2.1.1 Crystal Planes and Interplanar Distance 311
  - 9.2.1.2 The Reciprocal Lattice 312
  - 9.2.1.3 Bragg's Law 313
  - 9.2.2 The Intensity of a Bragg Peak 315
  - 9.2.3 The Profile of a Bragg Peak 317
  - 9.2.3.1 Instrumental Broadening 318
  - 9.2.3.2 Sample Broadening 319
  - 9.2.3.3 Analytical Description of Peak Shapes 321
  - 9.3 Experimental Setup 323
  - 9.3.1 Single vs. Polycrystalline Samples 323
  - 9.3.2 Powder Diffraction Methods 325
  - 9.3.2.1 Reflection Geometry 325
  - 9.3.2.2 Transmission Geometry 327
  - 9.3.2.3 Grazing Incident Diffraction (GID) 328
  - 9.3.2.4 Sample Preparation 330
  - 9.4 Some Selected Applications 331
  - 9.4.1 Qualitative Phase Analysis 331
  - 9.4.2 Quantitative Phase Analysis – The Rietveld Method 333
  - 9.4.3 Microstructure Analysis: Size and Strain 335
  - 9.5 X-ray Diffraction on Magnetite Nanoparticles 338
  - 9.6 Conclusion 340
  - Nomenclature 341
  - List of Abbreviations 342
  - References 343

<b>10</b>	<b>Morphology, Structure, and Chemical Composition: Transmission Electron Microscopy and Elemental Analysis</b>	<b>349</b>
	<i>Joanna Grybos', Paulina Indyka, and Zbigniew Sojka</i>	
10.1	Size, Shape, and Composition of Oxide Nanoparticles	349
10.2	Interaction of the Incident Electrons with a Specimen	350
10.3	The Transmission Electron Microscope	351
10.3.1	Microscope Design and Operation Modes	351
10.3.2	Contrast Type and Image Formation	355
10.3.3	Resolution Limits of TEM Images	359
10.4	Imaging and Analysis of Morphology	360
10.4.1	Sample Preparation	360
10.4.2	Shape Retrieving	361
10.4.2.1	Aligned Nanocrystals	362
10.4.2.2	Randomly Oriented Nanocrystals	364
10.4.3	Particle Size Determination	366
10.5	Crystallographic Phase Identification – Electron Diffraction	367
10.5.1	Bragg Condition – Kinematical and Dynamical Diffraction	368
10.5.2	Selected Area Electron Diffraction (SAED)	369
10.5.3	Nanodiffraction	370
10.6	Chemical Composition Mapping – EDX and EELS Nanospectroscopy	371
10.6.1	Correlating Image with Spectroscopic EDX and EELS Information – Data Cubes	373
10.6.2	Composition Mapping with EDX Spectroscopy	374
10.6.3	Chemical State Imaging with EELS Spectroscopy	377
	Nomenclature	378
	List of Abbreviations	380
	References	381
<b>11</b>	<b>Electronic and Chemical Properties: X-Ray Absorption and Photoemission</b>	<b>383</b>
	<i>Paola Dolcet and Silvia Gross</i>	
11.1	Introduction and Scope of the Chapter	383
11.2	Basics of X-rays – Matter Interaction	383
11.3	X-Ray Photoelectron Spectroscopy (XPS)	386
11.3.1	Theoretical Background	386
11.3.2	Features and Analysis of X-ray Photoelectron Spectra	391
11.3.3	XPS Investigation of Metal Oxide Nanoparticles and Metal Oxide Colloidal Suspensions	396
11.3.3.1	Solid–Liquid Interfaces and Nanoparticles in Suspension: Liquid-Jet and Ambient Pressure XPS	397
11.3.3.2	Valence Band XPS for the Investigation of Oxides	401
11.3.4	XPS Spectrometer Equipment: Components and Sources	402
11.3.5	Performing XPS Experiments	403
11.3.5.1	Planning of the Analysis and Sample Preparation	403
11.3.6	XPS Qualitative and Quantitative Data Analysis and Fitting	405
11.4	X-ray Absorption Spectroscopy (XAS)	406
11.4.1	X-ray Absorption Theory	406
11.4.2	XAS for the Investigation of Metal Oxide Nanoparticles	412

11.4.2.1	Materials for Oxygen Evolution Reaction	415
11.4.2.2	Point Defects and Ferromagnetism	415
11.4.3	Anatomy of a XAS Beamline	417
11.4.4	The XAS Experiment: Obtaining Beamtime, Sample Preparation	417
11.5	Case Studies for the Combined Use of XPS and XAS in Oxide Analysis	420
11.5.1	XPS and XAS analysis of pure, doped, and mixed oxides and of oxide interfaces	421
11.5.2	XPS and XAS analysis of catalysts	424
11.6	Concluding Remarks: Complementarities and Differences of XPS and XAS	428
	List of Abbreviations	428
	References	429

## Volume 2

**List of Contributors** xiii

**Preface** xv

12	<b>Optical Properties: UV/Vis Diffuse Reflectance Spectroscopy and Photoluminescence</b>	435
	<i>Thomas Berger and Annette Trunschke</i>	
13	<b>Vibrational Spectroscopies</b>	483
	<i>Christian Hess</i>	
14	<b>Solid State Magnetic Resonance Spectroscopy of Metal Oxide Nanoparticles</b>	513
